Boring/Well GM-47 Page 3 of 5

Prepared by Ted Powell and Rob

From	To	Sample/Core Depth (feet below land surface)	Core Recovery (feet)	OVA/OVM	Sample/Core Description
					4.0-5.0': Sand. Brown (7.5 YR 5/4) very fine with silt, well sorted, loose to
					medium dense, slightly moist, at clay/sand content a thin lense of gravel ¼ to 1
					inch, angular to subrounded.
25	30		5	3.5-15/1.9-	0-2.0': Slough.
				3.2	2.0-5.0': Sand, red brown (5 YR 5/4) very fine with silt, well sorted, slighty
					moist, medium dense.
30	35		5	2-7.5/.8-2.1	0-2.0': Sand. As above, but red yellow (7.5 YR 5/6) silt, content coarsens toward
					bottom and color goes to red brown (7.5 YR 5/4) as moisture content and silt
					contact increase.
					2.0-5.0': Sand. Very fine, silty, brown (7.5 YR 4/4) moist at top of section to
					saturated at bottom, very dense, moderate well to well sorted.
35	40		5	4.5-12/0	0-2.5': Sand. Very fine, silty, as above at 0.5 feet, a 2 inch silt lense, some very fine
					sand, very dense to stiff, moist, brown (7.5 YR 5/3).
					2.5-5.0': Sand. Brown (7.5 YR 5/4) fine with very fine, variable silt, medium
					dense to dense, very moist, moderately well sorted.
40	45		5	2.25-16/0	0-0.5': Sand. As above.
					0.5-4.0': Silt. Brown (7.5 YR 4/4) some very fine sand, trace clay, in part, soft to
					medium stiff, moist. At 3 to 3.5 feet silt with several small ¼ to 1 inch thick clay
					lenses, clay red brown (2.5 YR 4/4) soft, very slight effervescent, fissile, plastic.
					4.0-5.0': Silt. Very fine, sandy, grading to very fine silt sand at bottom of sample,
					red brown (5 YR 4/4) dense, moderately well sorted, moist to very moist.
45	50		5	1.5-4.5/0	0-0.5': Sand. Very fine silty, to very fine sand silt, as above.
					0.5-5.0': Silt. Red brown (5 YR 4/4) some very fine sand in top 2 feet grading to trace
					very fine sand at bottom, moderate well sorted, stiff 3.5. At 3 to 3.5 feet some
					clay, yellow red (5 YR 4/6) soft, platy, slightly effervescent, lenses are approximately
					¼ inch thick.
50	55		5	1.5-3.5/0	Silt. Color as above, very homogenous, very stiff to hard (3.5 to >4.0), trace
					clay in matrix.
					18:50 stop drilling for the day.

35	40	5	2-4.5/.1-.2	Sand. As above. Very fine with silt, saturated.
40	45	5	3.5-5.5/0-.3	Sand. Very fine with silt, grading to very fine silty sand. At approximately 1.5 feet
				a ¼ to ½ inch clay lense, red (2.5 YR 4/6) soft (1.0) platy, moderately plastic, mildly
				effervescent, medium dense to dense in bottom of sample. Several thin (<1 mm)
				black very fine sandy silt laminae from 2.0 to 3.5 feet.
45	50	5	2.5-5.5/0-1.4	Sand. Very fine with silt, color as above, medium dense, moderately well sorted,
				saturated.
50	55	5	5-9/.8-1.2	Sand. As above. Very fine.
55	60	5	2-4/0-.8	Sand. Red brown (5 YR 4/4) very fine silty, saturated, dense to very dense, moderately
				well sorted.
60	65	5	5-9/.8-1.2	0-0.5': Sand. As above. Very fine silty.
				0.5-1.5': Silt. Color, as above, medium stiff (1.25 to 1.75), trace very fine sand
				throughout, trace clay inclusions (¼ to 3/4 inch diameter) clay, red (2.5 YR 4/4)
				mildly effervescent, blocky, soft, plastic.
				1.5-2.5': Sand. Red brown (5 YR 4/4), very fine silty, with small (.5 to 1 inch) lense of
				silt, slight to medium stiff (1.75) sandy in part. Sand dense to very dense,
				very moist to wet.
				2.5-5.0': Sand. As above. Very fine silty.
65	70	5	2-3/0-.1	Silt. Red brown (5 YR 5/3) variable clay, trace very fine sand, soft to medium
				stiff (.5 to 1.75) plastic where clay content increases. Isolated clay inclusions,
				red (10 YR 4/6) fissile, stiff (3.0) strongly effervescent.

				effervescent, non to slightly plastic, moist.
55	60	5	10-20/	Interbedded silt and clay. Clay, red brown (2.5 YR 5/4), hard, slightly moist, beds
			0-38.2	from 2 mm to 20 mm thick, strongly effervescent. Silt, red brown (5 YR 5/3), stiff,
				slightly moist.
60	65	5	10-22/	0-1.0': Silt and clay, as above.
			23.2-101	1.0-4.0': Sand. Yellow red (5 YR 4/6), very fine to fine, very silty gradational to
				very sandy silt in part, wet to saturated, trace clay lenses and inclusions, thin
				(1 to 3 mm) red brown (2.5 YR 5/4), plastic.
65	70	5	20-1,000/	0.0-2.5': Clay with thin band of silt and grading to silt. Clay: red (2.5 YR 4/6),
			2.7-73	fissile, stiff (3.0) strongly effervescent. Silt: brown (7.5 YR 4/3), homogenous,
				stiff (3.0), very moist.
				2.5-5.0': Sand. Red brown (5 YR 5/4), fine, trace medium, some silt, saturated,
				moderately dense, moderate to well sorted.
70	75	5	1,500-	Interbedded, sand and clay with variable silt. From 0.0 to 2.0 feet thinly bedded
			10,000/26.5	clay (approximately 2 mm) with (1 mm) beds of sand. Pink (7.5 YR 7/4) sand fine
			-33	to medium, trace coarse, dry to slightly moist, loose. Clay: soft, moderately plastic,
				sandy, trace silt, moderately effervescent. From 2 to 5 feet: sand lenses up to 6 inches
				thick, fine to medium some coarse, trace very coarse, silty, very poorly sorted,
				saturated, medium density. Clay as above, but grades to moderate stiffness.
75	80	5	5,000-	Sand. Brown (7.5 YR 5/3) to red gray (5 YR 5/2), very fine with silt, gradational to
			>10,000/	very silty in part, very moist to wet, abundant gas vesicles, loose to medium
			50-700	density, moderate sorting.
80	85	5	>10,000/	Sand. As above, saturated to very moist, very silty, in part gradational to very fine

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	FID/PID (ppm)	Sample/Core Description
25	30	5	-8 - -4.5/	0-3.5' Gravel: Brown (10 YR 4/3) up to 3" round to subangular, loose, some silt and
			-0.7 - 1.1	very fine sand, wet (from drilling) no odor, grades into next unit for 0.5'.
				3.5-5.0' Sand: Yellowish red (5 YR 5/2), very fine to fine, trace to some silt, trace
				medium to coarse grain, trace gravel up to 3/4" subround to round, loose,
				no odor.
30	35	5	-4.5 - 57.8/	0-5.0' Sand: As above, at 4' crushed rock fragments, trace to some black/green
			-0.2 - 2.91	staining.
35	40	3.5	-2.2 - -4.5/	0-1.5' Sand: Brown (7.5 YR 5/4), mainly fine with some medium, some gravel, up to
			-0.38 -	2" somewhat poorly sorted, subround to subangular, some silt, somewhat sticky,
			-0.54	wet, no odor.
				1.5-3.5' Sand: Strong brown (7.5 YR 4/6), very fine to fine grain trace medium to
				coarse and gravel to 3" subround, trace silt loose fairly well sorted, moist.
40	45	5	11.11-3.04/	0-4.0' Sand: As above grades into.
			1.11-1.27	4.0-5.0' Sand: Brown (7.5 YR 5/4), very fine to fine grain with some silt (increasing
				silt), somewhat crumbly, moist, no odor.
45	50	5	-7.03- -6.47/	0-2.0' Sand: Strong brown (7.5 YR 4/6), predominately fine grain, some very fine to
			0.30 - 0.40	medium, trace coarse, some silt, trace to some gravel to 2", subround to subangular,
				trace clay in nodules, somewhat sticky, wet, poorly sorted, no odor.
				2.0-4.0' Sand: Color as above, fine grain, some very fine to medium, well sorted,
				wet, no odor.
				4.0-5.0' Sand: Brown (7.5 YR 4/2), medium to coarse grain, some gravel to 1"
				subround to subangular, poorly sorted, many coarse grain is black platy grains
				wet, no odor, some rust color staining at 49'.
50	55	5	-10 - -9/	0-5.0' Sand: Brown (7.5 YR 4/4), fine grain, some very fine to coarse, trace to some
			0.64 - 0.81	silt and clay, trace gravel up to 3" subround to subangular, somewhat loose and
				somewhat sticky, somewhat poorly sorted, wet, no odor, well sorted sand medium
				grain seam 2" thick at 51'.
55	60	5	-12 - -10/	0-3.0' Sand: As above.
			0.51 - 0.74	3.0-5.0' Sand: As above, with intermixed areas of predominately medium sand,
				and gravel to 4".
60	65	5	-2.25 -	0-1.5' Sand: As above (3-5).
			-1.25/1.16 -	1.5-2.3' Silt: Color as above, grainy, crumbly, noncohesive and no plastic, wet, no
			1.42	odor.
				2.3-3.2': Sand brown (7.5 YR 4/6) fine grain well sorted, wet, no odor.
				3.2-5.0' Sand: As above (55 to 60', 3-5').
65	70	5	8 - -4.85/	0-3.0' Sand: Brown (7.5 YR 4/4) very fine to fine, loose, well sorted, wet, no odor.
			0-49 - 1.72	3.0-5.0': Sand, color as above, very fine to fine, loose, well sorted some to trace

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	FID/PID (ppm)	Sample/Core Description
				silt, wet, no odor.
70	75	5	-9 - -8/	0-4.0' Sand: As above with trace to some silt.
			1.15 - 1.18	4.0-5.0' Sand, color as above, mainly fine to trace medium and very fine,
				loose, well sorted, wet, no odor trace clay nodules red (2.5 YR 4/6).
75	80	5.0	-12 - 10/	0-5.0' Sand: As above increasing clay nodules down section.
			0.64 - 0.72	
80	85	5	-5 - -4/	0-2.0' Sand: As above, brown (2.5 YR 4/4), increasing clay nodules.
			1.34-1.52	2.0-5.0' Silt: Brown (7.5 YR 4/4) and silt down section grainy, crumbly, some clay
				red (7.5 YR 4/6) inclusions plastic and cohesive, trace fine sand in lenses, inclusions
				have platy appearance, throughout, wet to moist, no odor.
85	90	5	12 - -8.08/	0-3.5' Sandy silt, brown (7.5 YR 4/4), sand very fine, silt is grainy to smooth,
			22 - 1.5	saturated, no odor.
				3.5-5.0' Silt: Color as above, trace very fine sand, silt is grainy, somewhat crumbly,
				at first, moist to wet, no odor.
90	95	5	-11 - -9/	0-0.4' Silt: As above.
			2.41 - 2.23	0.4-5.0' Sand: Brown (7.5 YR 5/4), fine to medium grain, trace coarse, trace gravel
				to 1" subround to angular, somewhat well sorted, loose, wet, no odor, from 1.4 -
				2.0 predominately medium coarse grain with some gravel, trace rust color staining/
				coloring at 0.4-0.8'.
95	100	5	17-16/	0-3.0' Sand: As above.
			2.76-2.85	3.0-5.0' Sand: Brown (7.5 YR 5/4), fine to medium grain, well sorted, loose, wet,
				no odor.
100	105	5	-2 - -3/	0-1.0' Sand: As above, predominately fine grain (fining) grading into section below.
			2.95-3.03	1.0-5.0': Silt and Sand: Intermixed, brown (7.5 YR 4/4), sand brown (7.5 YR 5/4),
				silt is in nodules and is crumbly to soft, nongrainy and smooth with grayish to
				reddish/pink banding, sand is intermixed throughout silt nodules, fine to coarse
				grain, predominately fine to medium grain, loose, trace gravel to 1" subround to
				subangular, over all wet and no odor.
105	110	5	174 - 131/	0-1.5' Slough: Silt, sand and gravel.
			2.2 - 2.3	1.5-3.0' Sand: Dark brown (7.5 YR 3/4), fine grain some very fine, some silt, trace
				gravel up to 1" subround, saturated, no odor.
				3.0-3.7' Sand: Color as above, fine grain, interbedded with silt, grainy, bed are
				1/4 to 1/2" thick, wet, no odor.
				3.7-5.0' Sand: Dark brown (7.5 YR 3/4), predominately medium grain with very
				fine to coarse, trace gravel to 1" angular to subround, loose, wet, no odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	FID/PID (ppm)	Sample/Core Description
110	115	5	357 - 390/	0-1.0' Sand: As above.
			3.5 - 3.4	1.0-3.5' Sand: Brown (7.5 YR 5/3), fine to medium grain, loose, wet, no odor,
				interfingering contact with section below.
				3.5-5.0' Sand: Color as above, dark brown (7.5 YR 3/2), fine grain, loose with some
				to much silt in nodules, silt is somewhat crumbly, grainy to smooth, wet, no odor.
115	120	5	55 - 977/	0-2.0' Sand: As above and silt nodules, slight odor.
			2.08-2.40	2.0-5.0' Silt: Brown (7.5 YR 4/3), some grainy some smooth, some very fine sand in
				lenses, somewhat crumbly at first to smooth, trace fine sand in lenses, wet, odor.
120	125	5	178-187/	0-1.8' Silt: Brown (7.5 YR 4/3) smooth to grainy, trace to some very fine sand,
			2.75 - 3.95	somewhat loose to somwhat crumbly, moist, odor.
				1.8-3.1' Silt: Brown (7.5 YR 4/3) smooth to grainy, trace to some very fine sand,
				somewhat loose to somewhat crumbly, some clay inclusions reddish brown
				(5 YR 4/4), hard, platy at first, plastic and cohesive when worked,overall hard, moist
				to wet, no odor (approximately 20 percent clay inclusions.
				3.1-3.4' Sand: Fine to medium grain in lense but not continuous across core,
				silt as above also brown (7.5 YR 4/4), loose, moist to wet, no odor.
				3.4-5.0' Silt: With clay inclusions as above, increased amount of clay (approximately
				50 percent) comes up with no recovery, send back with tooth/trap to attempt
				to retrieve.
125	145	0		No recovery, loose sands.
145	150	5	.04 - 7.9/	0-5.0' Sand: Brown (7.5 YR 5/3) fine to medium grain, predominately fine grain,
			-4.42 -	trace coarse gain, trace silt, trace gravel up to 1.5" subround to round, loose,
			-4.49	wet, no odor, somewhat sorted.
150	155	5	7.3 - 10/	0-3.0' Sand: As above.
			-3.51 -	3.0-5.0' Sand: Color as above, fine to medium, predominately fine, some silt and
			-3.98	clay in nodules, trace to some gravel up to 2.5" subround to subangular, wet,
				no odor.
155	160	5	10.6-38/	0-0.5' Sand: As above, silt to clay in nodules, trace to some gravel up to 2.5"
			-2.26 -	subround to subangular, wet, no odor.
			-3.20	
160	165			0.5-2.0' Silt: Brown (7.5 YR 4/3), smooth to grainy, laminated, crumbly at first to
				soft, trace to some clay, wet, no odor, trace gravel to 1" subround to subangular.
				2.0-3.0' Sand: Dark brown (7.5 YR 3/3), fine to medium grain, loose, trace coarse,
				trace silt, no nodules, wet, no odor.
				3.0-3.5' Silt/Clay: Dark brown (7.5 YR 3/3) and sand (fine to medium), sticky,
				somewhat crumbly, nonplastic, mainly silt/clay and sand give it grainy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	FID/PID (ppm)	Sample/Core Description
				appearance, wet to moist, no odor.
				3.5 - 4.0' Sand: Brown (7.5 YR 4/3), fine grain, well sorted, loose, wet, no odor.
				4.0-5.0' Sand and Gravel: Dark brown (7.5 YR 3/3) with silt and clay, sand very
				fine to coarse, gravel up to 2", rounded to subangular, silt and clay holds
				grain together, red/brown/gray/green strong colorations/mottling, very poorly
				sorted, wet, no odor.
165	170	5	7.3 - 10.15/	0-3.5' Sand and Gravel: Coarse sand predominately, silt and clay as above grading
			-3.08 -	over 1' into section below.
			-4.41	3.5-5.0' Sand: Color as above, sand fine to coarse, mainly medium grain, much
				gravel up to 2" angular to subround, trace silt, poorly sorted, wet, no odor.
170	175	5	11.3 - 10.7/	0-2.0' Sand: As above.
			3.86 - 4.38	2.0-5.0' Sand: As above, with silt, grainy to smooth on outside of core.
175	180	5	27.38 - 36/	0-1.5' Sand/Gravel/Silt: Mixture, saturated from drill fluids, sand fine to
			3.08-3.71	coarse, silt grainy to smooth, and gravel up to 2" subround to subangular,
				saturated, no odor.
				1.5-2.5' Sand and Gravel: Sand coarse, predominately coarse, some medium,
				trace gravel mostly 1/2 to 3/4" up to 3" subround to subangular, somewhat
				sorted, saturated, grades over 1/2' into section below.
				2.5-4.0': Alternating layers (up to 2" thick) of fine to medium grain sand
				brown (7.5 YR 4/3), well sorted, loose and silty sand, dark gray (7.5 4/1) fine to
				very fine with trace medium, loose saturated, no odor.
				4.0-5.0' Silty Clay: Dark greenish gray (Gley 10 Y 4/1), somewhat plastic and
				cohesive, trace sand fine to medium, trace gravel up to 2" round to subround,
				wet, no odor, at 180-5" core of phyllite had rock with white and red veins.
180	190			Phyllite hard rock core, white and red veins.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	145	0		Blind drill.
145	150	5	0.10-1.56/	0-0.3' Silt and Clay: Reddish brown (5 YR 4/4), firm and hard, HP >4.0, crumbly
			285-1100	at first, but cohesive and plastic when worked, moist, slight odor.
				0.3-1.0' Sand: Brown (7.5 YR 5/4), trace medium, trace subround to subangular
				gravel to 1.0", fine grained, grading into 1-3', well sorted, loose, wet, odor.
				1.0-3.0' Sand: Color as above, trace coarse, trace subround to subangular gravel
				to 2-5", trace fine, medium grained, loose, somewhat sorted, wet, odor.
				3.0-5.0' Sand: Brown (7.5 YR 4/4), some silt, trace coarse and medium sand,
				subround to subangular gravel to 1", very fine to fine, somewhat loose, wet,
				strong odor.
150	155	5	6.51-1.62/	0-4.0' Sand: Brown (7.5 YR 4/4) some to much silt, brown (7.5 YR 4/3), mainly
			2400-3100	in lenses up to 1" thick, silt is smooth, crumbly, at times has trace to some clay
				making it somewhat cohesive and somewhat plastic, very fine to fine, somewhat
				well sorted, some black staining starting at 3', wet, odor.
				4.0-5.0' Silt: Brown (7.5 YR 4/4), smooth very slight cohesive to crumbly, grainy
				in places, clay laminations layered with silt yellowish red (5 YR 4/6), some black
				staining, cohesive and plastic, platy appearance.
155	160	5	2.27-2.62/	0-5.0' Silt: Dark brown (7.5 YR 3/3), smooth, noncohesive and nonplastic, grainy
			5090-14500	in places, at 4.8' some clay lenses give it a somewhat cohesive/plastic texture,
				some dark gray to black staining throughout, wet, odor.
160	165	5	3.79-4.56/	0-5.0' Silt: Overall grainy and crumbly, smooth in places, some clay lenses
			12700-16000	(<mm's in thickens) give it a more red appearance/color, noncohesive,
				nonplastic, wet, odor.
165	175	5	.97-1.11/	0-5.0' Silt: Brown (7.5 YR 4/4), trace to some clayey silt to silty clay lenses reddish
			18300-30030	brown (5 YR 4/4), grainy to smooth, somewhat crumbly, trace dark grayish
				staining, has appearance of popped vesicles throughout, wet, slight odor.

				loose, wet, slight odor.
100	105	5	0.52-0.68/	0-5.0' Sand: Color as above, from 3-3.7 silty sand, silt smooth to grainy, sand very
			128-137	fine to fine, color as above, trace very fine, trace silt lenses (hard silt up to 5 mm
				thick), fine, very well sorted, wet, some odor.
105	110	5	0.79-1.29/	0-5.0' Sand: Brown (7.5 YR 4/4), some areas of some silt, grainy, progressively
			927-1038	grades to mainly very fine at 4-5', trace black staining, very fine to fine grain, very
				well sorted, loose, wet, odor,
110	115	5.0	0.08-4.83/	0-4.0' Silt: Dark brown (10 YR 3/3), clay inclusions/beds up to 1.75" thick, brown
			158-1662	(7.5 YR 3/4), some to trace grayish staining at 4.0', smooth to somewhat grainy,
				somewhat firm, fissile/platey in appearance, slight cohesive/plastic, wet, odor.
				4.0-5.0' Silt: Dark brown (10 YR 2/3), grainy, hard to crumbly, moist to wet, odor.
115	120	5	2.82-3.95/	0-3.0' Silt: Brown (7.5 YR 4/3), smooth to slightly grainy, crumbly, wet, slight odor.
			282-418	3.0-5.0' Silt: as above but less grainy, with clay conclusions/lenses up to 1" thick,
				platy/fissile in appearance, not very cohesive but somewhat plastic, wet, slight odor.
120	125	5.0	4.02-5.47/	0-2.0' Silt: As above (3-5), HP = 2.5.
			552-771	2.0-3.5' Silty Clay: Dark brown (7.5 YR 3/4), very hard and firm, cohesive and plastic
				when worked, brittle at first, moist, no odor. HP >4.0.
				3.5-5.0' Silty Clay: Trace coarse to fine, gravel to 1/4" (possible drop stones), soft,
				cohesive and plastic, smooth moist, no odor.
125	130	5	4.57-7.89/	0-3.0' Silty Clay: As above (2-3.5), very hard and firm.
			641-1407	3.0-5.0' Silt: Brown (7.5 YR 4/3), trace to some clay, smooth to somewhat grainy,
				in spaces soft to crumbly to sticky dependent on water and clay content,
				wet, some odor.
130	135	5	4.78-7.11/	0-5.0' Silt: Brown (7.5 YR 4/3), trace to some clay inclusions, clay hard cohesive/
			804-1900	plastic when worked, varies from smooth to grainy, crumbly to somewhat loose.
135	140	5	-3.81-4.65/	0-1.0' Sand: Brown (7.5 YR 5/4), some to much silt, silty clay lenses at 1',
			16-176	cohesive and plastic, fine, somewhat sorted, wet, slight odor.
				1.0-5.0' Sand: Brown (7.5 YR 5/4), trace silty clay lenses as above, fine, very well
				sorted, loose, wet, no odor.
140	145	5	-4.29- -2.87/	0-3.0' Sand: Color as above, fine, very well sorted, loose, wet, slight odor.
			196-442	3.0-5.0' Sand: As above with trace medium to coarse sand.
145	150	5	-3.38- -4.40/	0-2.5' Sand: Brown (7.5 YR 5/3), trace coarse, fine to medium, somewhat
			95-189	loose, grading into section below, wet.
				2.5-3.5' Sand: Color as above, some fine, trace coarse grain, trace round to
				subangular gravel to 2.5", medium, loose, wet, slight odor.
				3.5-5.0' Silty Sand: Brown (7.5 YR 4/4), very fine to fine, well sorted,
				somewhat loose to crumbly, wet, odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
150	155	5	4.22- -2.57/	0-0.8' Silt: Brown (7.5 YR 4/3), some very fine sand, crumbly, some dark staining
			638-2500	smooth, slightly grainy, wet, odor.
				0.8-3.0' Sand: Brown (7.5 YR 4/4), some silt in lenses, very fine to fine, grading into
				section below, well sorted, loose to somewhat loose, wet, odor.
				3.0-4.6' Sand: As above, some to much silt, very fine, wet, odor.
				4.6-5.0' Silt: Dark brown (7.5 YR 3/3), some very fine sand, black staining, crumbly,
				smooth to somewhat grainy, wet, strong odor.
155	175	2.5	1.03-2.05/	0-2.5' Silty Clay: Silt dark brown (7.5 YR 3/4), clay reddish brown (5 YR 4/4), clay is
			2900-4600	hard and crumbly, silt is smooth, both somewhat cohesive and somewhat plastic
				when worked, saturated, strong odor.
175	180	5	4.2-5.3/	0-5.0' Silt: Dark brown (7.5 YR 3/4), to clay silt or silt in some to much clay, clay
			2600-5200	in lenses reddish brown (5 YR 4/4), overall somewhat cohesive/platy, somewhat
				sticky, predominately platy to fissile in appearance, cohesive to plastic when
				worked, wet, strong odor, HP <0.5.
180	155	5.0	4.8-6.03/	0-5.0' Silt: As above, color dark reddish gray (5 YR 4/2) and dark reddish brown
			7010-7100	(5 YR 4/3), color banding between throughout (varving or smeared by drilling),
				becomes somewhat crumbly when worked at 184.6-185.2, very much clay
				lenses/pods.
185	190	5	3.95-4.99/	0-5.0' Silt: As above, Intervals of very much clay lenses from 188.5 - 190', very
			6900-11300	crumbly at first becoming somewhat cohesive/plastic when worked, some grayish
				black staining in layers.
190	195	5	3.76-4.15/	0-5.0' Silt: As above, clay lenses becoming more crumbly when worked. HP = 1.5.
			2350-2600	
195	200	5	2.41-3.22/	0-5.0' Silt: Dark reddish brown (5 YR 3/3), some to much clay, somewhat cohesive
			117-130	and somewhat plastic, smooth, HP 1-1.5, somewhat firm, lenses clay, hard, fissile to
				platy in appearance, dark reddish brown (5 YR 3/4) in lenses or pods up to 4" thick,
				very hard/firm HP >4.0 (thicker clays from 1.5-2 and 2.5-3.2'), wet, slight odor.
200	205	5	2.55-3.6/	0-5.0' Silt: As above, with clay lenses/pods at 0.2-0.8 as above (very hard HP >4.0),
			27.1-74	silt progressively changing from somewhat cohesive and somewhat plastic
				to crumbly down section, also less clay lenses down section.
205	210	5	4.27-4.34/	0-2.0' Silt: As above.
			42.3-66.6	2.0-3.0' Clay: Dark reddish brown (5 YR 3/4), some silt, very hard HP = >4.0, firm,
				mostly crumbly to slightly cohesive.
				3.0-5.0' Silt: As above, less clay and more crumbly, more organic-like.
210	215	5	3.84-3.93/	0-3.0' Silt: As above, less clay but still some in lenses.
			17.7-18.2	3.0-4.8' Silt: Reddish brown (5 YR 4/3), trace to no clay, smooth, crumbly,
				moist to wet, no odor.

Sample/Core Log (continued)

Boring/Well GM-81B

Prepared by Paul Lenaker/Lori Schmidt

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				4.8-5.0' Clay: See below
215	220	5	2.13-2.25/	0-1.0' Clay: As above (205-210/2-3'), some thin lenses silt layers within.
			1.76-2.19	1.0-5.0' Silt: Brown (7.5 YR 4/3), trace to some clay, clay also in lenses/pods
				reddish brown (5 YR 4/4), smooth, somewhat cohesive/plastic.
220	225	5	2.48-2.60/	0-1.5' Silt: As above.
			71.7-272	1.5-5.0' Silt: Reddish brown (7.5 YR 4/3), trace clay, slight cohesive/slight plastic
				clay lenses not observed, somewhat grainy but smooth, HP <1.0, wet, no odor.
225	230	5	2.50-3.14/	0-3.0' Silt: As above, clay lenses/pods from 0.8-1.4'.
			1.81-370	3.0-3.5' Sand: Brown (7.5 YR 4/3), fine to very fine, well sorted, loose, wet, no
				odor.
				3.5-5.0' Silt: As above with clay lenses, color banding of reddish brown (5 YR 4/3)
				and brown (7.5 YR 4/2).
230	235	5	2.84-4.25/	0-5.0' Interbeds of silt: As above, with color banding, crumbly, nonplastic/non-
			6.97-7.92	cohesive clay lenses (only from 3-5') as above, HP 3.5, sand brown (7.5 YR 5/3), very
				fine grain to grainy silt, interbeds up to 2" thick and twisted likely due to drilling.
235	240	5	2.65-2.75/	0-5.0' Silt: As above, with clay lenses at 1.5' from 3.8-4.7', very fine silty sand/
			8.01-26.38	very fine sandy silt lenses at 0.5' trace throughout, sandy silt is grainy,
				very moist, slight organic odor.
240	245	5	2.16-4.06/	0-5.0' Silt and Sand: Interbeds, silt reddish brown (5 YR 4/3), grainy to smooth
			3.38-4.81	somewhat cohesive/plastic, sand brown (7.5 YR 4/3), very fine to fine, well sorted,
				sand interbeds up to 6" thick, silt interbeds up to 2' thick, somewhat loose, wet,
				no odor.
245	250	5	2.88-3.25/	0-5.0' Silt and Sand: Interbeds as above, but silt includes trace clay nodules
			3.10-3.88	reddish brown (5 YR 4/4) crumbly and fissile, very slight cohesive when worked,
				sand beds progressively becoming finer grained down section to very fine to fine to
				very fine with grainy silt.
250	255	5	2.90-4.15/	0-5.0' Silt and Sand: Interbeds, as above (245-250/0-5), layer of clay interbed
			1.5-9.01	between 3.5-4.0', as above.
255	260	5	-0.08- -0.20/	0-5.0' Silt and Sand: Interbeds as above, but primarily silt, interbeds of very fine
			0.64-2.3	sand up to 1" thick, also some interbeds of clay as above up to 1/4-1/2" thick.
260	265	5	-0.05-0/	0-5.0' Silt and Sand: Interbeds as above, some fine sand interbeds up to
			.61-1.3	4" thick from 2.5-2.9'.
265	270	5	0.5-0.73/	0-2.0' As above.
			77-132	2.0-3.0' Sand: Brown (7.5 YR 4/3), some medium, fine, well sorted, loose, wet,
				no odor.
				3.0-4.0' Silt and Sand and Clay: Interbeds as above, only trace sand.
				4.0-5.0' Sand: Brown (7.5 YR 4/3), trace to some silt, very fine to fine, well sorted,

			453-7384	medium to coarse, trace gravel subround to 0.5", silt is grainy, slightly cohesive,
				moist, mostly loose, no odor.
				0.5-1.5' Silt and Sand: Light brownish gray (10 YR 6/2), sand very fine, trace fine
				to coarse, trace gravel subangular to subround to 1", powdery mixture, loose,
				damp, no odor.
				1.5-2.0' Sand: Brown (7.5 YR 5/3), very fine to very coarse, some silt, poorly sorted
				mixture, though predominately fine grained, loose, damp, no odor.
				2.0-5.0' Sand: Pink (7.5 YR 7/2), very fine to fine, very well sorted, homogenous
				down to approximately 4.5, then slightly silty, trace gravel subangular to subround
				up to approximately 1", trace silty clay nodules, dark reddish brown (5 YR 3/4),
				somewhat cohesive at first, then crumbly, damp, no odor.
40	45	5	0-10.25/	0-2.0' Silt: Dark brown (7.5 YR 3/4), trace clay, silt is smooth to grainy, crumbly to
			18.08-3205	somewhat cohesive, somewhat firm, moist to wet, no odor, HP - 1.5, some clay
				lenses reddish brown (5 YR 4/4), lenses appear fissile, but plastic, and cohesive
				when worked.
				2.0-5.0' Silt/Sand: Pink (7.5 YR 7/4), sand very fine, siltier in places, especially 2.5-2.8
				and 4.0-4.3 where there is trace to some clay and silt is somewhat cohesive,
				otherwise powdery, loose, borderline silt/very fine sand, damp to moist, no odor.
45	50	5	0.64-2.25/	0-5.0' Silt/Sand: As above, silter places are 2.4 to 2.8' and 3.7 to 4.1' trace to
			1.71-2005	some grayish to black staining in places.
50	55	0	NR	No recovery, partial sample probably included in next section.
55	60	5	-1.27-	0-5.0' Silt: Brown (7.5 YR 4/4), smooth to somewhat grainy, somewhat crumbly
			-1.26/-1.8-	with clay nodules, reddish brown (5 YR 4/4) fissile to platey in appearance to smooth
			3.4	cohesive/plastic when worked, wet, no odor, HP = 3.0.
60	65	6	-1.01- -1.09/	0-5.0' Silt: As above.
			-2.9--1.8

				base of sand, gravel is subangular to subround up to approximately 1.5", poorly
				sorted mixture of sand/gravel, loose, wet, odor.
				3.5-5.0' Silt: Reddish brown (5 YR 4/4), trace fine to medium sand, silt is grainy,
				loose, crumbly to slightly cohesive, wet, odor.
120	125	5	1.71-2.21/	0-1.5' Silt: As above, but with little gravel 0-0.5 subround to 0.5", wet, odor.
			19300-	1.5-2.5' Silt: As above, but grading into very fine sand down section.
			23450	2.5-5.0' Sand and Silt: Reddish brown (5 YR 5/4), sand is very fine, less silty in some
				places, trace gray/black staining throughout, loose, wet, odor.
125	130	5	1.50-1.89/	0-5.0' Sand: Brown (7.5 YR 5/3), very fine to fine, well sorted, trace to some gray
			5065-	to black staining throughout, homogeneous, wet, loose, odor.
			24300	
130	135	5.0	1.75-3.98/	0-4.0' Sand; As above, very fine to fine, odor.
			7749-	4.0-5.0' Silty Sand: Brown (7.5 YR 4/4), sand is very fine, silt is grainy, trace grayish
			28900	staining, loose to very slightly cohesive, wet, strong odor.
135	140	5	0.92-1.97/	0-3.0' Sand: Brown (7.5 YR 5/3), very fine, very well sorted, trace silt, loose, moist
			857-46900	to wet, odor, grades 3.0-3.5 into section below.
				3.0-5.0' Grading from above, silt: Dark brown (7.5 YR 3/4) grainy to very slightly
				smooth, some vesicles breaking on surfaces, loose, and crumbly, saturated, odor.
140	145	5	1.76-2.79/	0-2.5' Silt: As above with possible very slight coarsening, approaches very fine
			1043-4249	sand in some places.
				2.5-3.5' Silt: Brown (7.5 YR 4/3), some clay reddish brown (7.5 YR 4/3), also some
				clay nodules with fissile appearance, but somewhat plastic/cohesive when worked,
				silt is grainy to smooth, saturated, strong odor.
				3.5-5.0' Silt: As above in 0-2.5.
145	150	5	1.22-3.33/	0-5.0' Silt: As above, reddish brown (5 YR 4/4), grainy to smooth is some places, a
			2843-35300	few vesicles, loose to crumbly, wet to saturated, odor.
150	155	5	2.32-3.65/	0-1.0' Silt: As above, but grading into very fine sand at 1.0.
			5073-98900	1.0-5.0' Sand: Brown (7.5 YR 4/4), very very fine, almost silt-like, little-some silt
				in nodules, trace gray to black staining, sand is very well sorted, loose to crumbly,
				wet, odor.
155	160	5	1.72-3.31/	0-5.0' Sand: As above, very fine.
			1000-18600	
160	165	5	1.74-3.96/	0-2.0' Sand: As above, very fine grading into silt down section, strong odor.
			5400-	2.0-5.0' Silt: Brown (7.5 YR 4/4), silt is grainy, loose to crumbly, very slight
			190200	cohesive, wet to saturated, strong odor.

0	5	5	0.36-7.06/	0-0.5' Asphalt core with hematite/iron road base fill material.
			1.78-19.41	0.5-1.5' Silt: Dark brown (10 YR 3/3), trace medium to coarse sand, little very fine
				sand, some rootlets, organics, loose, silt smooth, damp, crumbly, no odor.
				1.5-2.5' Silt: Dark yellowish brown (10 YR 4/6), trace medium to coarse sand,
				some very fine to fine sand, trace organics, silt grainy to smooth, loose, damp,
				crumbly, no odor.
				2.5-5.0' Sandy Silt: Dark yellowish brown as above, sand very fine to very coarse,
				some gravel angular to subround up to 2", poorly sorted mixture, loose, damp,
				crumbly, no odor.
5	10	5	10.88-37.87/	0-1.0' Silt: Brown (10 YR 5/3), grainy to smooth, very powdery, loose, dry, dusty,
			2.24-7.25	no odor.
				1.0-5.0' Silt/Sand: Yellowish brown (10YR 5/6), very very fine sand/borderline grainy
				silt, very well sorted, uniform, loose, damp, no odor, one 2" thick layer of smooth
				silt with clay varves, yellowish red (5 YR 5/6) at 3.5', smooth silt is dark yellowish
				brown (10 YR 4/4), somewhat cohesive and clayey, no odor.
10	15	5	13.08-21.61/	0-3.0' Slough: From above.
			9.17-28.19	3.0-5.0' Silt/Sand: As above, possibly a few interbedded smooth silt layers as
				above, but destroyed from drilling/intermixed, moist, no odor.
15	20	5	2.11-3.41/	0-5.0' Silt: Brown (7.5 YR 5/4), grainy-smooth, predominately grainy, uniform, trace
			1.21-34.97	black staining and oily odor, but probably from asphalt above, somewhat
				cohesive somewhat loose, saturated (not drilling fluid), no odor.
20	25	5	0.21-3.92/	0-5.0-Silt: Brown, as above, but one clay layer at 3-5', 2" thick, yellowish red
			1.22-13.93	(5 YR 4/6), firm, HP = 2.5, platy appearance on broken surface, plastic, cohesive,
				possibly confining layer causing perched water above, silt somewhat cohesive, as
				above, saturated above clay, moist to wet below clay, no odor.
25	30	5	3.51-7.40/	0-5.0' Silt: As above, brown (7.5 YR 5/4), predominately some smooth grainy, trace
			12-34	sporadic clay varves/layers up to 0.2", clay description as above, silt somewhat

				cohesive and firm, somewhat loose and crumbly when worked, wet -
				saturated, no odor.
30	35	5	2.11-9.04/	0-5.0' Silt: As above, smooth to grainy, trace well sorted very fine sand in a few
			7.75-24.51	places, possibly layers, uniform, trace clay varving/layers as above, wet to saturated,
				no odor.
35	40	5	-0.23-2.60/	0-5.0' Silt: As above, slightly more clay content, saturated, no odor.
			5.36-15.7	
40	45	5	1.32-2.79/	0-5.0' Silt: As above, brown (7.5 YR 5/4), grainy to smooth but predominately
			1.82-9.34	smooth, trace clay varving/layers, clay description as above, somewhat cohesive and
				firm, somewhat loose and crumbly when worked, wet to saturated, no odor.
45	50	5	0.50-3.02/	0-5.0' Silt: As above, slightly moderate clay content, one 1.5" thick clay layer at
			2.02-7.53	2.5', also trace varving/layers as above, wet to saturated, no odor.
50	55	5	0.5-7.70/	0-5.0' Silt: As above, possible minor trace black staining, trace vesicles, very slight
			7.35-24	odor?
55	60	5	0.79-5.24/	0-0.7' Silt/Clay Interbeds: Silt grayish brown (10 YR 4/2) clay, dark brown (7.5 YR
			6.06-19.57	3/4) fine interbedding, vared to 0.2" thick, clay is hard, HP >4.0, plastic when
				worked, appears fissile on broken surface, moderately uniform interbeds, silt is
				smooth, overall cohesive, firm, moist, no odor.
				0.7-5.0' Clay: Dark brown (7.5 YR 3/4), some fine silt interbed, but 90 percent clay,
				silt description as above, clay description as above, uniform clay, plastic, hard, HP
				>4.0, moist, no odor.
60	65	5	2.83-5.82/	0-3.0' Silt/Clay: Interbeds silt and clay descriptions as above, predominately clay,
			5-18	clay beds vared to 4", silt layer 0.5" or less, very hard, stiff, cohesive, moist, no
				odor.
				3.0-4.5' Sand: Brown (7.5 YR 5/4), very fine to fine grain, predominately fine, trace
				medium to coarse moderately sorted, trace silt, but probably washed in from
				above, loose, saturated, no odor.
				4.5-5.0' Sand: Color, as above, very fine grain, approaching grainy silt size, trace
				fine to medium, well sorted, loose, saturated, no odor.
65	70	5	0.70-4.76/	0-5.0' Sand: Strong brown (7.5 YR 4/6), fine to coarse, predominately fine to
			11-34	medium, little coarse, trace fine gravel, moderately sorted, loose, saturated, no
				odor, a few 2-3" rocks at bottom of sample.
70	75	5	0.07-5.62/	0-1.0' Sand: As above.
			2-48	1.0-3.0' Sand: Brown (7.5 YR 4/4), fine to very coarse grain, predominately
				medium to coarse, little subangualr to subrounded grave lup to 1.5", poorly sorted,
				poorly sorted, loose, saturated, no odor.
				3.0-5.0' Sand: Brown (7.5 YR 4/4), fine to very coarse grain, predominately fine to
				medium, moderately sorted, trace subround gravel to 1", trace silt, but could be

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
125	130	5	-0.11-2.20/	0-5.0' Silt/Sand: Brown (7.5 YR 4/4), very grainy, approaches very fine sand in
			3-22	size, uniform, little black stains, crumbly and loose, moist, slight odor in places.
130	135	5	-0.19-0.67/	0-5.0' Silt/Sand: As above.
			9-20	
135	140	5	-2.84- -2.36/	0-5.0' Silt: Brown (7.5 YR 4/4), grainy to smooth, approaching very fine sand in
			2.42-2.92	places, somewhat cohesive to loose and crumbly when worked, trace black staining,
				wet to saturated, no odor.
140	145	5	-2.15-0.26/	0-5.0' Silt: As above, but grainy, approaching very fine sand, color as above, no
			4.1-11.15	odor.
145	150	5	-1.63-7.96/	0-3.5' Silt: As above.
			12-48	3.5-5.0' Silt: Color as above, smooth, firm, somewhat cohesive, trace clay varves/
				layers as above, clay yellowish red (5 YR 4/6), plastic, appears fissile/platy on broken
				surface coarse, also trace to little clay in silt matrix, (but could be from drilling),
				moist to wet, no odor.
150	155	5	0.72-5.11/	0-5.0' Silt: Brown (7.5 YR 4/4), grainy to smooth, predominately very grainy,
			17-41	approaching very fine sand in places, somewhat cohesive, but loose and crumbly
				when worked, little black staining, wet to saturated, no odor.
155	160	5	0.2-2.30/	0-5.0' Silt: Brown (7.5 YR 4/4), smooth, somewhat firm, loose to crumbly when
			4-28	worked, black staining, uniform, no odor, saturated, methane vesicles on outside
				core.
160	165	5	0-1.14/	0-5.0' Silt: Brown (7.5 YR 4/4), smooth, uniform, fissily, no odor, crumbly when
			3-15	worked, somewhat firm/cohesiveness, saturated.
165	170	5	0/3-10	0-5.0' Silt: Brown (7.5 YR 4/4), smooth to grainy, uniform, somewhat firm,
				crumbly when worked, no odor, saturated.
170	175	5	0-6.07/2-7	0-5.0' Silt: Brown (7.5 YR 4/4) smooth, trace clay varving in places, trace black
				staining, uniform, smooth silt, somewhat firm to cohesive, but somewhat loose
				and crumbly when worked, possible slight odor.
175	180	5	1.07-2.4/	0-5.0' Silt with Clay Particles: Silt, brown (7.5 YR 4/4), clay, silt is smooth
			4.37-7.78	throughout, uniform, regular clay interbeds with 0.5-1.0" thick layers every foot,
				clay is stiff, HP = 3.5, plastic, cohesive, platy/fissile appearance on broken surface,
				silt somewhat cohesive to cohesive and somewhat plastic, moist to wet, slight
				odor?
180	185	5	1.4-2.17/	0-5.0' Silt: With clay interbeds as above, but less clay content, clay beds destroyed
			2.24-5.38	from drilling, clay appears varved to approximately 0.5" thick, otherwise as above,
				moist to wet, slight odor?
185	190	5	1.56-4.12/	0-5.0' Silt: Brown (7.5 YR 4/4), as above, with very little clay content, no discernable
			5.02-15.34	layers, but traces of yellowish red clay coloring, probably clay varves destroyed

				fine to coarse gravel, loose to slight coherent, some rootlets and organic material,
				moist.
				1.5-2.0' Sand/Gravel: As above from 0-1, at 2.0' some black staining and flakey
				material.
				2.0-4.0' Sand: Light brown (7.5 YR 6/4) medium to coarse grain, trace fine to
				coarse gravel, moderately sorted, loose, moist.
				4.0-5.0' Sand: Brown (7.5 YR 5/4) medium to very coarse grain, poorly sorted,
				some fine to coarse gravel subangular to subround, loose, moist.

Sample/Core Log (continued)

Boring/Well GM-86 A/B

Prepared by Jill Flater/Bruce Evans

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
20	25	3	2.9-3.9/	0-3.0' Sand/Gravel: Brown (10 YR 4/3) medium to very coarse grain some fine grain,
			485-48.9	fine to very coarse gravel, subangular to subround, very poorly sorted, mostly
				loose, several bands with silt that are more cohesive, sticky, moist.
25	30	5	17-33/	0-2.0' Silt/Sand/Gravel: Dark grayish brown (10 YR 4/2), very fine to coarse sand,
			48-49	fine to coarse gravel, very silty, very poorly sorted, loose to sticky, moist.
				2.0-3.5' Sand: Grayish brown (10 YR 5/2) fine to medium grain, moderately
				sorted, some fine to coarse gravel, subangular to subround, loose, moist to
				very moist.
				3.5-4.0' Silt/Sand/Gravel: Strong brown (7.5 YR 4/6) very poorly sorted mixture,
				silt, fine to coarse sand, fine to coarse gravel, subangular to subround, loose but
				sticky and slight cohesive due to silt, very moist, much gravel at 4 feet.
				4.0-5.0' Silt: Reddish brown (5 YR 5/4), smooth, some variation to more clayey
				and sandy with very fine grain sand at 4.0-4.5', color variable with strong brown
				(7.5 YR 5/8) some black staining especially in clay rich layers, moist to very moist.
30	35	5	180-858/	0-0.3' Silt: As above.
			47-53	0.3-1.0' Silt: Strong brown (7.5 YR 5/6) very grainy and sandy with very fine grain
				sand, slight loose, soft, moist.
				1.0-3.5' Silt: Reddish brown (5 YR 4/4) smooth and clayey to grainy from 3-3.5,
				firm and blocky to loose and powdery, abundant black staining 2.0-2.5', moist.
				3.5-4.0' Silt: Strong brown (5 YR 5/6) predominately grainy but also clayey pieces,
				grainy loose, clayey firm, moist.
				4.0-4.5' Silt/Sand: Dark grayish brown (2.5 YR 4/2) very fine to medium sand
				mixed with silt matrix, poorly sorted, trace coarse sand and fine gravel,
				predominately loose to somewhat firm, moist.
				4.5-5.0' Silt: Reddish brown (7.5 YR 5/6) grainy, smooth to powdery, moist.
35	40	5	130-11500/	0-5.0' Silt: Reddish brown (5 YR 4/4), smooth with some clayey layers, abundant
			45.8-52.9	black staining in clayey layers, some interbedding with grainy, sandy layers 0.5-1.0
				feet thick, moist, odor.
40	45	3	4490-26500/	0-3' Silt: As above, predominately smooth, black staining predominate 1-2 feet,
			46.1-47	moist, odor.
45	50	5	11600-33600/	0-5.0' Silt: Reddish brown (5 YR 5/3) grainy, powdery, with some very fine grain
			42.1-43.8	sand, color change at 2.5 feet to dark reddish gray (5 YR 4/2) and black staining
				4-5 feet, moist to very moist.
50	55	3	9800-33200/	0-2.0' Silt: Dark reddish gray (5 YR 4/2) grainy, some to trace very fine grain
			43.5-45.5	sand, somewhat smooth to somewhat loose, very moist, odor.
				2.0-3.0' Silt: Reddish brown (5 YR 4/3), smooth, no sand and not grainy, black
				staining, very moist to wet at 2 feet (52 feet).

Sample/Core Log (continued)

Boring/Well GM-86 A/B

Prepared by Jill Flater/Bruce Evans

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
55	60	0	NR	No recovery.
60	65	0	NR	No recovery.
65	70	5	129-3200/	0-5.0' Sand: Red brown (5 YR 4/3) very fine grain, very silty, well sorted, loose,
			-0.45- -1.61	some areas of higher silt content more firm/blocky, (fines in places slightly more
				cohesion), odor, wet, trace back staining.
70	75	5	1250-4700/	0-4.0' Sand: As above (very fine grain, silty), wet.
			-1.2-0.9	4.0-5.0' Sand: As above, very dark gray (5 YR 3/1) saturated, slightly darker in
				color.
75	80	5	750-4400/	0-1.5' Sand: Dark red brown (5 YR 2.5/2) very fine grain, silty, well sorted (loose to
			9.04-9.22	somewhat cohesive), wet.
				1.5-2.5' Silt (color as above), grainy, somewhat loose, trace very fine grain
				sand, wet, odor.
				2.5-3.5' Silt: Dark red brown (5 YR 3/3) smooth, clayey, somewhat plastic,
				sticky, odor, wet.
				3.5-5.0' Silt: Color as above, grainy, somewhat smooth, no clay, wet, loose to
				somewhat cohesive, odor.
80	85	5	1800-4100/	0-2.0' Silt: Dark red gray (5 YR 4/2) smooth, clayey, somewhat plastic, sticky,
			9.21-11.11	wet, odor.
				2.0-5.0' Silt: Smooth, blocky in appearance, crumbly when worked (grainy in places),
				black staining, odor.
85	90	5	550-3700/	0-4.0' Sand/Silt: Red brown (5 YR 4/3) gradational (very fine grain) sandy silt and
			13.5-14.8	silty very fine grain sand, loose to somewhat cohesive in places, well sorted,
				wet, odor, homogeneous.
				4.0-5.0' Silt/Sand: Very dark gray (5 YR 3/1) interbedded units of silty very fine
				grain sand, smooth silt and grainy silt, silt somewhat blocky/firm, silty very fine
				sand well sorted, loose, layers range from 0.5-2 inches thick, odor, wet.
90	95	5	1010-6200/	0-2.0' Sand: Very dark gray (5 YR 3/1) silty very fine grain sand, crumbly, well
			14.6-17.0	sorted, loose, wet.
				2.0-3.5' Silt: Red brown (5 YR 5/4) smooth, blocky, somewhat firm, (crumbly when
				worked) trace black staining, wet, odor.
				3.5-4.0' Sand: Color as above, very fine grain, silty, loose, well sorted, wet,
				black staining.
				4.0-5.0' Silt/Sand: Dark red gray (5 YR 4/2), gradational silty very fine sand,
				grainy silt, and smooth silt, variable throughout length, smooth to grainy silt,
				somewhat blocky, crumbly when worked, silty very fine grain sand, somewhat
				crumbly/loose, wet, odor, trace black staining.

Sample/Core Log (continued)

Boring/Well GM-86 A/B

Prepared by Jill Flater/Bruce Evans

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
95	100	5	25-2610/	0-2.5' Silt: Dark red gray (5 YR 4/2) smooth to somewhat grainy, somewhat
			19.3-20.2	cohesive, slightly plastic/clayey, wet, odor, black staining.
				2.5-3.5' Silt/Clay: Silt red brown (5 YR 3/3), clay yellow red (5 YR 4/6), smooth
				silt with clay varved/interbedded silt, cohesive to somewhat crumbly, silt some-
				what grainy, clay plastic, soft, wet, odor, black staining, clay mainly top 4".
				3.5-4.5' Silt: Red brown (5 YR 4/3) smooth, very clayey, cohesive, slightly plastic,
				wet, odor.
				4.5-5.0' Clay: Yellow red (5 YR 4/6) plastic, medium stiff, but fissile/platey on
				broken surfaces, trace black staining, odor, wet.
100	105	5	380-1900/	0-5.0' Silt: Red brown (5 YR 4/4) smooth, clayey, crumbly to somewhat cohesive,
			19.4-20.4	trace clay layering, clay, as above, no staining, wet, odor.
105	110	5	25-1390/	0-5.0' Silt: As above, very clayey, plastic/cohesive trace clay varves.
			20.9-21.1	
110	115	5	450-4520/	0-5.0' Silt: Red brown (5 YR 4/4) smooth, crumbly, somewhat firm, trace to no
			21.5-22.0	clay, wet, odor, no staining.
115	120	5	109-350/	0-5.0' Silt: As above, slightly clayey in places.
			22.1-22.7	
120	125	5	3-206/	0-5.0' Silt: As above, slightly more clay, evidence of yellow red clay varves through
			22.8-23.4	out, slight odor, odor (100-105').
125	130	5	49-505/	0-2.0' Silt: Red brown (5 YR 4/4) smooth silt, very clayey, cohesive, possible
			25.6-27.3	interbedded varved clay soft to medium, slightly plastic, odor, wet, no staining.
				2.0-5.0' Clay: Yellow red (5 YR 4/6) clay with silt (smooth) interbedded (varved),
				plastic, medium firm to firm, wet, odor, trace black staining, increasing silt
				content with depth.
130	135	5	52-510/	0-5.0' Silt/Clay: As above, varved, wet, odor.
			27.4-29	
135	140	5	22000-79000/	0-5.0' Silt/Clay: As above, interbedded varves, abundance of vesicules, black
			48-49.2	staining.
140	145	5	5300-670000/	0-3.0' Silt/Clay: As above interbedded varues, sharp contact with below.
			49-51.3	3.0-5.0' Sand: Very dark gray (5 YR 3/1) to black (Gley 2.5) very fine grain sand,
				some fine grain with depth, loose, well sorted, odor, wet, intense black staining.
145	150	5	--	0-2.0' Sand: As above, intense black staining top foot, staining decease with
				depth, very strong odor.
				2.0-4.5' Silt: Red brown (5 YR 4/4) grainy, smooth in places, crumbly to some-
				what cohesive, soft, odor, wet.
				4.5-5.0' Silt: As above with varying degrees of very fine grain sand.

Sample/Core Log (continued)

Boring/Well GM-86 A/B

Prepared by Jill Flater/Bruce Evans

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
150	155	5	1500-8200/	0-1.0' Silt/Sand/Clay: Color as above, interbedded layers fo grainy silt, smooth silt,
			0.9-2.5	clay and very fine grain silty sand, layers 1/2-1" thick, also varved in sections, wet,
				odor, trace black staining.
				1.0-5.0' Silt: Red brown (5 YR 4/4) and (5 YR 4/3) coarsens slightly with depth,
				smooth to grainy, black staining 3-4' wet, odor, crumbly to somewhat loose.
155	160	5	470-1500/	0-5 Silt: Red brown (5 YR 4/4) smooth to somewhat grainy, crumbly, wet, trace
			0.6-1.1	black staining, strong odor, abundant vesicules.
160	165	5	1011-16200/	0-1.0' Silt: As above.
			0.4-4.0	1.0-2.0' Silt: Color as above, grainy silt with some very fine grain sand, black
				staining, loose, very strong odor, wet.
				2.0-5.0' Silt: Color as above, grainy silt, 4-5' smooth, somewhat loose to blocky,
				vesicles in bottom foot, wet, very strong odor.
165	170	5	2400-6800/	0-5' Silt: Grainy with some very fine grain sand to smooth and clayey, somewhat
			1.6-2.3	loose to somewhat plastic, blocky in places, abundant vesicles in clayey fragments,
				wet, strong odor.
170	175	5	4200-14200/	0-5.0' Silt: Red brown (5 YR 4/4), smooth, somewhat loose to crumbly at top
			4.4-5.0	0.5' to wet, very strong odor, trace black staining.
175	180	5	270-6045/	0-5.0' Silt: Red brown (5 YR 4/4), smooth to grainy silt, crumbly to somewhat
			1.1-2.5	cohesive clayey in 4-5' with black staining, wet, very strong odor.
180	185	5	2400-77000/	0-0.5' Silt: As above (4-5 of 175-180) with black staining.
			0.8-3.2	0.5-5.0' Silt: Red brown (5 YR 4/4) smooth to somewhat grainy, somewhat
				loose to crumbly, very strong odor, wet, no black staining.
185	190	5	170-4000/	0-5.0' Silt: As above, very homogenous, trace vesicles at top, no black staining.
			0.4-0.7	
190	195	5	620-8000/	0-5.0' Silt: As above, very homogenous, no vesicles at top, no staining.
			0.5-1.5	
195	200	5	0.06-4700/	0-5.0' Silt: As above.
			0.1-0.7	
200	205	5	700-2900/	0-5.0' Silt: As above, trace vesicles.
			0.3-0.7	
205	210	5	1800-17700/	0-5.0' Silt: As above, trace very fine sand, no vesicles
			0.3-1.2	
210	215	5	1800-24700/	0-5.0' Silt: Color as above, very sandy (very fine grain) silt, homogenous, well
			2.1-2.9	sorted very fine sand, loose, wet, strong odor, no staining.
215	220	5	45000-127000	0-5.0' Sand: Red brown (5 YR 5/3) very fine grain, very silty, loose to somewhat
			-1.55- -1.37	blocky, well sorted, very strong odor, abundant vesicles, no staining.

Sample/Core Log (continued)

Boring/Well GM-86 A/B

Prepared by Jill Flater/Bruce Evans

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
220	225	5	950-523000/	0-5.0' Sand: As above, very fine grain, silty.
			-1.4-0.4	
225	230	5	22000-88000/	0-5.0' Sand: As above, color change to red brown (5 YR 4/4) very fine grain, silty,
			1.3-4.7	still abundant vesicles, very strong odor.
230	235	5	760-69000/	0-5.0' Sand/Silt: Color as above, very fine grain sand and grainy silt, somewhat
			3.0-9.5	loose to blocky, well sorted very fine sand, very homogenous, wet, very strong odor.
235	240	5	48000-133000/	0-3.0' Sand: Red brown (5 YR 4/4) very fine grain, very silty, somewhat loose,
			7.3-10.6	well sorted, trace gravel (3-4 pieces ≤1/2") fine to coarse gravel predominately
				black slate, wet, very strong odor.
				3.0-5.0' Silt: Color as above, smooth, somewhat clayey, clay interbedded varves in
				3.0-3.5', crumbly, low cohesion, soft, wet, strong odor, no staining.
240	245	5	13000-89000/	0-5.0' Silt: Color as above, smooth silt, somewhat grainy and clayey in places,
			9.3-10.2	somewhat cohesive, very abundant vesicles, blocky in places, soft, wet, strong odor,
				no staining,
245	250	5	27500-160000/	0-5.0' Silt: As above, smooth, clayey/grainy in places, abundant vesicles.
			9.1-12.8	
250	255	5	63000-101000/	0-5.0' Silt: As above, smooth, neither clayey or grainy.
			7.5-10.4	
255	260	5	29000-139000/	0-5.0' Silt: Color as above, red brown (5 YR 4/4) smooth, grainy in places, abundant
			1.8-4.7	vesicles, somewhat loose to blocky, wet, very strong odor.
260	265	5	32000-169000/	0-2.5' Silt: As above with very fine grain silty sand, dark red gray (5 YR 4/2)
			5.0-7.4	layer, 2" thick at 1', well sorted, wet, strong odor, no staining.
				2.5-5.0' Sand: Very fine grain, silty, well sorted, loose, wet, very strong odor, no
				staining.
265	270	5	141000-	0-5.0' Sand: Color as above, very fine grain as above, slightly less silt.
			179000/	
			8.6-10.3	
270	275	5	132000-	0-2.5' Sand: Color as above, very fine grain, silty.
			980000/	2.5-3.0' Silt: Red brown (5 YR 4/4) and gray (5 YR 5/1) smooth, finely interbedded
			4.3-5.6	silts of different colors, soft, crumbly, wet, very strong odor, no staining.
				3.0-5.0' Silt: Red brown (5 YR 4/3) smooth, crumbly when worked, blocky, wet,
				very strong odor, no staining.
275	280	5	462-12700/	0-5.0' Silt: Red brown (5 YR 4/4) smooth, grainy in places, blocky to crumbly
			1.7-2.8	when worked, abundant vesicles, wet, very strong odor, trace black staining.
280	285	5	570-78000/	0-5.0' Silt: As above, slightly more grainy.
			1.7-4.1	

ARCADIS

Sample/Core Log (continued)

Boring/Well GM-86 A/B

Prepared by Jill Flater/Bruce Evans

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
285	290	5	570-60800/	0-0.5' Silt: As above, smooth.
			7.8-9.3	0.5-5.0' Silt: Color as above, grainy, clayey from 1-1.5', varved interbeds with
				black staining, somewhat plastic, somewhat loose, wet, very strong odor, trace
				black staining.
290	295	5	5200-710000/	0-1.0' Silt: As above, grainy, driller had a hard time getting sample out of core
			7.6-10.1	barrel, very jumbled hard to differentiate layers.
				1.0-2.5' Sand: Red brown (5 YR 4/3) fine grain, some very fine grain sand, silty
				(probably mostly from above to jumbled), poorly sorted, wet, very strong odor,
				loose to somewhat blocky, no staining.
				2.5-4.0' Sand: Brown (7.5 YR 4/3) fine grain sand, trace medium grain, trace to
				little silt (again maybe from above), moderately well sorted, wet, loose, strong
				odor, no staining, 2 pieces coarse gravel at 2.5' subangular both 2"x1".
				4.0-5.0' Sand: Very fine grain sand, grading to grainy silt, silty clayey in places,
				loose to somewhat loose, slightly plastic in bottom 2", wet, very strong odor.
295	300	5	2110-17800/	0-3.5' Sand: As above, very fine grain, lacks clayey portions, silt increases with
			0.9-4.9	depth, abundant vesicles, sharp contact with below.
				3.5-5.0' Silt: Red brown (5 YR 4/3) grainy silt, smooth in places becoming finer
				with depth, blocky, somewhat loose, wet, very strong odor,
				abundant vesicles, no staining.
300	305	5	2305-28700/	0-2.0' Silt: As above, grainy, trace black staining.
			3.35-8.5	2.0-3.0' Sand: Brown (7.5 YR 5/3) fine to medium grain, trace coarse, trace very
				fine, moderately sorted (predominately fine), wet, strong odor, no staining.
				3.0-5.0' Sand/Silt: Colors as above, intermixed sand fine to medium grain (above)
				and grainy silt (above), sand layers are very silty, characteristics as above, sample is
				jumbled. approximate layering 1-5" thick, wet.
305	310	5	7310-15800	0-1.0' Sand/Silt: As above.
			3.7-7.3	1.0-4.0' Sand: Red brown (5 YR 4/4) very fine grain sand, silty, loose, well sorted,
				homogenous, strong odor, wet, fines with depth.
				4.0-5.0' Silt: Color as above, red brown (5 YR 4/4) grainy, trace very fine sand at
				top, somewhat loose, wet, very strong odor, trace black staining.
310	315	5	2660-61500/	0-2.5' Silt: As above, grainy, no very fine grain sand.
			3.1-7.3	2.5-3.0' Sand: Light brown (7.5 YR 6/3) fine grain, trace very fine, well sorted,
				loose, wet, strong odor.
				3.0-4.0' Silt: As above, grainy.
				4.0-5.0' Sand: Very fine grain, brown (7.5 YR 4/4) interbedded very fine grain,
				silty, and fine grain sand (color as above), well sorted, jumbled intermixed of
				different solid color, very fine grain, loose, wet, strong odor, no staining.

Sample/Core Log (continued)

Boring/Well GM-86 A/B

Prepared by Jill Flater/Bruce Evans

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
315	320	5	8000-41000/	0-5.0' Sand: Brown (7.5 YR 4/3) very fine grain, silty, loose, wet, well sorted,
			4.2-7.0	homogenous trace black staining, strong odor.
320	325	5	1130-12400/	0-4.0' Sand: As above, very fine grain, silty.
			1.5-5.0	4.0-5.0' Silt: Color as above, grainy silt, trace very fine grain sand, somewhat
				loose to wet, very strong odor, trace black staining.
325	330	5	4200-70400/	0-0.5' Silt: Red brown (5 YR 4/4).
			4.4-4.7	0.5-3.5' Sand/Silt: Very fine grain silty sand and grainy silt, somewhat loose, wet,
				very strong odor, no staining.
				3.5-5.0' Silt: Red brown (5 YR 4/4) slightly grainy silt, smooth and clayey in places,
				mostly somewhat loose, some places slightly plastic, wet, very strong odor, no
				staining.
330	335	5	4600-74800/	0-2.5' Silt: As above, no clayey parts, trace very fine grain sand at bottom.
			2.3-10.4	2.5-3.5' Sand: Color as above, very fine grain sand, silty, little to trace fine to
				coarse grain sand, poorly sorted, loose, wet, strong odor.
				3.5-4.0' Silt/Gravel: Dark red gray (5 YR 4/2) smooth to grainy silt, fine to coarse
				gravel up to 2" diameter most <1/2"angular to subangular, silt slightly clayey,
				somewhat plastic to somewhat loose, wet, strong odor.
				4.0-5.0' Silt: Color as above, grainy, trace fine to coarse gravel up to 1" diameter
				angular to subangular, clayey, somewhat plastic, wet, very strong odor.
335	340	5	9100-17200/	0-5.0' Sand: Dark brown (7.5 YR 3/2) fine grain sand, trace very fine, and medium
			2.8-3.1	grain, well sorted, loose, trace silt 0-0.5', wet, very strong odor, no staining.
340	345	5	32600-58500/	0-1.0' Sand: As above, fine grain, fines with depth.
			2.5-6.6	1.0-2.0' Sand: As above, some very fine grain sand, some silt.
				2.0-3.0' Silt: Red brown (5 YR 4/3) smooth, clayey, somewhat plastic to plastic,
				soft, wet, very strong odor, vesicles.
				3.0-4.0' Sand: Dark red gray (5 YR 4/2) very fine grain, very silty, loose to somewhat
				loose, wet, well sorted, very strong odor.
				4.0-5.0' Sand/Silt: Color as above, interbedded very fine grain silty sand and smooth
				silt, both above characteristics and colors, intermixed irregularly, abundant
				vesicles in smooth clayey silt, very strong odor, wet, varved 4" layering.
345	350	5	5000-160000/	0-2.5' Sand/Silt: As above, very fine grain silty sand, smooth clayey silt.
			1.2-3.5	2.5-5.0' Clay/Gravel: Very dark gray (Gley 1 3/N) (till), clay, fine to coarse gravel
				angular to subangular up to 4" diameter, same fine to very coarse sand, some
				smooth silt, clay is plastic, vesicles, soft, till as whole very dense, compacted mass,
				gravel and sand in matrix of silt/clay, crumbly when worked, wet, strong odor.
350	355	1.5	5100/0.6	0-0.5' Silt/Clay/Gravel: As above, till, more silt.
				0.5-1.5' Weathered/pulverized bedrock, rocks are green/black slate Gley 1 (2.5/56Y),
				weathered, pulverized to silt/sand/gravel pieces fine to coarse up to 3" diameter,

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/ OVM (ppm)	Sample/Core Description
0	5	5	3.58-48.60/	0-1.5' Silt/Gravel/Sand: Dark brown (7.5 YR 3/4) topsoil, somewhat clayey, grainy
			9.23-9.51	silt, fine to coarse sand, gravel up to 1" diameter, fine to coarse, moist, somewhat
				loose, organic odor, trace roots, twigs.
				1.5-2.5' Silt: Strong brown (7.5 YR 5/8) grainy silt, very dense/firm, very hard to
				break, trace organics, moist.
				2.5-4.0' Sand: Color as above, very fine grain, silty, trace fine sand, loose, moist,
				no odor, moderate sorted.
				4.0-5.0' Sand: Strong brown (7.5 YR 4/6) very fine to very coarse grain, very silty,
				some gravel up to 2" diameter subangular to subround, loose, moist, poorly
				sorted.
5	10	3	2.81-7.38/	0-0.5' Sand: As above.
			9.5-10.1	0.5-3.0' Sand: Brown (7.5 YR 5/4) fine grain, trace medium to coarse, well
				sorted to poorly sorted along length, 4" layers of well sorted with layers of fine
				to very coarse grain sand with some gravel up to 1" subangular to subround,
				loose, moist, poorly sorted, no odor.
10	15			No recovery.
15	20	5	0.31-1.45/	0-1.0' Sand: Dark brown (7.5 YR 3/4) fine to very coarse grain, very silty/clayey,
			9.8-10.8	gravel some fine to coarse gravel up to 1" diameter subangular to subround,
				very poorly sorted, moist to wet, somewhat loose, no odor.
				1.0-5.0' Silt: Silt clay brown (7.5 YR 5/4) smooth, clayey, somewhat plastic to
				plastic, varied 1/2" clay interbedding soft, clay is platey on broken surface, soft
				plastic, moist, no odor.
20	25	5	0.64-2.09/	0-1.0' Silt: As above interbeds of grainy silt.
			10.9-11.5	1.0-5.0' Silt/Clay: Clay red brown (5 YR 4/4) smooth silt, clayey, interbedded with
				soft clay, silt is very clayey, somewhat plastic to plastic, soft, clay is soft to firm in
				places, plastic, platey on broken surface layers, silt range from 0-3", silt 1-3" moist,
				no odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
25	30	5	1.21-28.6/	0-1.0' Silt/Clay: As above, trace black staining neighboring the clay layers, layers of
			12.4-13.3	clay 1/4-1/2" thick, silt 1-1.5" thick.
				1.0-2.0' Silt/Clay: As above (20-25'; 1-5') clay color is red brown (5 YR 4/3),
				clay firm.
				2.0-3.5' Silt: Brown (7.5 YR 4/2) interbedded varved clay, silt is smooth to grainy ,
				silt grading to very fine sand (silty) in places, layering undistinguishable, smooth
				silt is clayey, plastic, grainy silt is somewhat loose, wet, no odor.
				3.5-5.0' Sand/Silt: Brown (7.5 YR 5/3) very fine grain, silty sand and sandy silt, sand
				moderately well sorted, somewhat loose, wet, slight odor, somewhat clayey/
				plastic at bottom.
30	35	3.5	6.02-82.4/	0-2.0' Sand/Silt/Clay: Interbedded, very fine grain silty sand, smooth clayey silt,
			12.3-13.1	clay red brown (2.5 YR 5/4) soft clay; sand less silty in 1.5-2.0', somewhat loose;
				wet, slight odor, moderately sorted, silt brown (7.5 YR 5/3) smooth, slight to
				somewhat plastic, (clay soft, plastic), less clayey portions somewhat loose.
				2.0-3.0' Sand: Fine grain sand, some medium, moderate well sorted, little silt,
				loose, wet, no odor.
				3.0-3.5' Sand: Brown (7.5 YR 4/3) very fine grain, silty, some gravel fine to coarse
				up to 3" diameter, angular to subround, well sorted, wet, no odor,
35	40	5	90-12700/	0-1.5' Sand: Brown (7.5 YR 4/4) fine grain, trace medium to very coarse, silty,
			12.7-13.3	some gravel up to 2" diameter, angular to subround, very poorly sorted, very wet,
				no odor.
				1.5-2.5' Sand/Gravel: Brown (7.5 YR 4/2) fine to very coarse grain sand, fine to
				coarse gravel, trace silt probably from above, very poorly sorted, wet, no odor,
				fine to coarse gravel up to 2" angular to subround, mostly <1/4", loose.
				2.5-5.0' Sand: Brown (7.5 YR 5/4) fine to medium grain, little coarse to very
				coarse sand, trace to little gravel in places fine to coarse, trace to no silt, poorly
				sorted, loose, wet.
40	45	5	80.10-11400/	0-2.0' Sand: Color as above, fine to medium sand, no silt, trace coarse, sand
			12.9-14.4	moderate well to well sorted in places, wet, loose, slight odor.
				2.0-2.5' Silt/Clay: Overall color brown (7.5 YR 4/3) smooth silt and clay, interbedded
				(varved 1/8"), soft, clay isplastic, wet, odor.
				2.5-5.0' Silt: Red brown (5 YR 5/4) grainy silt grading to very fine sand, silty in places,
				somewhat loose, wet, odor, trace black staining.
45	50	5	94.6-1640/	0-5.0' Silt: Red brown (2.5 YR 4/4) grainy silt, slightly plastic/clayey in places,
			13.1-13.3	grades to silty/very fine grain sand in others, wet, somewhat loose to somewhat
				plastic, odor, trace black staining.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Blows per 6 inches	Sample/Core Description
0	2	--	--	Blind drill. Auger cuttings. Silt/gravel: Brown (10 YR 4/3), fill, compacted silt with fine to coarse gravel, mostly angular to subangular, trace cobbles to 2 inch diameter, well graded gravel, frozen to dry.
2	4	1.0	15-13-17-19	Silt/Gravel/Sand: Strong brown (7.5 YR 5/6), mostly silt matrix, with silty very fine grain sand with some fine to coarse grain, fine to coarse gravel, angular to subrounded, well graded, frozen to 0.5 then loose, dry to moist, HP = 1.0.
4	6	0.8	9-16-15-17	Sand/Gravel: Brown (7.5 YR 5/4), sand very fine to fine grain, trace medium to coarse, fine to coarse gravel, angular to subround, moderately graded, loose, HP = 0.5, moist.
6	8	0.6	17-21-37-16	Sand/Gravel: Light brown (7.5 YR 6/3), fine to coarse sand, some very fine and silt, well graded, fine to coarse gravel, angular to subround, loose, HP = 0.5, moist to very moist, angular broken 1" diameter cobble in spoon tip.
8	10	0.5	10-14-10-12	Sand/Gravel: As above, slightly less gravel, more fine grain sand, loose, moist, HP = 0.5.
10	12	--	10-13-8-7	No recovery.
12	14	0.1	7-13-40-25	Sand: Brown (7.5 YR 4/4), poor recovery, mostly fine to very fine grain with trace medium to coarse gravel, silty, sticky, wet.
14	16	1.0	23-17-15-14	Silt: Brown (7.5 YR 4/4), soft, somewhat plastic, HP = 0.75, with traces clay, yellowish red (5 YR 4/6), plastic but fissle looking on broken surfaces, interbedded/varved with silt in very thin layers (<1.0 mm), wet.
16	18	--	--	Push Shelby tube.
18	20	1.0	10-16-17-14	Silt/Clay: As above, interbedded layers, clay more prevalent, clay layers thicker 0.25-0.5 inch, clay plastic, silt somewhat plastic to somewhat firm, HP = 2.5-4.0, very moist to wet.
20	22	--	19-25-31-25	No recovery.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Blows per 6 inches	Sample/Core Description
				0.3-0.5' Sand: As above, but with much more gravel, fine to coarse gravel.
16	18	1.2	16-17-17-16	0-1.2' Silt: Reddish gray (5 YR 5/2) with traces of interbedded clay layers, yellowish red
				(5 YR 4/6), silt grainy, sticky, soft, HP = 0.7, silt somewhat plastic, wet, clay layers very thin
				(mm thickness), clay is plastic.
18	20	0.5	18-20-15-17	0-0.5' Silt: As above, with very minor clay layers.
20	22	--	--	Pushed Shelby tube.
22	24	1.2	16-15-15-19	0-1.2' Silt/Clay: Silt reddish brown (5 YR 5/3), clay yellowish red (5 YR 4/6), interbedded silt
				and clay, very uniformly interbedded layers, clay 0.2-1.0" thick, silt 0.5 to 1.0 inch thick, silt
				somewhat grainy, clayey, moderately plastic, clay plastic yet fissile-looking on broken
				surfaces, wet, clay HP = 2.0, silt HP = 1.5.
24	26	0.2	15-16-17-15	Silt/Clay, as above.
26	28	1.4	14-13-12-11	0-0.2' Silt/Clay, as above.
				0.2-0.7' Sand: Reddish brown (5 YR 5/3), very fine grained, silty, sticky, loose, HP = 0.1,
				wet, poorly graded.
				0.7-1.1' Sand: Brown (7.5 YR 4/4), mostly fine to medium grained, poorly graded, loose,
				wet, traces of 0.2-0.5 inch silt seams.
				1.1-1.4' Sand: Dark brown (7.5 YR 3/3), very fine grain, very silty, somewhat sticky,
				poorly graded, loose, wet.
28	30	0.4	5-7-8-5	0-0.4' Sand: Brown (7.5 YR 4/3), fine grained, some very fine, trace silt, wet, green to
				black staining 0.1-0.4', very poorly graded, loose, no odor.
30	32	0.8	7-6-7-7	0-0.2' Sand: Brown (7.5 YR 4/3), very fine grained, very silty, HP = 0.5, loose, wet, very
				poorly graded. Possible slough from above.
				0.2-0.8' Sand: Reddish brown (5 YR 5/3), fine grained, very poorly graded, trace very fine
				sand, wet, loose,
32	34	0.9	10-13-12-15	0-0.9' Sand: Reddish brown, as above.
34	36	0.8	18-17-16-19	0-0.8' Sand: Reddish brown (5 YR 5/3), fine grained, some very fine, some silt, trace silt
				banding in places, loose, wet, poorly graded.
36	38	2.0	17-16-17-17	0-2.0' Sand: As above, but finer, primarily very fine to fine grain, poorly graded, loose,
				wet, more silty from 1.0-2.0.
38	40	0.4	15-14-14-15	0-0.4' Sand: Reddish brown (5 YR 4/3), very fine grain, very silty, sticky but loose, wet,
				poorly graded.

				19.0-20.0": Sand. Fine to very fine, as 8-14".
16	18	12"	4,6,8,12	0-12.0": Sand. Fine to very fine, as above, dry, some silt lenses, loose, no HCl reaction.
		15		
18	20	21"	4,6,10,15	0-21.0": Sand. Fine, as above, but mainly fine sand, trace silt lenses. Dry.
		≤12		
20	22	16"	3,5,10,18	0-16.0": Sand. Fine, as above. Dry.
		≤20		
22	24	19"	6,5,7,12	0-6.0": Sand. Fine, as above, dry.
		4		6.0-19.0": Sand. Very pale brown (10 YR 7/4) coarse, dry, loose, some pebble gravel
				(subangular to subrounded, variable composition) much very coarse sand. No HCl
				reaction.
24	26	19"	4,6,12,15	0-19.0": Sand. Coarse as above, dry.
		10		
26	28	16"	4,5,10,10	0-3.0": Sand. Coarse as above, dry.
		17		3.0-16.0": Sand. Very pale brown (10 YR 8/4) medium, dry, loose, much coarse sand,
				trace very coarse sand. No HCl reaction.
28	30	16"	5,7,10,15	0-16.0": Sand. Medium, as above, dry.
		18		
30	32	17"	5,7,10,14	0-17.0": Sand. Medium, as above, dry.
		10		
32	34	16"	6,10,17,20	0-16.0": Sand. Medium, as above, but no coarse sand, very well sorted.
		22.5		
34	36	20"	6,7,15,22	0-14.0": Sand. Medium as above.
		7		14.0-20.0": Sand. Light gray (10 YR 7/2) coarse to very coarse, dry, loose, trace gravel,
				no HCl reaction.
36	38	12"	5,8,11,13	0-12.0": Sand with Gravel. Light grey (10 YR 7/2) coarse to very coarse, loose, slightly
		2.5		moist. Gravel: subangular to subrounded, variable composition.
38	40	15"	6,8,10,20	0-15.0": Sand. Very pale brown (10 YR 8/3) coarse, trace to some very coarse sand,
		12		slightly moist, loose. No HCl reaction.
40	42	16"	6,10,15,20	0-4.0": Sand. Very pale brown (10 YR 7/4) coarse to medium, slightly moist, loose. No
		≤5.5		HCl reaction.

Prepared by Ray Flynn

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
				4.0-8.0": Sand. Very pale brown (10 YR 7/4) coarse to very coarse, slightly moist, loose,
				no HCl reaction. Trace to some pebble gravel, subangular to well rounded, variable
				composition.
				8.0-16.0": Sand. Coarse to medium, as 0-4.0" with trace very coarse sand.
42	44	15"	7,9, 13,12	0-15.0": Sand. Very pale brown (10 YR 8/3) medium, slightly moist to dry, loose, well
		6		sorted, trace gravel, no HCl reaction.
44	46	17"	7,10,13,19	0-17.0": Sand. Medium, as above, grading down into coarse to medium sand, dry,
		22		trace well rounded pebbles. No HCl reaction.
46	48	17"	4,7,8,10	0-17.0": Sand. Very pale brown (10 YR 8/3) coarse to medium, as above, grading down
		5.5		into coarse sand, very dry, loose, trace well rounded gravel.
48	50	13"	8,8,10,15	0-4.5": Sand. Coarse as above, with some very coarse sand.
		15		4.5-13.0": Sand. Yellowish red (5 YR 5/6) fine to very fine, very well sorted, firm, very
				moist to saturated, no HCl reaction.
50	52	17"	6,8,6,9	0-17.0": Sand. Fine to very fine, as above, saturated, no HCl reaction, finer with depth.
		10		
52	54	18"	5,7,7,10	0-18.0": Sand. Reddish brown (5 YR 5/4) very fine, saturated, HP = 1.0. No HCl
		2.5		reaction.
54	56	20"	5,5,8,9	0-20.0": Sand. Very fine, as above, saturated.
		4.5		
56	58	22"	5,7,7,10	0-14.0": Sand. Very fine, as above, saturated.
		15		14.0-19.0": Silt. Brown (7.5 YR 5/4), very sandy, very slight HCl reaction. HP = 1.5,
				saturated trace clay lenses.
				19.0-22.0": Sand. Very fine as 0-14.0 inch.
58	60	33"	5,7,10,8	0-6.0": Sand. Very fine, as above, saturated.
		10		6.0-23.0": Silt. As above, saturated.
60	62	23"	5,8,9,9	0-23.0": Silt. As above, saturated, HP = 0.8. Trace clay lenses.
		6.5		
62	64	18.5"	4,5,5,7	0-18.5": Silt. Sandy, as above, very moist to saturated, trace clay lenses, trace HCl
		4.5		reaction. Silt very finely laminated. Slight HCl reaction.

Sample/Core Log (continued)

Boring/Well GMSB-135

Prepared by Andy Mumpy/Toni Schoen

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				2.3-3.1' Sand: As above.
				3.1-5.0' Silty Sandy and Gravel: As above, redescribed here, brown (10 YR 4/3),
				sand very fine to very coarse, predominately very fine to fine, gravel angular to
				subround to 1.5", silt nodules multi-colored as above, very silty, loose, moist,
				no odor.
25	30	5	19.1-65/	0-1.0' Silt and Sand: Dark yellowish brown (10 YR 3/6), trace clay, trace subround
			25-55	gravel to 0.5", silt in matrix, grainy to smooth, some silty nodules as above, sand
				predominately very fine to fine, some coarse, moderately sorted, loose, damp,
				no odor.
				1.0-2.5' Silt and Sand: As above, but color is brown (10 YR 4/3), and dry.
				2.5-3.5' Silt and Sand: As above in 25-26, brown (10 YR 4/3).
				3.5-5.0' Silt/Sand/Gravel: Trace clay in matrix, also a few multicolored plastic
				clay nodules, may have been layered, silt grainy to smooth, also some silt nodules
				as above, sand very fine to very coarse, predominately fine, gravel angular to
				subround to 2", very poorly sorted, loose, damp, no odor.
30	35	5	22.37-64.08/	0-0.5' Silt/Sand/Gravel: As above.
			17-71	0.5-5.0' Sand/Silt: Strong brown (7.5 YR 5/6), much clay 2.5-3.0, probably as
				clay layer, clay is strong brown (7.5 YR 4/6), very soft, plastic, otherwise uniform,
				very grainy silt/borderline very very fine sand, very well sorted, loose, damp,
				no odor.
35	40	5	-3.27-0.62/	0-5.0' Sand/Silt: As above, but saturated, liquefied from drilling.
			3-40	
40	45	0	--	No recovery.
45	50	5	-4.31- -1.32/	0-3.0' Silt with Clay Interbeds: Silt is brown (7.5 YR 5/4), clay is yellowish red
			3.17-15.42	(5 YR 4/6), predominately smooth silt, with clay layers varved to approximately 1",
				clay is plastic when worked and has fissile platy appearance on broken surface,
				soft, HP = 0.5, overall cohesive, firm, wet (from drilling), no odor.
				3.0-5.0' Silt: Brown (7.5 YR 4/4), trace clay varves as above, smooth to grainy,
				cohesive wet, uniform, no odor.
50	55	5	-.59- -4.1	0-5.0' Silt: As above, brown (7.5 YR 4/4), with trace clay varving as above, smooth
			5.02-19.73	to somewhat grainy, uniform, moist to wet (from drilling?), slight odor?
55	60	5	1.97-8.36/	0-2.0' Silt: As above.
			756-10000	2.0-5.0' Silt/Clay: Interbeds: Silt, brown (7.5 YR 5/4), clay yellowish red (5 YR 4/6),
				clay layers varved to 2" thick, abundant clay, but still predominately silt, smooth
				to somewhat grainy, clay appears fissile on broken surface as above, but is hard,
				HP = 4.0, plastic, overall firm, cohesive, damp to moist, no odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5	4.24-5.0/	0-0.5' Silt: Black, little very fine to fine sand, topsoil, many organics, rootlets,
			2.07-3.39	grass, little fine gravel, moist, loose, organic odor.
				0.5-1.0' Silty Sand: Very fine to fine grain, trace to little subround gravel to 1.5",
				well sorted sand, loose, damp, organic odor.
				1.0-1.4' Silt: Dark yellowish brown (10 YR 4/4), very grainy, some very fine to fine
				sand, silt is somewhat cohesive, contains gravel subround up to 2.5" in matrix,
				crumbly when broken, damp, no odor.
				1.4-5.0' Sand: Strong brown (7.5 YR 5/6), fine grain, trace medium to very coarse,
				moderately well sorted, trace fine subangular to subround gravel, loose, damp,
				no odor.
5	10	5	0.12-6.26/	0-3.5' Sand: As above, but with more medium to very coarse grains, predominately
			1.17-7.62	fine, some medium to very coarse, poorly sorted, color as above, also more gravel
				content, little to some subangular to subround gravel to 3", loose, dry to moist,
				no odor.
				3.5-5.0' Silt/Sand/Gravel: Brown (7.5 YR 4/4), sand very fine to very coarse,
				predominately sand matrix, very poorly sorted, silty, much fine gravel angular to
				subround, some up to 1", loose, damp, no odor.
10	15	5	6.22-6.80/	0-0.5' Sand: Fine to very coarse gravel, predominately medium, poorly sorted,
			0.75-2.78	trace fine subround gravel, loose, moist, no odor.
				0.5-5.0' Sand: Brown (7.5 YR 5/4), fine to medium grain, trace coarse, trace
				angular to subround gravel up to 1", well sorted, loose, clean sand, moist,
				no odor.
15	20	5	5.04-9.95/	0-5.0' Sand: Brown (7.5 YR 4/4), very fine to very coarse grain, predominately
			91.8-21.3	fine, trace gravel angular to subround to 1.5", little gravel 1.0-3.0, little silt in
				places, poorly sorted, loose, damp, no odor.
20	25	5	8.11-11.79/	0-1.0' Sand: Brown (7.5 YR 5/4), as above, but somewhat firmer, predominately
			8.75-22.97	very fine grain, moderately to well sorted, less gravel, loose, damp, no odor.

Sample/Core Log (continued)

Boring/Well GMSG-138

Prepared by Andy Mumpy/Toni Schoen

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				1.0-5.0' Silt: Brown (7.5 YR 5/3), smooth, uniform, crumbly, some very very fine
				sand 3.0-3.2, very well sorted, soft, loose, damp, no odor.
25	30	5	7.35-11.44/	0-5.0' Silt: As above, smooth, uniform, brown (7.5 YR 5/3), soft, crumbly,
			5.07-16.39	somewhat cohesive to somewhat loose, damp to moist, no odor.
30	35	5	8.11-10.99/	0-5.0' Silt: As above, trace clay varves at 32', clay is yellowish red (5 YR 5/6), plastic,
			3.45-17.91	has fissle appearance, otherwise uniform silt as above, moist to wet, somewhat
				cohesive to somewhat loose, soft, somewhat crumbly, some vesicles, no odor.
35	40	5	4.64-7.44/	0-5.0' Silt: As above, brown (7.5 YR 5/4), slightly more clay, a few sporadic clay
			2.09-9.12	layers as above, varved to approximately 0.5" thick, predominately silt matrix as
				above, uniform, smooth, wet to saturated, somewhat cohesive (due to moisture
				content), vesicles, soft, no odor.
40	45	5	6.98-12.26/	0-5.0' Silt: As above with a few clay layers, as above.
			9.74-26.59	
45	50	5	4.47-10.75/	0-5.0' Silt: As above, brown (7.5 YR 5/4), trace clay varying as above, but color
			6.28-128.91	grades into brown (10 YR 5/3), below 3.0, otherwise same as above, uniform,
				smooth, soft to somewhat firm, somewhat cohesive, wet, trace vesicles, no odor.
50	55	5	4.51-8.77/	0-2.0' Silt: As above.
			3.01-11.97	2.0-3.0' Silt: Brown (10 YR 4/3), darker color then above, smooth to grainy, some
				clay layers, varved to 1" thick, clay is plastic, yellowish red (5 YR 4/6), with fissile
				appearance on broken surface, medium dense, HP = 3.0, silt is somewhat
				cohesive to somewhat loose and crumbly, soft to somewhat firm, moist to wet,
				no odor.
55	60	6	4.86-9.53/	0-2.0' Silt/Clay Interbeds: Silt is brown (7.5 YR 4/4), clay is yellowish red (5 YR 4/6),
			19000-150000	silt matrix is smooth to very grainy in places, approaches very very fine sand below
				1.0', clay is plastic, dense, HP = 4.0, clay layers varved to approximately 1.5" thick,
				fissile/platy appearance on broken surface, silt matrix is somewhat cohesive and
				contains trace clay, overall damp to moist, no odor, possible confining unit holding
				perched water above, sharp contact with dry sandy unit below.
				2.0-2.5' Sand: Brown (7.5 YR 5/4), predominately fine grain, trace medium to
				coarse, trace fine subangular to subround gravel up to 1", moderately well
				sorted, loose, dry to damp, no odor.
				2.5-5.0' Sand: Light brown (7.5 YR 6/3), sand predominately fine, little medium
				to very coarse, some very fine, some silt, little gravel angular to subround up to
				1.5", powdery, poorly sorted, loose, dry, no odor.
60	65	5	8.63-11.21/	0-5.0' Sand: As above, powdery, dry, some silt, no odor, 1.5-2.5' interval contains
			301-2450	some sand, strong brown (7.5 YR 4/6), fine grain, but probably drilling
				phenomena, very silty 4.5-5.0', predominately very fine sand and silt 4.0-5.0', dry,

Boring/Well GMSG-138

Prepared by Andy Mumpy/Toni Schoen

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				loose, no odor.
65	70	5	5.34-21.80/	0-5.0' Silty Sand: Light brown (7.5 YR 6/3), predominately very fine to fine grain,
			7600-12000	trace medium to coarse, 65-66' contains some medium to coarse, little gravel
				subangular to subround up to 2", 65-66', trace fine subangular to subround gravel
				below 66', very silty in places, less silt 3.0-4.0', sand is moderately to well sorted,
				loose, powdery, dry, no odor.
70	75	5	6.37-11.03/	0-0.5' Sandy Silt: Pinkish gray (7.5 YR 6/2), powdery silt with sand very fine grain,
			5000-27000	trace medium to coarse, trace fine gravel subangular to subround, loose, dry,
				dusty, no odor.
				0.5-1.0' Sand: Pinkish gray (7.5 YR 7/2), very fine to fine grain, well sorted, loose,
				dry, no odor.
				1.0-1.5' Sandy Silt: As above in 70-70.5', interbedded sandy silt vs very fine sand
				in 0-5.0'.
				1.5-2.0' Sand: As above, pinkish gray, very fine to fine grain, well sorted, dry.
				2.0-2.5' Sandy Silt: As above.
				2.5-4.0' Sand: As above, but slightly coarser, predominate fine grain, very well
				sorted, dry, trace silt, but silt could be from bounding layers of sandy silt.
				4.0-5.0' Sandy Silt: As above, dry, powdery, no odor.
75	80		3.74-10.65/	0-2.0' Sandy Silt: As above, dry, powdery, no odor.
			7.16-15000	2.0-5.0' Sand: Brown (7.5 YR 5/4), fine grain, trace medium to coarse, well sorted,
				loose, saturated, no odor.
80	85	5	4.5-7.66/	0-1.5' Sand: Brown (7.5 YR 4/4), predominately very fine to fine grain, trace
			911-1650	medium to coarse, moderately to well sorted, loose, saturated, no odor.
				1.5-5.0' Sand: Dark brown (7.5 YR 3/3), medium grain, trace coarse, well sorted,
				loose, no odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
16	18	12"/5.0	5,6,6,6	0-12": Silt. As above, very moist, but slight HCl reaction. Clay at 0 inch (1/8
				inch) and 9½ inch (¼ inch). Clay moderate HCl reaction, more sandy
				toward base, becoming silty very fine sand.
18	20	16"/5.0	3,3,6,8	Silt. Clay and silty sand as above, interbedded. Moderate laminations up
				to ½ inch thick 1/8 inch clay at 4, 6½, 8½, 11½ and 14½ inches. HCl
				reaction (ranging from) strong in clay to weak in silty sand. Saturated.
20	22	14.5"/3.5	4,6,5,8	Interbedded moderately laminated silt and silty sand, as above with clay
				lenses (1/16 inch) at ½, 4½, 7½, 9½, 11½ inches, saturated to moist at base.
22	24	16"/4.5	6,8,8,10	Interbedded silt, silty sand and clay as above, saturated. Clay 0, 4, 8¼ inch
				thick clay lenses at 12 and 15 inches. Well sorted, fine sand lenses at 7 inches
				(1/8 inches) and 16.5 inches (¼ inches) saturated.
24	26	17"/3.5	3,4,5,8	Interbedded silt, silty sand and clay as above, very moist to saturated ½ thick.
				Clay at lenses 4, 5, 8¼ inch clay lenses at, 11, 13½, 16½ inches. HP (silt) 2.5 to
				>4.0. HP (clay) = 2.0 to 2.5, HP (silty sand) = 1.0 to 1.5. Crumbly.
26	28	20"/3.5	6,5,4,8	0-7.0": Interbedded silts, clays and silty sands, saturated.
				7.0-20": Interbedded silty sands, silts and clay as above, but mainly silty
				sand and clay. Moist. Clay main lithology, up to 3 inches thick, moist to dry,
				HP = 3.5 to 4.0, strong HCl reaction.
28	30	20"/15	3,4,6,8	0-20": Interbedded silty sand, silt and clay as above, but mainly silt and clay,
				moist to dry, HP (silty) 3 to 4. HP (clay) 3.5 to 4.0.
30	32	17"/150	3,5,6,8	0-7.0": Interbedded silt, silty sand and clay as above, dry to slightly moist.
				7.0-10": Clay. Reddish brown (5 YR 5/4) dry, HP = 2.5. Strong HCl reaction.
				10-17": Interbedded very fine sand, silty sand and silt. Moderately
				laminationed (units up to ¼ inch thick) dry to slightly moist, fine sand lense
				15 to 15.5 inch, dry (HP silt = 3.0). Sand more abundant toward base.
32	34	9"/600	11,12,12,13	0-9.0": Sand. Fine to very fine, pink (7.5 YR 7/4), dry, loose, slight HCl
				reaction, finely laminated
34	36	5"/5	6,7,11,10	0-4.0": Sand. Fine to very fine, as above, dry and loose.
				4.0-5.0": Sand. Coarse, brownish yellow (10 YR 6/6), dry, loose, some to much
				granular gravel, much sample lost. No retainer.
36	38	12"/50	11,10,13,12	Sand. Fine to medium, pinkish white (7.5 YR 8/2), dry, loose, very well sorted,
				no HCl reaction.

16	18	16"	2,4,7,8	0-3.0": Silt. As above, moist, slight HCl reaction.
		3.5		3.0-16.0": Silt/Sand. Moderately laminated. Silts as above. Sand: very fine to
				slightly silty, (7.5 YR 6/4) moist, well sorted, slightly cohesive, slight HCl
				reaction.
18	20	12"	5,6,7,7	0-12.0": Silt/Sand. As above, moderately laminated ¼ inch clay horizon at 3.5
		2.25		inch, 1/18 inch horizon at 9½ inch. Moist, HP (silt) = 3.0, silt contains trace to some
				very fine sand, moderate HCl reaction, very finely
				laminated in lowest 2 inches.
20	22	19"	4,5,5,6	0-16.0": Sand/Silt. Moderately laminated, very fine sand and sandy silt. Color, sand
		2		and silt, brown (7.5 YR 6/4) HP (silt) = 2.5, slight HCl reaction, contains variable
				amounts of very fine sand. 1/16 inch clay lenses at 4, 13, 16 inches. Cycles from very
				fine sand into silt into clay. Saturated.
				16.0-19.0": Silt. As above, clay lens at 17½ inch. Very moist to saturated.
22	24	14"	5,5,5,9	0-14.0": Silt. As above, with variable very fine sand composition, trace to sandy
		2.5		silt, ¼ inch clay lenses at 4 and 10 inches and ¼ inch fine silty sand lens above
				10 inch clay lens, moist.
24	26	18.5"	6,7,9,8	0-18.5": Silt and Clay. Finely bedded. Silt brown (7.5 YR 5/4) variable sand
		2.75		composition (trace to sandy silt) faintly and thinly laminated, HP = 2.0 to 2.5.
				Slight HCl reaction, slightly moist to dry. Clay, red (2.5 YR 5/6),
				strong HCl reaction, HP = 2.0, slightly plastic, foliated, lenses 1/8 to 1 inch thick.
				Approximately 20 percent of sample.
26	28	17"	3,5,4,6	0-17.0": Silt and Clay. As above, finely bedded. Silts contain trace fine sand lenses,
		2.5		(clay approximately 40 percent of sample), slightly moist to dry, silt more
				sandy toward base of sample.
28	30	12"	2,4,4,7	Silt and Clay. Finely bedded, as above, slightly moist to dry, clay forms 30 to 40
		500		percent of sample, lenses up to 1½ inch thick. Silt very finely laminated with some
				very fine sand seams.
30	32	16"	6,8,8,13	0-5.0": Silt and Clay. Finely bedded, as above. Silt contains much very fine sand,
		750		dry to slightly moist.

Site Location: Kingsford, Michigan (Noel's Storage #3, 1491 Pyle Dr.)

Drilling Started: 7/18/05 Drilling Completed: 7/18/05

Total Depth Drilled: 5 Feet Hole Diameter: 2.5 inches Type of Sample/ Coring Device: Auger (Hand)

Length and Diameter of Coring Device: Auger Bucket Sampling Interval: continuous feet

Land-Surface Elev.: 1131.44 feet [X] Surveyed [ ] Estimated Datum: Mean Sea Level

Drilling Fluid Used: None Drilling Method: Hand Auger

Drilling Contractor: ARCADIS Driller: RTG Helper: NA

Prepared By: RTG/GJM Hammer Weight: NA Hammer Drop: NA ins.

Sample/Core Depth (feet below land surface)

From	To			Sample/Core Description
0	1			Sand: Brown, fine grain, with fine to medium gravel, dry.
1	5.0			Sand: Brown, fine grain subangular, medium and coarse grain sand mixed in, moist.

0	2	-2.7/	0.9	6 5 9 14	0-0.9' Silt: Dark brown (7.5 YR 3/3) smooth, trace fine to medium grain
		-5.3			sand, trace organics (roots/grass), 0-0.5' frozen, otherwise somewhat loose,
					no odor, moist, soft (topsoil).
2	4	-2.7/	1.7	6 10 11 11	0-0.2' Silt: As above.
		-5.8			0.2-0.5' Sand: Strong brown (7.5 YR 4/6) fine to coarse grain, trace very fine,
					trace fine gravel angular to subround up to 1/2" diameter, poorly sorted,
					loose, moist to dry, no odor, sharp contact with below.
					0.5-1.1' Silt: Very dark brown (7.5 YR 2.5/2) smooth, sandy, fine grain sand,
					trace medium grain sand, somewhat firm, crumbly to somewhat loose
					when worked, moist, no odor sharp contact with above and below.
					1.1-1.5' Silt: Strong brown (7.5 YR 4/6) smooth, little fine sand, medium
					firm, crumbly when worked, moist, no odor.
					1.5-1.7' Sand: Strong brown (7.5 YR 5/6) very fine to fine grain sand,
					some silt, slight trace medium grain sand, well sorted, loose, moist.
4	6	-2.8/	1.0	6 7 9 16	0-0.6' Sand: As above, very fine to fine grain, trace silt.
		-6.2			0.6-1.0' Sand: As above, Strong brown (7.5 YR 4/6), color change, some
					silt, little very coarse grain sand from 0.6-0.7, sharp color contact with
					above, moist, loose, no odor.
6	8	-4.3/	1.2	11 15 18 14	0-0.2' Sand: Strong brown (7.5 YR 5/6) very fine to fine grain sand, trace
		-8.5			silt, well sorted, loose, moist, no odor.
					0.2-1.2' Sand/Gravel: Strong brown (7.5 YR 4/6) fine to very coarse grain
					sand and fine to coarse angular to subround gravel, trace very fine grain
					sand, gravel up to 2" diameter, very poorly sorted, loose, moist, no odor.
					1.1-1.2' Sand: Brown (7.5 YR 5/4) fine grain, some medium grain sand,
					trace fine gravel <1/4" diameter sub angular to subround, moderately to
					poorly sorted, loose, moist, no odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/ OVM (ppm)	Sample/Core Description
0	0.4	--	--	Grass and topsoil. Topsoil was silty, dark brown, trace amounts of clay, slight plasticity, slight cohesiveness, poorly sorted, slight moisture, miscellaneous human debris.
0.4	3.2	--	--	Clay: Light brown, with reddish sand mixed in, some cohesiveness, poorly sorted, slight moisture, as decrease in depth clay becomes more compact in chunks in the sand.
3.2	5.2	--	--	Sand: Reddish light brown, medium, some sorting, non-cohesive, slight moisture (damp). Sorting became more apparent as depth increased.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
0	~3.5	---	---	Dark brown, organic-rich top soil. Sand medium to fine, silty, trace clay, some gravel-
				size. Apparent paleo-soil, horizon at approximately 1.5 feet (possible mold
				filliments).
3.5	5			Fill and charred wood, brick, clay-tiles broken glass, rubber, metal fragments, foundry
				sand mixed in with dark brown soils (sand/silt).
5	7			Layer of beige to tan brick (fine brick) (large wood fragments above brick layer)
				Note: Approximately percentages soils 80-85 percent, brick 5-7 percent, wood
				fragments 3 percent, metal fragments (thin 1-1/8" to 1/4" diameter
				cable-like),1 percent, cloth 1 percent, glass 1 percent (light bulbs, soda bottles) part
				of a 55 gallon drum; oil soaked wood fragments (trace), (20 to 30 ppm with OVA),
				rubber sheeting or belt.
7	13'10"			Mix of soils and above listed items.
				TD 13'10" (filled in test pit).
				Brick fragment markings LFB WKS and ArtnA Louisville.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
				TP-25 orientated NW-SE across supposed channel between NE and SW Pits.
				Started at SE end of pit.
0	1.5			Sand/Gravel: Light brown, fine to medium sand with variable fine to coarse gravel,
				moderate to poor sorting. At 1.5' paleo soil horizon. Black organics, root/rootlets
				mixed with sand.
1.5	5			Sand. Reddish brown, fine to medium grained, moderate to well sorted, trace fine
				gravel.
5	10			Sand: Light reddish brown, coarse to very coarse, some medium with, varying
				amounts fine to coarse gravel.
				From SE end of pit to approximately 27' NW sequence same 1' fill - black horizon-
				native soil. At 27' along trench from SE channel beginning to form. Fill to 5 feet
				at 27'. Fill to 7 feet at 45'.
0	5/7			Fill predominately sand, light brown to reddish brown, mixed with organic
				material-burnt/charred soil and wood, also pieces wood/limbs/trunks roots, trace
				wire, metal.
				At 50' along trench from SE, fill increases to 10-12'. 1-10 predominately sand.
				10' wood organic material. Tar/carbonized wood mixed with wood.
				From 50 to 65 feet along trench, bottom old channel at 9 feet.
				Tar mixed with carbonized wood and trace limbs present in this zone primarily 6-9'
				in a thick mass.
				Typical section.
0	2			Sand/Gravel: Light brown, fine to coarse mostly sand.
2	6			Sand. Light brown to reddish brown, fine to coarse mixed with minor wood.
				Several dense black beds 1-4" thick, not continuous.
6	9			Sand/Wood/Tar/Carbonized wood: Tightly matted, broken and splintered wood, tree
				limbs, trunks, stumps, roots.
9	12			Sand/Gravel: Light reddish brown, medium to very coarse grained, poorly sorted with
				fine to coarse gravel and pebbles, odor.
				Tar ends at approximately 65'.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
				Beginning at SE end of Pit.
0	1			Silt: Light brown, rootlets.
1	3			Sand: Reddish brown, fine to medium grained, some coarse to very
				coarse, with gravel.
3	5			Fill: Organics, roots, charred and burnt wood fragments, sawdust, clay,
				ash?, white sugary material (mortar?).
5	8			Sand: Light reddish brown, fine to medium, rootlets.
8	11			Sand: Reddish brown to yellowish brown, fine to medium, very silty and
				clayey with gravel and coarse sand.
				From 15 ft to 25 ft: black horizon thins and dips downward.
0	7			Sand/Gravel: Fill.
7	7.5			Black horizon
7.5	11			Sand: Reddish brown, also stained black.
				At 25 feet: Fill zone thickens.
0	7			Sand/Gravel.
7	10			Black fill. Woody mass.
10	12			Sand: Base sometimes stained.
				From 25 to 40 feet: fill thickens again downward.
0	7			Sand.
7	11			Fill. Carbonized tary mix.
11	12			Sand.
				Fill is a black mass of wood fibers, branches and limbs shattered, carbonized
				wood and tar, wood bark chips also mixed in.
				At 50 feet from SE end, large influx of water from woody fill.
				Base fill still approximately 11 feet.

ARCADIS GERAGHTY & MILLER

Sample/Core Log (Cont.d)

Boring/Well TP-29

Prepared by Bruce Evans

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
				Less tar 40 to 50 feet intermixed with woody fill. Fill still approximately
				7 to 11' but sand units starting to develop 7 to 9 feet. (9-11' still
				solid organics/wood).
				From 50-60 feet east wall has little woody fill, west wall displays thick
				section still.
				60 feet channel ends; fill goes from 6-10 feet to 5-6 feet over 3 feet
				(60 to 63). From 63-73, base channel approximately 5 feet at NW end
				of pit.
0	4			Fill sand/gravel.
4	5			Fill sand/organics, black, woody, clayey, dense, charred wood.
5	11			Sand. Light reddish brown, mostly fine to medium with coarse sand and
				gravel beddings 6" to 1' thick.
				Note several 1-2" black horizons, discontinuous, in top 1 foot fill.
				Minor tar present 25 to 50' within fill at 7-11'.
				Test pit dimensions: 12' wide, 73' long, 11-13' deep
				TP-29 is a test trench oriented NW-SE.

Sample/Core Depth (feet below land surface)

From	To	Length (feet)		Sample/Core Description
0	2.5	0	9	Brown silt underlain by silt/sand with rock and gravel, some red clay.
2.5	3.5			Sand, brown, mostly medium-coarse grain.
	3.5			Paleo soil horizon: Roots/rootlets black, in coarse sand.
3.5	7			Sand: Dark brown, coarse with gravel, moist.
	7			Second Paleo surface: Black organic material, roots, rootlets, peat, reeds, trace charred
				wood and burnt wood fragments, moist, strong odor.
7	9			Sand: Dark brown to light reddish brown, medium -coarse grain with gravel and pebbles,
				very poorly sorted, loose, some dark staining, some odor. No evidence of any waste
				material.
		9	11	No waste material.
				Fill soil to approximately 7 feet, some black staining in sand fill from 3.5 to 7 feet and
				black staining and some odor below 7 feet. No staining or odor in upper 3.5 feet of
				sand/gravel, fill.
0	12	11	14	Material same as before.
		14	18	No observed waste with exception of bricks and brick fragments and a 2 foot piece of
				processed wood at the 7 foot paleo horizon.
		18	20	Sequence similar to start of test pit (west end).
0	3.5			Rock/gravel/sand fill.
3	3.5			Coarse sand/gravel fill with rootlets and some black staining.
6	7			Paleo horizion.
7	12			Sand: Fine to medium grain with gravel, native material.
		20	25	Lower paleo horizon rising to 6 feet several wood pieces - limb fragments and metal band
				present Paleo horizon.

ARCADIS

Sample/Core Log

Boring/Well TP-31

Prepared By Bruce Evans

Sample/Core Depth (feet below land surface) From	To	Length (feet)		Sample/Core Description
		25	30	Lower Paleo horizon at approximately 6 feet some wood pieces, processed 2 x 4s
				and tree limbs present primarily at Paleo Horizon at 6 feet, minor black staining in
				upper fill some black stainig and odor in Paleo Horizon and underlying native sand.
				No waste material or tar or demolition debris noted with exception of the wood pieces and
				several brick fragments at approximately 10 feet along length of test pit from west,
				test pit 5-6 feet wide 30 feet long by 9-12 feet deep.

Sample/Core Depth (feet below land surface)

From	To	Length (feet)		Sample/Core Description
0	3	0	14	Sand: Light reddish brown, medium-coarse with gravel and rock, frost line at
				approximately 2 feet.
	3			Soil Horizon, black, 1 foot thick, thinning westward, charred sand/gravel/organic material,
				bits of charred wood.
4	7			Sand: Light brown, fine-coarse grain with some gravel and rock, trace metal wire at 5 feet
				along length.
	7			Paleo surface second horizon approximately 3-4" thick, black horizon with organic
				material and peat.
7	11			Sand: Light brown, coarse grain with some medium grain, gravel and pebbles, loose,
				moist, no staining.
		14	20	
3	7			Demolition Debris: Concrete with rebar reinforced concrete 2" thick, often with a coating
				of tar, concrete black staining on one or both sides, pieces wood - processed and charred,
				some tar thin layers black flexible material, similar to roofing tar, some sheet metal,
				demolition debris is in the fill unit from 3 to 7 feet. Appears to be native sand at
				approximately 7 feet.
		20	25	Same as above fill/demolition derris to 7 feet.
		25	27	Demolition debris ends, black horizon from 3 feet to approximately 6 to 7 feet visible on
				south wall, north wall 3 to 5 feet or approximately 2 feet both underlain by sand fill.
				Native sand still at approximately 7 feet.
3	6			Black material observed above dense unit of organic material, mostly ash and charred
				wood, mixed with burnt sand, some sawdust, trace bark and unburnt wood chips. No+E76
				tar to sludge visible in the black material between 3 and 7 feet.

ARCADIS

Sample/Core Log

Boring/Well TP-32

Prepared By Bruce Evans

Sample/Core Depth (feet below land surface) From	To	Length (feet)		Sample/Core Description
		27	31	Top of black material dips to 4 feet then 5 feet and thins to approximately 2 feet thick
				(5 to 7 feet) visible in south and north walls. Black material, organic rich, primarily woody
				material, sawdust, bark shreds, rootlets, peat. Majority of demolition debris in north wall
				is from 15 to 22 feet along pit from east and in interval 3 to 7 feet.
				2-3' black material in north wall at 30 feet.
		31	32	At north wall at east end test pit approximately 1 foot black material in 3 to 4 feet.
				Test Pit TP-32 5 to 6 feet wide by 32 feet long x 10 to 11 feet deep only visible tar
				associated with demo debris.

Randy Radke	Boart Longyear	Hollow Stem Auger	8/18/05

VERTICAL SCALE ~1"= 15'

14APR06\FORD\WI0637\CJ2005\GRAPHICS\STRAT LOGS\DRAWING: GMSG_499 AC.AI

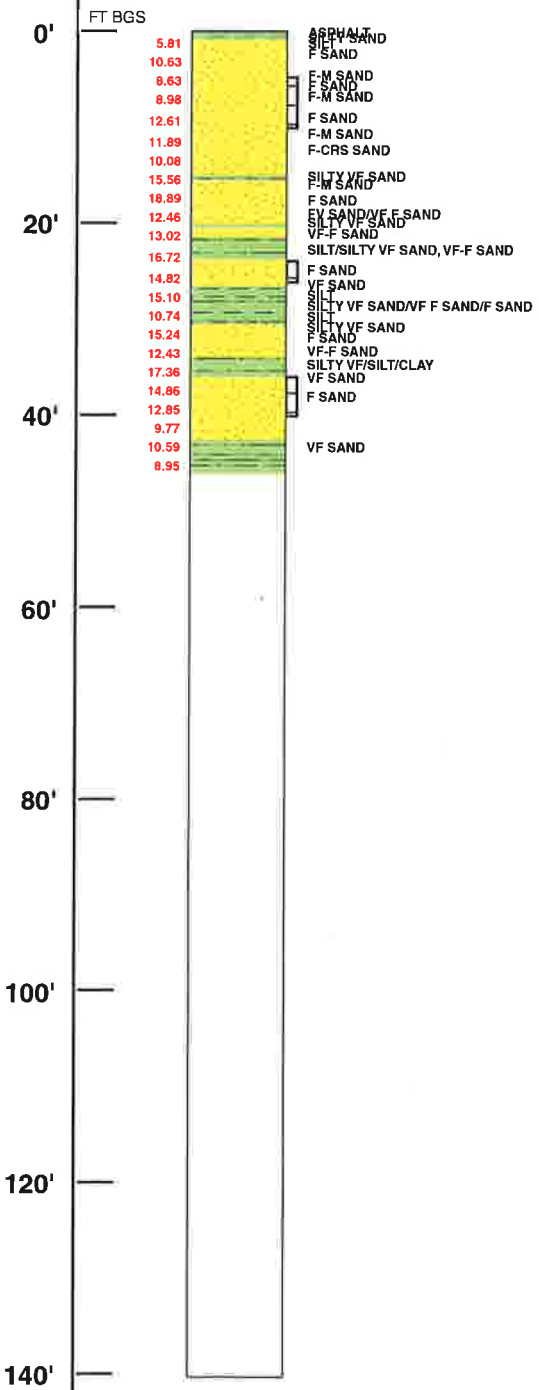
ARCADIS

BOREHOLE STRATIGRAPHIC LOG

OBSERVATION WELL NO. GMSG-500 A/C

PROJECT FORD/KINGSFORD WI001095.0015

LOCATION			LAND SURFACE ELEVATION
Kingsford, Michigan			1120.87 Feet MSL
GEOLOGIST	**SAMPLE INTERVAL**	**SAMPLING DEVICE**	**TOTAL DEPTH DRILLED**
J. Flater	Continuous	Splitspoon	43 Feet BLS
DRILLER	**DRILLING CONTRACTOR**	**DRILLING METHOD**	**DATE BORING COMPLETED**
Randy Radke	Boart Longyear	Hollow Stem Auger	8/19/05



VERTICAL SCALE ~1"= 20'
