Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5	2.12-28.52/	0-1.0' Sandy Silt: Dark yellowish brown (10 YR 3/4), little gravel subangular to
			7430-428000	subround up to 3", trace rootlets/organics, trace clay, silt is smooth, some sand
				very fine, well sorted, loose, damp, odor.
				1.01.3' Silt: Dark brown (10 YR 3/3), trace gravel fine up to 5" subangular to
				subround, abundant roots/organics, loose, damp, odor.
				1.3-1.9' Silt: Dark yellowish brown (10 YR 4/4), trace rootlets/organics, trace very
				fine sand, smooth to grainy, damp, odor.
				1.9-2.5' Silt: As above in 1.0-1.3'.
				2.5-4.0' Silty Sand: Dark yellowish brown (10 YR 3/6), little gravel subangular to
				subround up to 3", sand predominately very fine, little fine to coarse, poorly sorted,
				very silty, loose, damp, odor.
5	10	1.0	1.51-2.58/	0-1.0' Clayey Silt: Reddish brown (5 YR 4/3), could be slough, or squeezed past
			7074-42300	rock into core barrel, sticky, distorted, saturated, odor.
10	15	0		No recovery. Pushing rock.
15	20	3	1.14-2.05/	0-3.0' Silt/Clay Interbeds: Silt is brown (7.5 YR 4/4), clay is reddish brown (5 YR 4/3),
			1290-2240	predominately silt (smooth), many clay layers, predominately varves and very fine
				laminations/interbeds, a few thicker clay beds up to 1.5", trace very fine sand
				interbedding, well sorted very fine sand interbeds <1 mm thick, sandier 2.8-3.0',
				trace gravel throughout, saturated, trace black staining, vesicles, odor.
20	25	0		No recovery.
25	30	5	1.55-1.92/	0-2.0' Sand: Dark brown (7.5 YR 3/3), little gravel subangular to subround up to 4",
			8280-25300	coarse, some fine to medium, poorly sorted, clean, saturated, odor.
				2.0-5.0' Sand: Brown (7.5 YR 5/3), fine grain, trace medium to coarse, well sorted,
				clean, saturated, odor.
30	35	5	1.94-3.34/	0-2.3' Sand: As above, with black staining.
			3560-20100	2.3-2.8' Sand: Color as above, fine to medium grain, trace coarse, trace fine gravel,
				well sorted, loose, saturated, odor.

Boring/Well GMPZA-1

Prepared by Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				2.8-3.3' Sand: As above in 0-2.3'.
				3.3-5.0' Silt: Brown (7.5 YR 4/4), few clay interbeds approximately 1/2" thick,
				clay yellowish red (5 YR 4/6), plastic, appears platy when broken, medium stiff to
				soft, trace clay in matrix, saturated, odor.
				EOB @ 35'.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	4	12.64-48.10/	0-0.8' Fill: Slate pieces.
			291-3570	0.8-2.0' Silt: Dark yellowish brown (10 YR 3/4), topsoil, sticks, roots, organics, trace
				very fine sand, organic odor, damp.
				2.0-4.0' Silt: As above, but without all the organic material.
5	10	5	1.51-2.72/	0-3.0' Sand and Gravel: Brown (7.5 YR 4/4), little silt, sand very fine to coarse,
			125-12300	predominately fine, very poorly sorted, gravel predominately fine, up to 2",
				subangular to subround, loose, damp to 1.5 then saturated, no odor.
				3.0-5.0' Silt: Dark yellowish brown (10 YR 4/4), little clay in matrix, smooth, trace
				very fine to medium sand at 5.0, cohesive, saturated, no odor.
10	15	5	1.21-2.80/	0-5.0' Silt/Clay Interbeds: Silt is brown (7.5 YR 4/4), clay is yellowish red (5 YR 4/4),
			780-1870	predominately silt, clay content increases downward, clay layers range from 0.5-
				2" thick, more clay below 3.0', clay is somewhat stiff, plastic, appears platy on
				broken surfaces, cohesive, saturated, no odor.
15	20	5	1.02-1.46/	0-3.0' Silt/Clay Interbeds: As above, somewhat less clay, layers are approximately
			1440-2930	1" thick or less.
				3.0-5.0' Silt: Brown (7.5 YR 4/3), trace clay, trace very fine to fine sand seam <1/2"
				thick at 2.4', silt varies in grain size and is laminated due to minor grain size
				variations, saturated, somewhat cohesive, no odor.
20	25	5	1.25-2.97/	0-1.0' Silt: As above.
			3340-31900	1.0-2.0' Sand: Reddish brown (5 YR 4/4), little gravel up to 1.5" subangular to
				subround, predominately medium to coarse, some fine, poorly sorted, loose,
				saturated, slight odor.
				2.0-5.0' Sand: Reddish brown (5 YR 5/4), trace fine gravel, fine grain, trace very fine,
				little medium to coarse, moderately sorted, loose, saturated, odor.
25	30	5	1.73-3.04/	0-5.0' Sand: Brown (7.5 YR 4/3), some gravel subangular to subround up to 3",
			4340-11700	predominately coarse, some fine to medium, poorly sorted, loose, saturated, odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	3	1.78-5.70/	0-0.5' Fill: Slate.
			16-72	0.5-1.5' Silt: Dark brown (7.5 YR 3/3), abundant organics, rootlets, topsoil, damp,
				organic odor.
				1.5-3.0' Silt: As above, with color change to dark yellowish brown (10 YR 3/4),
				damp, no odor.
5	10	5	1.93-2.18/	0-2.0' Sandy Silt: Strong brown (7.5 YR 5/6), trace fine gravel, sand with very fine
			1250-8210	to fine sand, loose, damp, no odor, grades over approximately 1' into unit
				below.
				2.0-5.0' Silty Sand and Gravel: Dark brown (7.5 YR 3/2), gravel fine up to 2"
				subangular to subround, sand all sizes, predominately fine to medium, very
				poorly sorted, loose, saturated, no odor.
10	15	0.0		No recovery.
15	20	5	1.62-2.22/	0-4.5' Silt with some Clay Interbedding: Silt is brown (7.5 YR 4/4), clay is yellowish
			155-8730	red (5 YR 4/6), trace fine gravel, extremely distorted sample, clay layering barely
				discernable, appears to be fine interbedding, possibly up to 1/2" thick, predominately
				silt, sticky, somewhat cohesive, saturated, no odor.
				4.5-5.0' Sand: Brown (7.5 YR 4/3), little silt, little gravel subangular to subround
				up to 2", fine to coarse, predominately fine, poorly sorted, loose, saturated, odor.
20	25	0		No recovery.
25	30	5	1.46-1.90/	0-5.0' Sand: Brown (7.5 YR 4/4), trace fine gravel up to 1" subangular to subround,
			2035-6460	fine to medium grain, little coarse, somewhat sorted, loose, saturated, odor.
30	35	5	2.65-3.83/	0-0.5' Sand: As above.
			2530-23100	0.5-5.0' Sand: Brown (7.5 YR 5/4), fine grain, trace very fine, well sorted, uniform,
				loose, saturated, odor.
35	40	5	1.90-3.63/	0-0.5' Sand: Brown (7.5 YR 5/3), few cobbles up to 4" subangular to rounded,
			2820-5833	fine to medium grain, well sorted, loose, saturated, odor.
				0.5-3.5' Sand: Brown (7.5 YR 5/4), fine grain, trace medium, to coarse, well sorted,

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	3	1.24-14.22/	0-0.7' Fill: Slate.
			9-53	0.7-1.7' Silt: Dark brown (7.5 YR 3/4), topsoil, some organics, rootlets, trace very
				fine sand, loose, damp, organic odor.
				1.7-3.0' Sandy Silt: Dark yellowish brown (10 YR 4/4), some gravel mostly fine up
				to 0.5" angular to subangular, sand is predominately very fine, some fine, trace
				medium to coarse, crumbly, loose, silt compressed into nodules in places, dry,
				no odor.
5	10	3.5	1.69-2.21/	0-0.5' Sandy Silt: As above.
			9-13	0.5-3.5' Silty Sand: Color as above, unit is as above, but with much more sand,
				sand predominately fine, little medium to coarse, poorly sorted, less silt than above,
				loose, damp, no odor.
10	15	4.0	5.38-9.33/	0-0.4' Sand: Light reddish brown (5 YR 6/4), little gravel and cobbles angular to
			175-242	subangular up to 4", very fine to fine grain, trace medium to coarse, well sorted,
				appears arkosic, damp, loose, no odor.
				0.4-3.0' Sand and Silt: Yellowish brown (10 YR 5/4), some gravel, predominately
				fine up to 3" angular to subangular, sand all sizes, predominately very fine to fine,
				very poorly sorted, very silty, color variation throughout, loose, damp, no odor.
				3.0-4.0' Sandy Silt: Dark brown (10 YR 3/3), sand all sizes, predominately very fine
				to fine, some gravel predominately fine up to 2" angular to subangular, very
				similar to unit above, but somewhat siltier and wet, loose, no odor.
15	20	5	1.12-1.25/	0-2.5' Silt with Clay Interbeds: Silt is brown (7.5 YR 4/4), clay is yellowish red
			2910-8430	(5 YR 4/6), silt is predominately smooth, predominately silt, trace very fine sand,
				clay layers varved up to 1", soft, plastic, cohesive, platy appearance on broken
				surfaces, saturated, slight odor.
				2.5-4.5' Silt: Brown (7.5 YR 4/4), some very fine sand in matrix, disturbed from
				drilling, black staining, vesicles, bubbles, sheen, saturated, odor.
				4.5-5.0' Silty Sand: Brown (7.5 YR 4/4), little gravel angular to subangular up to

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5	6.2-13.6/	0-1.0' Fill: Crushed slate/road base.
			16-39	1.0-4.0' Silt: Dark yellowish brown (10 YR 3/6), silt with organic matter, roots/twigs,
				top soil, damp, loose.
				4.0-5.0' Silty Sand: Dark yellowish brown (10 YR 4/6), very fine to fine sand,
				little medium to coarse sand, little gravel angular to subangular, predominately
				fine gravel, but up to 2-1/2", poorly sorted, loose, dry to slightly damp, no odor.
5	10	5	2.7-11.3/	0-1.0' As above, silty sand.
			29-49	1.0-2.5' Sand: Dark yellowish brown (10 YR 4/6), fine sand, little medium to coarse
				sand, some gravel - mostly fine up to 1-1/2" angular to subrounded, loose, no odor,
				trace silt, damp, poorly sorted.
				2.5-3.0' Sand: Brown (7.5 YR 5/4), very fine to fine sand, well sorted, damp, trace
				fine gravel, loose.
				3.0-4.0' Silty Sand: Strong brown (7.5 YR 4/6), very fine to fine sand, little medium
				to coarse, little fine gravel up to 1-1/2" diameter angular to subrounded, loose,
				damp, no odor, poorly sorted.
				4.0-5.0' Silt: Light brown (7.5 YR 6/3), little sand fine to coarse, dry (powdery),
				trace fine gravel subangular to subrounded, gravel up to 1/2", loose.
10	15	1	2.7-2.9/	0-0.25' Silty Sand: As above, in 8.0-9.0, strong brown (7.5 YR 5/8).
			58-82	0.25-1.0' Silt: Strong brown (7.5 YR 4/6), trace clay varved layers, slightly cohesive
				to crumbly, trace gravel, subrounded, trace coarse sand, no odor, damp.
15	20	3.5	1-1.21/	0-3.0' Silt: Grainy, coarse silt, slight trace fine to coarse sand, slight odor, wet,
			1205-3854	loose to slight cohesion, trace black staining.
				3.0-3.5' Sand: Fine sand, trace medium to coarse sand, saturated, slight odor,
				moderately well sorted, loose.
20	22	5	1.9-2.8/	0-1.5' Silty Sand/Gravel: Reddish brown (5 YR 4/3), fine to coarse sand,
			14900-28700	predominately fine, gravel predominantly fine, ranges up to 2-1/2" angular to
				subrounded, poorly sorted, loose, saturated.

				to subround, up to 1", very fine to fine grained predominately, little medium to
				coarse, loose, poorly sorted, very silty, damp, no odor.
5	10	5	9.27-40.46/	0-1.0' Sand and Silt: As above, brown (10 YR 4/3), with addition of cobbles up to
			84-239	6" that are angular/fractured, damp, no odor.
				1.0-4.0' Silty Sand: Dark yellowish brown (10 YR 4/4), little gravel subangular to
				subround up to 3", very silty, sand all sizes, predominately very fine to fine,
				poorly sorted, loose, damp, no odor,
				4.0-5.0' Silt and Clay: Strong brown (7.5 YR 4/4), some gravel subangular to
				rounded up to 2" suspended in matrix, trace sand all sizes, hard, brittle/crumbly,
				looks like till, damp, no odor.
10	15	5	2.09-7.91/	0-5.0' Silty Sand: As above in 6.0-9.0'.
			33-54	
15	20	5	3.20-9.67/	0-3.0' Silt with Clay Interbeds: Silt is brown (7.5 YR 4/4), clay is yellowish red
			83-638	(5 YR 4/6), clay layers varved up to 1", soft, plastic, cohesive, silt is fine/smooth,
				trace very fine to fine sand, probably layers, sample liquifed/distored from
				drilling, saturated, slight odor.
				3.0-5.0' Silt: Brown (7.5 YR 4/3), little clay in matrix, little very fine sand,
				probably interbedded, distorted/liquefied as above, sticky, saturated, black staining,
				slight odor.
20	25	5	2.51-5.93/	0-2.5' Sand: Brown (7.5 YR 5/3), fine grain, trace medium to coarse, well sorted,
			10900-39000	uniform, loose, saturated, odor.
				2.5-4.0' Sand: Color as above, some gravel up to 3"subangular to subround,
				predominately very fine to fine sand, some medium to coarse, poorly sorted, loose,
				saturated, odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5.0	.57-.75/	0-2.0' Silty Sand: Dark yellowish brown (10 YR 4/4), very fine to fine sand, some silt,
			833-20300	trace medium to coarse sand, little gravel up to 3" diameter, most <1" diameter
				angular to subround, loose, very poorly sorted, damp, no odor.
				2.0-2.4' Silty Sand: Black (7.5 YR 2.5/1), very fine to fine sand, trace medium to
				coarse, some silt, loose, wet, trace fine gravel up to 1/4" diameter subround.
				2.4-3.0' Sand: Silty, as above 0-2, saturated.
				3.0-5.0' Silty Sand and Gravel: Brown (7.5 YR 5/2), medium to very coarse sand,
				trace fine sand, some silt, gravel up to 4" diameter, angular to subround, very
				poorly sorted, loose, saturated, no odor.
5	10	5	0.43-0.93/	0-5.0' Silt with Clay Interbeds: Silt brown (7.5 YR 5/3), clay yellowish red (5 YR 4/4),
			1867-4677	silt fine/smooth, layers varved with variable colors to 2" thick, clay has platey
				appearance on broken surfaces, plastic, cohesive, varved to 1-1/2" thick, wet to
				damp, no odor, clay soft to somewhat stiff, hp = 1.0.
10	15	5	0.99-1.45/	0-0.5' Silt: Reddish brown (5 YR 5/3), granular to smooth silt, interbedded with single
			8459-14200	1/4" fine sand seam well sorted, trace clay in smooth/fine silt, slight odor, wet.
				0.5-3.5' Silt: Reddish brown (5 YR 5/3), granular/coarse silt, saturated, little black
				staining throughout, uniform, loose, odor.
15	20	5	0.14-0.68/	0-0.5' Gravel: Variable color, gravel up to 2", angular to subround, no matrix, loose,
			1009-24900	wet, predominately 1/2" diameter.
				0.5-5.0' Sand: Brown (7.5 YR 5/4), very fine to fine sand, trace medium to
				coarse, moderately sorted, saturated, loose, strong odor.
20	25	5	0.83-2.12/	0-2.5' Sand: As above, with trace fine gravel up to 1/2" diameter, subangular to
			27200-101800	subround.
				2.5-3.5' Sand: Color as above, very fine to fine sand, trace medium to coarse sand,
				trace silt, little gravel up to 2" diameter subangular to subround, loose, saturated,
				odor, poorly sorted.
				3.5-4.3' Sand: Brown (7.5 YR 5/4), fine sand, little medium to coarse, moderately

				to poorly sorted, little silt, loose, saturated, odor.
				4.3-5.0' Sand: Color as above, very fine to fine sand, little medium to coarse, trace
				fine gravel up to 1/2" subangular to subround, loose, poorly sorted, saturated,
				odor.
25	30	5	0.81-1.61/	0-1.0' Sand: Brown (7.5 YR 4/4), fine sand, trace very fine, some medium to
			19100-20700	coarse, trace gravel up to 1/2" subangular to subround, loose, very poorly sorted,
				wet, strong odor.
				1.0-2.5' Silt: Brown (7.5 YR 4/4) silt smooth/fine and granular, interbedded trace
				clay layers, varved, soft, silt somewhat cohesive, trace clay in silt, wet, strong odor.
				2.5-5.0' Silt: Reddish brown (5 YR 5/4), granular silt, uniform, black staining, strong
				odor, saturated, loose.
30	35	5	0.83-1.28/	0-1.0' Silt: As above.
			6468-16800	1.0-3.5' Silt: Color as above, smooth/fine silt, loose to slightly cohesive, graded
				from above, wet, strong odor, trace soft clay layers, disturbed from drilling, clay
				layers unrecognizable.
				3.5-4.0' Silt: As above in 27.5 - 30.0.
				4.0-5.0' Sand: Color as above, very fine sand, uniform, loose, wet, strong odor,
				well sorted, graded coarser from above.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5		3.6-20.5/	0-1.0' Sandy Silt: Dark yellowish brown (10 YR 4/4), sandy silt with clay mixed in,
			2570-5410	trace fine gravel, some organic matter, roots, cohesive, damp, sand very fine to
				fine, gravel.
				1.0-2.0' Silty Sand: Dark yellowish brown (10 YR 4/4), very fine sand, trace fine to
				medium sand, trace fine gravel up to 1" diameter subrounded, damp, loose.
				2.0-2.5' Clay: Black (7.5 YR 2.5/1), soft clay, somewhat plastic when worked, trace
				silt giving it a slight crumble, damp.
				2.5-3.0' Silt/Clay/Sand: Olive brown (2.5 Y 4/4), trace fine gravel, sticky, fine sand,
				trace medium to coarse sand, somewhat cohesive, wet.
				3.0-5.0' Silty Sand/Gravel: Dark greenish gray (1 Gley 10 Y 4/1), fine to medium sand,
				some coarse, some fine gravel angular to subround up to 3" diameter, saturated,
				loose/sticky, no odor, very poorly sorted.
5	10	5	11.3-17.6/	0-0.5' Silty Sand/Gravel: As above.
			1840-3115	0.5-1.0' Cobbles: With silt/sand clay matrix, brown (7.5 YR 4/3), subangular to
				subround cobbles in matrix of fine to coarse sand, clay and silt, cobbles 1"-3-1/2".
				1.0-1.5' Sand/Gravel: Very dark gray (7.5 YR 3/1), medium to coarse sand, fine
				gravel up to 1/2" angular to subround, some silt, very poorly sorted, loose,
				saturated.
				1.5-3.0' Gravel: Brown (7.5 YR 4/3), silty, gravel fine to 4" angular to
				subrounded, some sand, matrix fine to coarse, some silt.
				3.0-5.0' Silt: Brown (7.5 YR 5/3), silt granular with trace interbedded clay 1/2" thick
				and trace very fine sand layers trace black staining, no odor, saturated, sticky.
10	15	5	7.1-32.2/	0-1.5' Sand: Brown (7.5 YR 4/4), little silt, very fine sand, well sorted, loose,
			11100-39000	saturated, slight odor, 2" layer at approximately 1' of fine silt laminations with varved
				clay.
				1.5-5.0' Sand: Brown (7.5 YR 5/4), fine sand, trace medium, well sorted, slight
				odor, saturated, loose.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5.0	4.6-9.6/	0-1.0' Silt: Dark brown (10 YR 3/3), silt with some organic matter, roots, loose,
			19-21	damp, trace very fine sand.
				1.0-2.5' Silt: Strong brown (7.5 YR 4/6), silt with trace organic roots, loose to
				damp.
				2.5-3.5' Sand: Dark yellowish brown (10 YR 4/4), very fine to fine sand, trace medium
				to coarse, some fine gravel, subangular to subround up to 4" diameter, most
				under 1", little silt, loose, sample.
				3.5-5.0' Sand: As above yellowish brown (10 YR 5/4), dry, different color.
5	10	5	2.2-3.7/	0-1.0' Sand: As above.
			14-111	1.0-2.0' Sand: Light yellowish brown (10 YR 6/4), fine sand, little medium to
				coarse, loose, damp, little gravel 1/4-4" diameter subangular to subround, clean,
				poorly sorted.
				2.0-2.7' Sand: Dark yellowish brown (10 YR 4/4), very fine to medium sand with
				some silt, predominately fine, little gravel, little coarse gravel subangular to subround,
				most under 1" diameter, but up to 4", very poorly sorted.
				2.7-3.0' Gravel/Silt/Clay/Sand: Dark yellowish brown (10 YR 3/4) cement mix of
				gravel suspended in clay/silt/sand matrix, till like, gravel up to 2" subround,
				predominately silt/clay.
				3.0-4.5' Silt: Brown (7.5 YR 5/4), silt with some sand fine to coarse, little fine
				gravel angular to subround, up to 3" diameter, loose, dry, no odor.
				4.5-5.0' Gravel/Silt/Clay/Sand: As above, made up of mostly
				matrix, variable color throughout, color similar to above silt, very solid.
10	15	5	10.5-36.2/	0-1.0' Gravel/Silt/Clay/Sand: As above, breaks easily when handed, damp.
			114-9063	1.0-2.5' Silt: As above, damp.
				2.5-3.0' Sand: Silty, Strong brown (7.5 YR 5/6) very fine to medium sand,
				predominately fine, trace coarse, little fine gravel most 1" and less, but up to 3"
				diameter subangular to subround, some silt, loose, no odor, damp, very poorly

				sorted.
				3.0-3.7' Silty Sand: Color as above, sand with some silt, predominately fine to
				medium, little coarse, little medium, gravel 1/2-2", trace clay, loose to somewhat
				cohesive, wet.
				3.7-5.0' Silt/Clay/Gravel/Sand: Brown (7.5 YR 4/3), very poorly sorted, sand and
				gravel suspended in clay/silt matrix, crumbly to somewhat cohesive, gravel up to
				3" diameter, subround, sand very fine to very coarse predominately silt and clay,
				till like, saturated, no odor.
15	20	5	0.4-0.53/	0-1.0' Clayey Silt: Brown (7.5 YR 4/4), highly disturbed, may be disturbed/slough
			2800-19200	from drilling, clayey silt with trace gravel up to 2" suspended.
				1.0-3.0' Silt: Brown (7.5 YR 4/4), granular silt, trace medium to coarse sand,
				trace black staining, saturated, slight odor.
				3.0-4.0' Sand: Brown (7.5 YR 4/4) very fine sand, some silt, little fine to coarse
				sand, loose, saturated, slight odor, moderately sorted.
				4.0-4.5' Sand: Fine sand, trace medium to coarse sand, little silt, trace fine gravel
				up to 2", subangular to subround, saturated, loose, slight odor, poorly sorted.
				4.5-5.0' Sand: Fine to medium sand, little coarse trace to little gravel up to 1-1/2"
				diameter, angular to subround, very poorly sorted, some silt, saturated, loose.
20	25	5	1.6-2.1/	0-0.5' Sand: Brown (7.5 YR 4/3), fine sand, trace medium to coarse, poorly sorted,
			50200-162900	trace silt, loose, saturated, odor, trace very fine gravel.
				0.5-2.0' Sand: Fine to very coarse sand, little gravel up to 2" diameter, subround,
				loose, saturated, odor, very poorly sorted, predominately medium sand.
				2.0-3.5' Sand: Brown (7.5 YR 5/2) Fine sand, trace medium to coarse, trace
				gravel subangular to subround, up to 1" saturated, loose, trace very fine,
				moderate sorted, odor.
				3.5-5.0' Sand: As above (0.5-2 of 20-25).
25	30	5	1.2-2.1/	0-3.7' Sand: As above.
			17100-40000	3.7-4.1' Sand: Brown (7.5 YR 4/2), very fine to fine, trace medium to coarse,
				moderately sorted, loose, saturated, odor.
				4.1-5.0' Sand: As above (0-3.7 of 25-30), becomes slightly finer with depth.
30	35	5	1.9-9.8/	0-1.0' Sand: Fine to medium sand, little coarse, little fine gravel up to 1"
			18500-66000	diameter subangular to subround, saturated, loose, odor, very poorly sorted.
				1.0-5.0' Silt: Redish brown (5 YR 4/4), granular silt, uniform, saturated, strong odor,
				loose to somewhat cohesive.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	2.0	.45-2.9/	0-1.0' Silt: Dark brown (10 YR 3/3), silt with organic matter, roots, twigs, loose,
			0-9	damp, topsoil, trace very fine sand, no odor.
				1.0-2.0' Silt: Dark yellowish brown (10 YR 4/4) as above, trace clay, slightly cohesive
				when worked, otherwise loose, no organic matter, damp, no odor.
5	10	5	0.5-1.3/	0-2.0' Silt: As above, dark yellowish brown (10 YR 4/4).
			62-513	2.0-2.5' Silty Sand: Dark gray (2.5 Y 4/1), very fine sand with silt, trace clay, sand well
				sorted.
				2.5-3.0' Silty Sand: Very fine sand, some silt, little fine to coarse sand, little gravel
				mostly fine, diameter up to 4", most under 1/2" subangular to subrounded,
				poorly sorted, trace clay, slight cohesion, wet.
				3.0-5.0' Silt/Clay: Interbeds, silt brown (7.5 YR 4/4), silt/clay interbeds, silt granular
				to smooth, 50/50 silt/clay, silt layers 1/2-2" thick, somewhat cohesive, trace clay in
				silt, clay slightly stiff, soft when worked, platy on broken surfaces, plastic, layers
				up to 3" thick.
10	15	5	1.4-2.3/	0-1.5' Silt/Clay: Interbeds as above, interbeds.
			66-403	1.5-5.0' Silt/Clay: Interbeds, much less clay, grain size of silt varies slightly
				throughout creating laminations, little clay layering up to 1/2" thick, clay soft,
				platey on broken surfaces, plastic when worked, silt smooth-granular, trace very
				fine sand interbeds, well sorted, with silt/clay matrix.
15	20	5	0.1-1.2/	0-1.0' Sand: Brown (7.5 YR 5/3), fine sand, trace medium to coarse, well sorted,
			108-5497	loose, wet, slight odor.
				1.0-2.0' Sand: Brown (7.5 YR 4/4), fine sand, little medium to coarse sand, trace
				fine gravel, subangular to subrounded, poorly sorted, trace silt, loose, slight odor,
				wet.
				2.0-5.0' Sand: Brown (7.5 YR 5/3), very fine to fine sand, trace medium sand, well
				sorted, slight odor, wet, loose.

80	85	5	2.40-2.60/	0-5.0' Silt: As above, except smooth 2-3', more staining and bubbles.
			25100-47200	
85	90	5	1.22-3.65/	0-5.0' Silt: As above, except smooth in places, many vesicles, trace very fine sand
			8955-35000	0-0.5', strong odor.
90	95	0		No recovery, sample fell, some on deck. Appeared silty.
95	115	0		Drillers lost sample. Picked up sample off rig deck. Appeared to be mostly silt as
				above. Bottom 5' appeared to contain some very fine sand.
115	120	5	-0.11-1.94/	0-5.0' Sand: Brown (7.5 YR 4/4), little silt, trace medium to coarse, predominately
			1805-27700	very fine to fine, moderately sorted, loose, saturated, odor, bubbly, vesicles.
120	125	5	1.32-2.91/	0-5.0' Sand: As above.
			4800-78500	
125	130	5	2.0-3.67/	0-2.0' Sand: As above, getting progressively finer.
			38700	2.0-5.0' Silt and Sand: Color as above, silt is very grainy approaching very fine,
			142900	loose, bubbles, vesicles, reddish clayey silt at approximately 4', saturated, odor.
130	135	5	2.05-3.90/	0-4.0' Silt/Sand: As above, with clay layer at approximately 2 feet approximately
			81900-	1/2" thick. Silt is smooth in some places.
			>430000	4.0-5.0' Silt: Brown (7.5 YR 4/3), somewhat grainy to somewhat smooth, trace
				coarse sand, trace gravel subangular to subround up to 1/2", vesicles, loose,
				saturated, odor.
				EOB @ 135'.

Prepared by Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				3.5-5.0' Silt: Reddish brown (5 YR 5/4), very granular silt, approaching size of
				very fine sand, very well sorted, loose, saturated, trace black staining, strong odor.
40	45	5	NA	0-5.0' Silt: As above.
45	50	0		0-5.0' No recovery.
50	55	0		0-5.0' No recovery.
55	60	5	1.73-1.87/	0-5.0' Silt: Reddish brown (5 YR 4/4), trace clay in matrix (probably varves), grainy to
			2731-7000	predominately smooth, somewhat cohesive, methane bubbles, vesicles, trace
				gray to black staining, saturated, strong odor.
60	65	5	1.95-2.06/	0-5.0' Silt: As above, but no clay, predominately grainy silt.
			479-2800	
65	70	5	1.94-2.60/	0-5.0' Silt: As above, more black staining, grainy to smooth, very grainy 1-3,
			579-2871	saturated, strong odor.
70	75	5	2.42-2.90/	0-5.0' Silt: As above, minor grain size variations, some laminations associated with
			1271-2454	minor changes in grain size, grainy to smooth, no staining, slightly cohesive to
				loose, saturated, odor.
75	80	5	2.03-2.72/	0-5.0' Silt: As above, redescribed, reddish brown (5 YR 4/4), grainy to smooth,
			718-3100	predominately grainy, uniform, bubbles/vesicles, trace staining, saturated, loose,
				slightly cohesive, strong odor.
80	85	5	2.03-3.28/	0-5.0' Silt: As above.
			1697-1500	
85	90	5	2.63-3.40/	0-2.0' Silt: As above.
			3700-12100	2.0-3.0' Silt: As above, with addition of some interbedded very fine sand, well
				sorted, some very fine sand in matrix with layers up to approximately 2", is
				predominately silt, loose, saturated, strong odor.
90	95	5	3.13-3.76/	0-5.0' Silt: As above, with little very fine sand.
			10000-34100	
95	100	5	2.69-2.93/	0-5.0' Silt: Reddish brown (5 YR 4/3), predominately smooth, uniform, slightly
			1250-2913	cohesive, saturated, few vesicles, odor.
100	105	5	2.99-2.43/	0-5.0' Silt: As above, but some grain size variation, trace clay (?) odor.
			7900-16900	
105	110	5	3.44-3.79/	0-5.0' Silt: As above, with some very fine sand layers 1-3 up to approximately 3"
			19600-43400	thick, silt laminations due to minor grain size variation, somewhat cohesive, some
				vesicles, saturated, odor.
110	115	5	3.12-3.90/	0-2.0' Sandy Silt: Brown (7.5 YR 4/4), silt as above, with some very fine sand in
			1200-80000	matrix, was probably interbedded, sand well sorted, loose, saturated, odor.
				2.0-4.0' Sand: Brown (7.5 YR 5/2), some silt, very fine grain, well sorted, loose,
				saturated, odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5	-1.6- -1.44/	0-4.5' Silt: Brown (7.5 YR 5/3), some organic matter, rootlets, trace very fine sand,
			3.2-8.4	predominately smooth, slightly cohesive, saturated, wet, humic/organic, odor.
				4.5-5.0' Silt: As above, with some very fine sand.
5	10			No recovery.
10	15			No recovery.
15	20	5	-5.8- -5.7/	0-0.7' Gravel: Brown (7.5 YR 4/4), some sand very fine to very coarse, gravel is
			0-45.3	subround to subangular up to 3", very poorly sorted, loose, some silt, probably
				washed in, saturated, odor.
				0.7-3.0' Silt: Strong brown (7.5 YR 4/6), some very fine sand, little fine to coarse
				sand 1.5-1.8, little coarse sand/fine gravel suspended in silt matrix, little clay in
				matrix, some cohesion, saturated, no odor.
				3.0-5.0' Silt: As above, with no sand or gravel, but addition of clay layering
				varved up to 0.2", fine clay interbedding, clay is yellowish red (5 YR 4/6), plastic, silt
				grainy, somewhat cohesive, saturated, no odor.
20	25	5	-0.11-0/	0-3.5' Silt: With fine clay interbedding as above, also trace very fine to fine silty
			9-124	sand interbedding 1-2, <1" thick, no odor, saturated.
				3.5-5.0' Silty Sand: Brown (7.5 YR 4/3), fine grain, some very fine, very silty, trace
				medium to coarse, poorly sorted, loose, saturated, no odor.
25	30	5	-0.16-0.59/	0-5.0' Sand: Color as above, fine grain, trace silt, trace very fine sand, well sorted,
			490-3734	loose, saturated, no odor.
30	35	5	-0.21-0.86/	0-3.5' Sand: As above, slightly coarser 2.5-3.5' with trace medium to coarse,
			420-3790	no odor.
				3.5-3.7' Silty Sand and Gravel: Color as above, sand very fine to coarse, very
				poorly sorted, gravel subangular to subround up to 2.5", loose, saturated, no
				odor.
				3.7-5.0' Silt: Reddish brown (5 YR 4/3), very granular, trace black staining, loose,
				uniform, saturated, slight odor.

Sample/Core Log (continued)

Boring/Well GMPZC-12 Page 2 of 4

Prepared by Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
35	40	5	-3.77- -3.51/	0-5.0' Silt: Reddish brown (5 YR 4/3), trace coarse sand and gravel up to 1"
			25-37	in matrix, very granular, approaching very fine sand in size, uniform, few vesicles/
				bubbles, loose, saturated, no odor.
40	45	5	-3.51-2.92/	0-5.0' Silt: As above.
			33-53	
45	50	5	-3.82- -2.87/	0-4.0' Silt: as above.
			39-104	4.0-5.0' Sand: Reddish brown (5 YR 5/3), very fine grain, well sorted, uniform,
				loose, saturated, no odor.
50	55	5	3.27- -1.74/	0-1.5' Sand: As above, slight fining downward into grainy silt at 1.5, saturated, no
				odor.
			30-257	1.5-5.0' Silt: With few clay interbeds, silt brown (7.5 YR 4/2), clay yellowish red
				(5 YR 6/4), predominately silt (smooth), some silt laminations, few clay layers <1"
				thick, clay plastic, cohesive, soft, platy appearance on broken surfaces, saturated,
				no odor.
55	60	5	-3.20- -3.10/	0-5.0' Silt: Reddish brown (5 YR 4/3), very grainy, very uniform, trace vesicles,
			14-83	loose, saturated, no odor.
60	65	5	-3.66 - -2.55/	0-5.0' Silt: Brown (7.5 YR 4/3), smooth, some lamination/interbedding of smooth
			137-50	silts, somewhat cohesive, saturated, slight odor.
65	70	5	-3.29- -2.63/	0-2.5' Silt: Reddish brown (5 YR 5/3), grainy, uniform, loose, saturated, slight odor.
			375-3000	2.5-5.0' Silt: Dark reddish gray (5 YR 4/2), smooth, interbedded silts, laminations
				due to very minor grain size variations, slightly cohesive, saturated, trace black
				staining, slight odor.
70	75	5	-3.17-2.09/	0-5.0' Silt: As above, but some grainy 0-2.0, odor.
			415-3781	
75	80	5	3.04- -2.80/	0-5.0' Silt: Reddish brown (7 YR 5/3), smooth, uniform, trace black staining, trace
			72-180	vesicles, slightly cohesive, saturated, slight odor.
80	85	5	-2.59- -2.22/	0-5.0' Silt: As above, with some grainy silt 2-5.
			150-356	
85	90	5	2.71-2.05/	0-5.0' Silt: Reddish gray (5 YR 4/2), some interbedding of well sorted very fine sand
			150-520	(few layers <1" thick), few clay interbeds <1" thick, clay description as above,
				predominately grainy silt, somewhat cohesive, saturated, slight odor.
90	95	5	-2.81- -0.56/	0-5.0' Sand: Reddish gray (5 YR 2/2), very fine grain, well sorted, little silt,
			2510-7180	2.5-4.0, loose, saturated, odor.
95	100	5	-2.81- -2.71/	0-5.0' Sand: Reddish brown (5 YR 5/3), very fine grain, clean, very well sorted,
			1600-2310	loose, saturated, odor.
100	105	5	-3.13 - -2.54/	0-1.5' Sand: As above.
			600-4310	1.5-1.8' Silt: Dark reddish gray (5 YR 4/2), few clay interbeds reddish brown

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				(5 YR 4/3), clay layers approximately 1/4" thick, trace fine to coarse sand, cohesive,
				saturated, odor.
				1.8-5.0' Sandy Silt: Dark reddish gray (5 YR 4/2), predominately very fine sand,
				little medium to coarse, trace gavel subangular to subround up to 1.5" loose,
				poorly sorted, saturated, odor.
105	110	5	-3.07- -2.50/	0-5.0' Sand: Brown (7.5 YR 4/2), fine grain, clean, very well sorted, loose,
			2150-8140	saturated, odor.
110	115	5	-3.11- -2.42/	0-1.0' Sand: Color as above, fine grain, little medium to coarse, poorly sorted,
			2872-6401	loose, saturated, odor.
				1.0-2.0' Silt: Brown (7.5 YR 4/3), smooth, uniform, somewhat loose, saturated,
				odor.
				2.0-5.0' Sand: Brown (7.5 YR 4/2), predominately fine to medium, little very fine,
				little coarse, trace fine gravel, very poorly sorted, clean, saturated, odor.
115	120	5	-1.24 - 11/	0-2.5' Sand: Dark gray (7.5 YR 4/1), predominately fine, some medium to
			4100-6580	coarse, some very fine, some fine gravel subangular to subround, very poorly
				sorted, loose, saturated, odor.
				2.5-4.0' Sand and Gravel: Very dark gray (7.5 YR 3/1), gravel fine up to 1/2"
				angular to subangular, sand all sizes, predominately coarse, very poorly sorted,
				loose, saturated, odor.
				4.0-5.0' Sand: As above in 0-2.5'.
120	125	5	-0.80-0.20/	0-5.0' Sand: Brown (7.5 YR 5/2), trace gravel up to 1" subround in places, very
			2520-6400	fine grain, well sorted, 1.5" thick layer fine grain at 4.8, otherwise uniform, loose,
				saturated, odor.
125	130	5	0.49-1.17/	0-5.0' Sand: Brown (7.5 YR 4/2), very fine sand approaching silt size, well sorted,
			3730-13400	uniform, extremely fine, saturated, odor.
130	135	5	-0.4-0.22/	0-1.0' Sand: Brown (7.5 YR 5/2), very fine to fine grain, trace medium to coarse,
			6196-9020	trace fine gravel, well sorted, loose, saturated, odor, grades into unit below.
				1.0-2.5' Sand and Gravel: Dark gray (7.5 YR 4/1), predominately coarse, some fine,
				some medium, very poorly sorted, gravel mostly fine, subangular, loose, saturated,
				odor.
				2.5-2.7' Sand: Brown (7.5 YR 5/2), predominately fine, some medium coarse,
				poorly sorted loose, saturated, odor.
				2.7-2.9' Gravel: Brown (7.5 YR 4/2), some sand medium to coarse, poorly sorted,
				trace silt, gravel is fine up to 1", angular to subangular, loose, saturated, odor.
				2.9-3.1' Silt: Brown (7.5 YR 4/2), some medium to coarse sand and fine gravel,
				somewhat cohesive, saturated, odor.
				3.1-5.0' Sand and Gravel: Brown (7.5 YR 4/2), sand very fine to very coarse, gravel
				up to 1.5", very poorly sorted, little silt, trace clay, loose, saturated, odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5.0	-0.03-0/	0-5.0' Silt: Very dark grayish brown (10 YR 3/2), trace clay in matrix, trace very fine
			0-0	sand, rootlets, organics, uniform, topsoil, loose, saturated, organic odor.
5.0	10	5	-0.04- -0.03/	0-2.0' Silty Sand: Dark yellowish brown (10 YR 4/6), little clay in matrix, very silty,
			0-0	sand very fine to very coarse, predominately fine, very poorly sorted, little gravel
				fine up to approximately 1/2" subangular to subround, somewhat cohesive,
				saturated, no odor.
				2.0-3.5' Silty Sand and Gravel: Dark yellowish brown (7.5 YR 3/4), little clay in
				matrix, very silty, sand is very fine to very coarse, very poorly sorted, gravel
				angular to subround up to 4", slightly cohesive, saturated, no odor.
				3.5-5.0' Silt: Reddish brown (5 YR 4/4), grainy to smooth, predominately smooth,
				trace clay, some sand interbedding, sand beds are fine to coarse and silty, poorly
				sorted sand layers typically 1" thick or less, more sand 4.5-5.0' with trace gravel,
				subangular to subround.
10	15	5	-0.05-0/	0-0.8' Silt: As above, with one 5" cobble.
			0-0	0.8-5.0' Silt/Clay Interbeds. Silt, brown (7.5 YR 5/4), clay yellowish red (5 YR 4/6),
				alternating fairly uniform interbedding with clay and silt layers ranging from 1/4-1"
				thick, silt is smooth, crumbly, clay is plastic, cohesive, medium stiff, interbedding,
				saturated, no odor.
15	20	5	-0.44 - -0.21/	0-2.5' Sand: Dark brown (7.5 YR 3/4), some gravel angular to subround up to 4",
			848-8060	sand predominately coarse to very coarse, some fine to medium, poorly sorted,
				loose, saturated, no odor.
				2.5-3.5' Sand: Brown (7.5 YR 4/4), trace fine gravel, sand is predominately fine,
				little very fine, little medium, poorly sorted, loose, saturated, no odor.
				3.5-4.5' Sand: As above on 0-2.5'.
				4.5-5.0' Sand: As above on 2.5-3.5'.
20	25	5	-0.49- -0.48/	0-2.8' Sand: Brown (7.5 YR 5/4), trace fine gravel, fine grain predominately,
			560-7002	trace medium to coarse, well sorted, loose, saturated, no odor.

Sample/Core Log (continued)

Boring/Well GMPZC-13

Prepared by Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				2.8-4.8' Sand: Brown (7.5 YR 5/3), trace gravel subangular to subround up to 2",
				trace silt, predominately fine grain, some medium to coarse, poorly sorted, loose,
				saturated, no odor.
				4.8-5.0' Silt: Reddish brown (5 YR 5/4), grainy, uniform, loose, saturated, slight
				odor.
25	30	5	-0.31-0.11/	0-5.0' Silt: As above.
			2005-11500	
30	35	5	-0.18- -0.11/	0-5.0' Silt: As above with trace black staining in places.
			2690-7011	
35	40	0		No recovery.
40	45	3		0-3.0' Silt: As above, but some is smooth, sample fell onto rig deck, picked up and
				put in bag.
45	50	5	-0.74- -0.62/	0-5.0' Silt: As above, reddish brown (5 YR 4/3), grainy, uniform, trace black
			4118-17600	staining, vesicles, loose, saturated, odor.
50	55	5	-6.75- -0.61/	0-5.0' Silt: As above, smooth 4.5-5.0.
			2326-20000	
55	60	5	-0.69- -0.65/	0-5.0' Silt: As above, reddish brown (5 YR 4/3), grainy to smooth, predominately
			3770-25400	smooth, trace black staining, uniform, vesicles, saturated, odor.
60	65	5	-0.64-0.08/	0-5.0' Silt: As above.
			13400-23800	
65	70	5	-0.67- -0.28/	0-5.0' Silt: As above.
			5230-13500	
70	75	5	-0.96 - -0.58/	0-5.0' Silt: As above, all very grainy.
			8865-19700	
75	80	5	-0.67- -0.47/	0-5.0' Silt: As above, but smooth, brown (10.5 YR 4/3), uniform, trace black
			4224 -15300	staining, vesicles, saturated, odor.
80	85	5	-0.54- -0.46/	0-5.0' Silt: As above.
			8430-31000	
85	90	5	-0.65- -0.1/	0-5.0' Silt: As above.
			7630-18500	
90	95	5	-0.34- -0.06/	0-5.0' Silt: With some interbedded sand layers, silt, brown (7.5 YR 4/3), sand,
			7000-16300	brown (7.5 YR 5/3), predominately silt, some very fine sand layers up to 2" thick
				interbedded, well sorted, trace clay layering varved up to 1/4" thick, clay
				yellowish red as above, silt predominately smooth, saturated, odor.
95	100	5	-0.51- -0.47/	0-5.0' Silty Sand: Brown (7.5 YR 4/3), very fine grain, well sorted, very silty,
			7403-26900	uniform, loose, saturated, odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (in)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
0	2	2	1,2,2,2	0-0.8": Silt. Very dark greyish brown (10 YR 3/8), organic-rich layer upper 4"
				(abundant grass clippings, rootlets, small twigs), some very fine to fine sand,
				trace to some clay, some black mottling throughout, crumbly, dry.
				0.8-2": Silt. Brown (7.5 YR 4/4), very sandy (very fine, trace fine), trace to
				some clay, cohesive, dry.
2	4	2	1,3,2,2	0-1.3': Silt. Very sandy, as above.
				1.3-2': Silt. Dark yellowish brown (10 YR 4/4), trace to some very fine sand,
				trace clay, moderately dense (H.P. = 1.75 - 2), cohesive, dry (sand content
				increases as you go down section).
4	6	2		0-2': Silt. As above but very sandy silt has from approximately 4-8", dry.
6	8	2		0-2': Silt. Reddish brown (5 YR 4/3), with clay lenses within, (clay, reddish brown
				(2.5 YR 4/4), clay is moderately dense, nonplastic), sandy to very sandy (very
				fine) (encountered saturated conditions at approximately 0.7'), cohesive, some
				clay.
8	10	1.75		0-1.75': Silt. Saturated sandy, as above with clay lenses.
10	12	1.75		0-1.25': Sandy Silt. With clay lenses as above.
				1.25-1.75': Silt. Brown (7.5 YR 4/2), with 5-10 mm thick clay layers (clay is
				reddish brown (5 YR 4/4) nonplastic, moderately dense), stiff becomes sandy
				lower 2-3" of interval, sand is very fine to fine, well rounded and sorted, damp
				to wet.
12	14	2		0-2': Silt. With clay as above, no sand content. (Silt is moderately dense to
				dense, tight)
14	16	1.25		0-1.25': Silt. Dark reddish brown (5 YR 3/3), sandy (very fine, some fine), some
				clay to clayey, moderately dense, saturated.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
0	5	5	1.9-22/	0-2' Silt: Very dark brown (7.5 YR 2.5/3), lots of organics rootlets, trace gravel,
			9.41-18.43	subrounded to subangular up to 1.5 inches, loose.
				2-5' Silt: Strong brown (7.5 YR 5/6), trace fine to coarse gravel, subrounded to
				subangular, loose, dry.
5	10	5	3.4-34/	0-1' Silt: Strong brown (7.5 YR 4/6) lots of very fine sand, trace to some gravel
			5.77/8.99	fine to coarse, subangular to subrounded, loose, moist, no odor.
				1-2' Sand/Gravel: Color as above, sand mostly fine grained gravel, fine to coarse,
				angular to subrounded up to 2", some silt, moderate sorting, moist, loose,
				no odor.
				2-5' Silt/Clay: Silt is brown (7.5YR 5/1), clay is yellowish red (5 YR 5/6), silt is very
				clayey firm and somewhat plastic, clay is plastic but fissile looking on broken surface,
				slight reaction to HCl (silt and clay), interbedding is approximately 1/8 to 1"
				thick of silty/clay, moist, no odor.
10	15	5	128-	0-3.8' Silt: Reddish brown (5 YR 5/3), some to lots of very fine sand, soft, somewhat
			11,000/	loose, clay laminations at 3 feet, clay as above, wet.
			6.55-7.35	3.8-5.0' Sand: Light brown (7.5 YR 6/3) sand fine to medium with some coarse,
				loose, saturated, odor.
15	20	5	780-	0-1' Sand: Brown (7.5 YR 5/1) sand fine to medium, some coarse, silty (in
			3,400/	nodules) silt is slightly clayey, trace fine to coarse gravel subrounded to
			6.22-6.73	subangular, up to 1.5", loose, wet, slight odor.
				1-2.5' Sand: Pinkish gray (7.5 YR 6/2), sand medium with some to lots of coarse,
				trace gravel, fine to coarse, subrounded to subangular, up to 2 inches, loose, wet.
				2.5-5.0' Sand/Gravel: Brown (7.5 YR 5/3) sand is medium to coarse, gravel is fine
				to very coarse, subrounded to angular, trace cobbles to 2 inches, very poorly
				sorted, loose, wet, odor.
20	25	3	1,310-	0-0.5' Sand: Pinkish gray (7.5 YR 6/2) fine to medium, well sorted, wet, loose,
			6,300/	odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
			7.11/8.5	0.5-1.0' Sand/Gravel: Brown (7.5 YR 4/2), sand medium to very coarse,
				gravel mostly fine, angular to subrounded, cobbles to 3 inches, poorly sorted,
				wet, loose, odor.
				1.0-2.0' Sand: Pinkish gray (7.5 YR 6/2) medium to coarse, wet, loose, strong
				odor.
				2.0-3.0' Sand/Gravel: Color as above, sand coarse to very coarse, gravel fine
				to coarse, angular to subrounded, cobbles up to 2 inches, very silty very
				poorly sorted.
25	30	5	1,100-	0-1' Sand/Gravel: As above.
			7,900/	1-4' Clayey Silt: Reddish brown (5 YR 5/4) slightly cohesive and plastic, slightly
			10.06-15.6	firm to firm. HP = 2.0 trace clay (laminations up to 1/2 inch thick), clay, light
				reddish brown (5 YR 6/4), fissile appearance but plastic, wet, clay laminae may
				be at contact with below.
				4-5' Sand/Silt: Reddish brown (5 YR 5/4) very fine grain sand to sandy silt, moist,
				somewhat loose, odor.
30	35	5	2,610-	0-1' Sand/Silt: As above.
			13,200/	1-1.7' Silt: Reddish brown (5 YR 5/4) clay (like clayey silt as above), slightly plastic,
			15.91-	wet, odor.
			18.94	1.7-5.0' Silt: Light reddish brown (5 YR 6/3) "grainy," no clay, moist, slight odor.
35	40	5	3,400-	0-1.5' Silty Clay: Reddish brown (5 YR 5/3) clay sticky and smooth, plastic, wet,
			11,600/	odor, at 1.5' thin hard clay layer approximately 1" thick, fissile in
			8.66-9.06	appearance but plastic.
				1.5-5.0' Silt: Color as above, no clay, "grainy appearance" somewhat firm to
				loose, wet, odor.
40	45	3	9,400-	0-2' Silt: As above.
			13,400/	2-3' Silt: As above, grading into increasing amounts of very fine sand.
			12.33-	
			14.5	
45	50	5	2,190-	0-1' Sand: Light reddish brown (5 YR 6/3), very fine grain, well sorted, trace silt,
			8,330/	loose, wet, odor.
			8.51-9.45	1-3' Sand: Color as above, fine grain, well sorted, trace silt, loose, wet, odor.
				3-5' Sand: Color as above, very fine to fine, trace silt, well sorted, loose, wet,
				odor.
50	55	5	6,620-	0-2' Sand: Color as above, very fine, well sorted, some silt, trace fine sand, wet,
			13,800/	loose, odor, grading into below.

			10.16-	2-4' Silt: Color as above, loose, very sandy with very fine grain sand, wet, odor,
			10.93	grading into below.
				4-5' Silt: Reddish brown (5 YR 4/3), somewhat grainy, no clay, slightly firm to
				somewhat firm, loose, wet, some vesicles.
55	60	5	3,670-	0-5' Silt: Reddish brown (5 YR 5/3), grainy, soft, somewhat loose, wet, odor, at
			8,524/	approximately 4.9' becomes less grainy, finer silt size.
			-1.3/-1.6	
60	65	5	2,120-	0-1' Silt: As above.
			10,800/	2-3' Silty: As above becoming more "clay rich" and clayey silt, sticky, slightly
			0.1/1.2	plastic.
				3-4' Silt: color as above, very sandy, sand very fine grain, soft, somewhat loose.
				4-5' Clayey Silt to Silty Clay: Color as above, trace black sand, slightly plastic and
				soft.
65	70		3,125-	0-0.5' Silt/Clay: As above.
			>76,900/	0.5-3.0' Silt: Color as a above, some clay, slightly sticky, slightly plastic, somewhat
			-2.7 - -3.3	firm, wet, odor.
				3-4' Silt: Color as above, no clay (grainy appearance as above).
				4-5' Sand: Reddish brown (5 YR 5/3) very fine grain, some silt, well sorted, wet,
				odor.
70	75	5	7,400-	0-0.5' Sand: As above.
			15,900/	0.5-3.5' Silt: Color as above, "grainy", no clay, trace black staining, wet, odor.
			-1.3-1.2	3.5-4.0' Sand: As above, very fine grain.
				4-5' Silt: Reddish brown (5 YR 5/4) grainy, no clay, wet, odor.
75	80	5	900-	0-5' Silt: Color as above, "grainy", slightly sandy (very fine grain) in places,
			6,400/	wet, odor, vesicles.
			-3.8 - -4.4	
80	85	5	1,624-	0-3.5' Silt: As above, trace black staining.
			7,600/	3.5-4' Sand: Reddish brown (5 YR 5/4) fine to very fine sand, well sorted,
			-3.65 -	trace silt.
			-3.4	4-5' Silt: As above, some areas of "grainy silt" mixed with some of smooth silt,
				vesicles.
85	90	5	1,650-	0-5' Silt: color as above, "grainy" to smooth silt, traces of thin interbeds (laminae
			5,800/	of very fine to fine sand with trace medium), wet, odor (many of medium flakes are
			-7.7 - -6	black slate flakes), many vesicles.

Sample/Core Log (continued)

Boring/Well GMPZ-8

Prepared by Bruce Evans and Paul Lenaker

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
90	95	5	1,629 -	0-5' Silt: As above, trace fine to very fine sand, at 3.0 feet trace black staining, trace
			5,800/	to some vesicles, lone stone at 4.5 feet - 2 inches long x <1/4 inch wide (flat).
			-6.6 - -6.3	
95	100	5	1,300-	0-3' Silt: As above with traces of very fine to fine sand (thin seams). At 3 feet
			3,420/	clay seam approximately 1-inch thick, yellowish red (5 YR 5/6), fissile in appearance
			-10 - -9	but plastic, slightly hard, extremely effervescent with HCl, slightly sticky, below clay
				is approximately 1 inch sand very fine to fine, fairly moderately sorted.
				3-5' Silt: Reddish brown (5 YR 4/4) no clay, not grainy, slightly plastic, wet,
				odor, possible varving/laminations.
100	105	5	3,200-	0-5' Silt/Sand: color silt as above, color sand reddish brown (5 YR 5/3)
			9,600/	predominately silt with sand interbedded approximately 0.5-2.5 inch thick,
			-9 - -8	sand is fine grain, some medium grained, and some very fine grain, poorly sorted,
				individial interbeds are different grain sizes (one is fine to some medium/one is very
				fine to fine grain).
105	110	5	410-950/	0-0.5' Sand: Brown (7.5 YR 4/3) fine to very fine grain, well sorted, very silty,
			-12 - -11	wet, odor.
				0.5-1.5' Clay: Yellowish red (5 YR 4/6) sticky, plastic, interbedded with silt, but
				interbeds destroyed from drilling.
				1.5-4.0' Sand: Brown (7.5 YR 4/3) fine to very fine grain, some silt, loose, wet,
				odor.
				4-5' Silt: Brown (7.5 YR 5/4), some clay, slightly sticky, wet, odor.
110	115	5	380-4,320/	0-4' Silt/Clay: silt reddish brown (5 YR 5/3), clay yellowish red (5 YR 4/6), silt
			-11 - -10	interbedded <1.8" to 1.5 inches, silt is clayey, slightly plastic, soft, slighty
				effervescent in HCl, clay is fissile in appearance and brittle looking, but plastic
				when worked at, effervesses in HCl readily.
				4-5' Sand: Brown (7.5 YR 5/2), fine grained sand, some very fine, well sorted.
115	120	5	52-570/	0-0.5' Silt/Clay: Interbedded as above.
			-13	0.5-1.5' Sand: Fine grain, as above.
				1.5-2.0' Silt/Clay: Interbedded, as above.
				2.0-4.0' Silt: Interbedded clayey silt and grainy silt, clayey silt is dark reddish gray
				(5 YR 4/2) silt (grainy) is brown (7.5 YR 5/2) silt and clayey silt is interbeded/varved up
				to 1 inch thick, soft to sticky, clayey silt is plastic, silt is slightly plastic, wet, no odor.
				4.0-5.0' Sand: Brown (7.5 YR 5/3), very fine sand, well sorted, silty, somewhat
				loose.
120	125	5	2,700-	0-2.7' Sand: Color as above, very fine grain, well sorted, some fine, loose, wet.
			9,100/	2 inch silt seam at 1.2 feet. 1 inch silt seam at 2.5'.

Prepared by Bruce Evans and Paul Lenaker

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
				4.5-5.0' Sand: Color as above, fine to very coarse grain, some gravel, subrounded
				to subangular, fine to coarse, many black slate flakes, some silt, loose, wet,
				no odor.
25	30	5	10-67/	0-5.0' Sand: Brown (7.5 YR 4/3) predominately medium grain with fine to coarse
			-4.8 - -4.6	grain, gravel fine to coarse, subrounded to subangular, some cobbles up to 4 inches
				subrounded to round, poorly sorted, loose, wet, no odor.
30	35	5	99-405/	0-1.0' Sand: As above.
			-4.55 - -4.2	1.0-3.0' Sand: Light brown (7.5 YR 6/3) fine to medium grain, well sorted,
				predominately fine grain, loose, wet, no odor.
				3-3.4' Sand: As above, with fine to coarse gravel angular, much of it is black slate
				flakes, loose, wet, no odor.
				3.4-4.6' Sand: Color as above, fine to medium grained, well sorted, after 4.0-
				4.6 feet, unit becomes less well sorted and coarser grained, loose, wet, no odor.
				4.6-5.0' Sand: Reddish brown (5 YR 5/4) very fine grain, well sorted, loose,
				wet, no odor.
35	40	5	45-1,070/	0-1.0' Sand: Reddish brown (5 YR 4/4), very fine to fine grain, well sorted, silty,
			-5.2 - -4.3	loose, wet, no odor.
				1.0-5.0' Sand: As above, but only very fine grain.
40	45	5	622 -	0-3.0' Sand/Silt: Reddish brown (5 YR 4/4), sand very fine grain, silt "grainy",
			1,028/	well sorted, loose, wet, trace to some odor.
			-4.3 - -4.25	3.0-5.0' Silt: Color as above, silt is "grainy" somewhat loose, wet, odor.
45	50	5	110-	0-3.0' Silt: As above, trace black staining.
			2,050/	3.0-5.0' Silt: As above, interbedded with clayey silt, 1 to 2 inch thick, reddish gray
			-4.4 - -4.3	(5 YR 5/2), sticky, slightly plastic, wet, odor.
50	55	5	2,120-	0-5.0' Silt: Reddish brown (5 YR 5/4), grainy, sandy, very fine, well sorted, some
			7,750/	what firm, some to trace black staining, wet, odor.
			-3.1 - -2.35	
55	60	5	480-	0-1.0' Silt: As above.
			1,330/	1.0-2.0' Silt: Reddish brown (5 YR 5/4), clayey, somewhat to slightly plastic, wet,
			-7.6 - -7.2	somewhat firm, no odor.
				2.0-5.0' Silt: Reddish brown (5 YR 4/4) grainy, somewhat loose, no clay, wet,
				no odor.
60	65	5	950-	0-2.0' Silt: As above, grainy.
			3,450/	2.0-4.0' Silt: As above, interbedded to varved with clayey silt, reddish brown
			-6.9 - -6.7	(5 YR 5/3), somewhat plastic, soft, somewhat firm HP = 1.25.
				4.0-5.0' Silt: As above, grainy, no clay.

65	70	5	2,600 -	0-5.0' Silt: Reddish brown (5 YR 5/4), grainy, sometimes some very fine sand,
			11,100/	somewhat loose, wet, odor.
			-4.8 - -1.6	
70	75	5	5,400-	0-3.5' Silt: As above, grainy, some very fine sand.
			16,700/	3.5-5.0' Silt: Reddish brown (5 YR 5/4) less grainy, no very fine sand, black
			-4.8 - -1.6	staining, somewhat firm, wet, strong, odor.
75	80	5	2,000-	0-1.0' Silt: As above.
			3,400/	1.0-5.0' Silt: As above (interbedded to varved with clayey silt), vesicles.
			-8 - -7.02	
80	85	5	3,580-	0-1.0' Sand: Reddish brown (5 YR 5/3) very fine grain, silty, somewhat loose,
			3,900/	wet, odor.
			-6.6 - 5.7	1.0-5.0' Silt: Reddish brown (5 YR 4/4) somewhat grainy, nonplastic, somewhat
				loose, wet, strong odor, many vesicles.
85	90	5	3,000 -	0-5.0' Silt: Color as above, silt as above but less grainy and very slightly clayey,
			18,500/	not plastic, many vesicles, wet, strong odor.
			-6.6 - -5.9	
90	95	5	650-6,020/	0-5.0' Silt: As above, more clayey, slightly plastic, strong odor, many
			-7.05 -6.15	vesicles.
95	100	5	940-2,700/	0-4.5' Silt: As above, in places less clayey.
			-7.9 - -7.8	4.5-5.0' Sand: Brown (7.5 YR 4/3), fine grain, well sorted, silty, loose to slightly
				sticky, odor.
100	105	5	2,300-	0-3.0' Sand: As above, less silty, some very fine grain.
			19,000/	3.0-3.4' Silt: Reddish brown (5 YR 4/4), clayey, slightly to somewhat plastic,
			-7.4 - -7.1	somewhat firm, wet, odor.
				3.4-3.8' Silt: Brown (7.5 YR 4/3), grainy, trace very fine sand, somewhat loose, wet,
				odor.
				3.8-4.0' Silt/Clay: Silt is reddish brown (5 YR 5/3), clay is yellowish red (5 YR 4/6)
				interbedded to varved, silt is grainy to nongrainy, clay interbed at 4.0' fissile looking,
				plastic, moderate reaction with HCl.
				4.0-5.0' Silt/Silt: Reddish brown (5 YR 5/3), clayey, sticky to somewhat plastic,
				interbedded with silt, gray (7.5 YR 6/1), loose, slightly grainy.
105	110	5	3,730 -	0-0.5' Silt/Silt: As above.
			31,400/	0.5-4.0' Silt/Sand: Brown (7.5 YR 5/3), very fine silty sand grading to sandy silt
			-8.2 - -7.3	(grainy), somewhat loose, wet, odor.
				4.0-5.0' Silt: Color as above, trace of yellowish red clay at 4.0 feet, trace
				coarse sand, trace fine gravel, somewhat loose, wet, odor.

Prepared by Bruce Evans and Paul Lenaker

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
			-4.4-6.3	4.0-5.0' Silt: Reddish brown (5 YR 4/3), no clay, very sandy with very fine grain
				sand, somewhat loose, wet, strong odor.
75	80	5	1,820-	Silt: Reddish brown (5 YR 4/4) somewhat loose, soft (HP = 0.5) trace clay to no
			15,300/	clay in matrix, interbedded reddish gray clay, as above 2 to 2.5 feet, wet, very
			-9.6/3.5	strong odor, many vesicules.
80	85	5	18,700-	0-3.0' Silt: As above, no clay, trace very fine grain sand 1 to 2 feet.
			25,200/	3.0-5.0' Silt/Clayey Silt: Silt reddish brown (5 YR 4/4) varved with reddish gray
			-6.3-+1.9	clayey silt (5 YR 3/2) becoming somewhat firm, crumbly (HP = 1.25) clayey silt,
				very effervescent with HCl, wet to very moist, very strong odor vesicules where
				softer.
85	90	5	17,600-	0-5.0' Silt: Reddish brown (5 YR 4/4) somewhat loose to soft, no clay in matrix, many
			19,200/	vesicules, trace clay interbedded 3 to 3.2 feet, slightly sandy with very fine sand
			-8 - -4.8	4 to 5 feet, wet, very strong odor.
90	95	5	13,400-	0-0.5' Silt: As above, sandy from 0.8 to 1 feet, clayey from 2 to 4 feet, wet, very
			-17,700/	strong odor.
			-7.6 - -5.5	
95	100	5	19,100-	0-3.0' Silt: as above, wet very strong odor, vesicules.
			40,300/	3.0-4.0' Silt: Very sandy with very fine sand, wet, very strong odor.
			-8 - -6.2	4.0-5.0' Silt: Clayey, interbedded with reddish gray clayey silt, as above, wet,
				very strong odor.
100	105	5	42,500-	0-1.0' Silt/Clay: Interbedded as above, very dense brittle at 0.8 to 1.0 feet.
			76,900/	1.0-5.0' Silt: Reddish brown (5 YR 4/3) somewhat loose to soft, very sandy with
			-8.0	very fine grain sand 3.5 to 5 feet, wet to very moist, very strong odor.
105	110	5	8,240-	0-3.0' Silt: As above.
			9,340/	3.0-5.0' Silt/Clay: Varved as above, reddish brown and reddish gray, overall soft
			-9 - -7.5	to slightly plastic, wet, very strong odor, many vesicules.
110	115	5	16,000-	0-5.0' Silt/Clay: Apparently varved as above, but destroyed by drilling, very clayey,
			20,700/	very abundant vesicules.
			-9 - -7.4	
115	120	5	4,910-	0-4.0' Silt: Reddish brown (5 YR 4/3) soft, somewhat loose, some very fine grain
			6,940/	sand, wet, odor.
			-11 - -9	4.0-5.0' Silt: Clayey, somewhat plastic wet, odor, bescules traces varving with
				clayey yellowish red at 5.0 feet.
120	125	5	17,100-	0-1.0' Silt: Clayey as above.
			46,300/	1.0-5.0' Sand: Brown (10 YR 4/3) fine grain, some very fine, well sorted loose,
			-9 - -5.5	1 inch silt seam at 2.0 feet, silt seam at 3.8 to 4.0 feet, reddish brown (5 YR 4/3)

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
				slightly firm, wet, odor.
125	130	5	3,440-	0-1.0' Silt: Reddish brown (5 YR 4/3) soft, slight plastic, clayey and sandy with
			3,600/	very fine sand, wet, vesicules, odor.
			-10 - -8	1.0-1.5' Sand: Dark grayish brown (10 YR 4/2) fine grain, well sorted, loose, wet,
				odor.
				1.5-2.0' Silt: Reddish brown (5 YR 4/3) very sandy with fine to very fine grain
				sand, some clay, loose but sticky, wet, odor.
				2.0-3.0' Sand: Dark grayish brown (10 YR 4/2) fine grain, some medium grain,
				well sorted, loose, wet, odor.
				3.0-4.0' Silt: Reddish brown (5 YR 4/4) soft, slightly clayey, 1 inch clay seam at
				4 feet, yellowish red (5 YR 4/6) plastic but fissile looking on broken surfaces,
				vesicules, wet, odor.
				4.0-5.0' Silt: Reddish brown (5 YR 4/3) clayey, slightly plastic, wet, odor.
130	135	5	23,700-	0-0.2' Silt: As above.
			33,100/	0.2-0.5' Sand: Dark grayish brown (10 YR 4/2), fine grain, well sorted, trace medium
			-8.0 - 9.4	to coarse grain, 0.5 inch thick silt at 0.5 feet, loose, wet, odor.
				0.5-1.0' Sand: Dark grayish brown (10 YR 4/2) fine to very coarse grain, poorly
				sorted, trace fine to coarse gravel, loose, wet, odor.
				1.0-1.5' Silt: Reddish brown as above, somewhat firm, no clay.
				1.5-2.0' Sand: Dark grayish brown (10 YR 4/2) medium to coarse, some fine,
				moderately poor sorting, trace fine to coarse gravel, angular to subrounded,
				many black slate flakes, loose, wet, odor.
				2.0-2.5' Sand: Brown (7.5 YR 4/3) fine grain, well sorted, trace coarse black
				slate flakes, loose, wet, odor.
				2.5-5.0' Sand: Dark grayish brown (10 YR 4/2) fine to coarse grain, some
				very coarse, trace fine gravel, mostly angular black slate flakes, poorly sorted,
				loose, wet, odor.
135	140	5	4,510-	Sand: Brown (7.5 YR 4/3) fine grain, well sorted, some medium grain, loose, wet,
			4,551/	odor.
			-10 - -9	
140	145	5	6,220-	0-2.0' Sand: As above, fine to medium grain.
			10,200/	2.0-3.5' Sand: Brown (7.5 YR 4/3) fine grain, well sorted, loose, wet, odor.
			-10 - -8.6	3.5-5.0' Sand: Dark grayish brown (10 YR 4/2) fine to medium grain, some coarse
				grain, coarser from 4 to 5 feet, trace silt, moderately sorted loose, 1 inch silt seam
				at 3.5 feet, wet, odor.

Boring/Well GMPZ-10

Prepared by Bruce Evans and Paul Lenaker

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
145	150	5	546-	0-2.0' Sand: Medium to coarse brown (7.5 YR 4/2) farily well sorted, some fine grain,
			16,200/	trace very coarse, mostly black slate flakes, loose, odor, wet.
			4,100-	2.0-3.5' Sand: Fine to coarse, brown (7.5 YR 4/3) very poorly sorted, very silty,
			14,000	loose, somewhat sticky, wet, grades over 2 to 3.5 feet into.
				3.5-5.0' Sand: Fine, color as above, very silty, well sorted, some medium-coarse sand,
				slightly sticky to loose, wet, odor, 1.5 inch silt seam at 3.8 feet, may be
				some clay.
150	155	5	16,500-	0-4.0' Sand: Fine, color as above, some very fine, well sorted, loose, wet, odor,
			28,000/	some seams of lighter sand and black staining at 2.5 to 3.0 feet and is silty
			672-992	sand and very fine to fine sand, color as above, from 0 to 1 feet very silty as above.
				4.0-5.0' Sand: Fine to very fine grain, brown (7.5 YR 5/3), well sorted, trace
				silt, wet, loose, no odor.
155	160	5	5,200-	0-3.0' Sand: Fine to very fine, as above.
			46,000/	3.0-3.5' Silt: Brown (7.5 YR 5/3) slightly firm to soft, wet, odor, clay layer interbedded
			14.5-17.5	at 3.2 feet 1 inch thick, yellowish red (5 YR 4/6), fissile looking on broken surfaces
				but plastic, strong reaction to HCl, sharp contact with below.
				3.5-4.0' Gravel/Sand: Gravel is fine to very coarse, sand is fine to coarse, brown
				(7.5 YR 4/2), silty to very silty, poorly sorted, gravel angular to subrounded, loose,
				wet, odor grades into.
				4.0-5.0' Sand/Gravel: Both fine to very coarse grain, dark gray (7.5 YR 4/1) poorly
				sorted, silty, gravel angular to subrounded, abundant black slate flakes, trace
				cobbles, wet, odor, poorly sorted.
160	165	5	15,400-	0-3.5' Silt: Reddish brown (5 YR 5/3) clayey 1/2 inch interbeds/varves at contact and
			33,700/	intermixedd in matrix, HP = 0.5 to 1.0, very slightly plastic to not plastic
			38.86-	many vesicules, wet to very moist, odor, traces of interbedded yellowish red clay
			41.96	as above up to mm or less in thickness.
				3,5-5.0' Silt: Light reddish brown (5 YR 6/4), loose, some to trace interbeds of
				(< mm thickness) clay as above, from 4.5-5.0 feet.
165	170	5	670-8,200/	0-5.0' Sand: Very fine, light reddish brown (5 YR 6/3), well sorted, trace fine sand,
			-4.3	trace silt, slightly firm, wet, odor.
			6.67	
170	175	5	820-	0-5.0' Sand: Very fine as above, slightly more fine sand fraction below 174 feet,
			38,900/	wet, odor, trace silt.
			-1.42 -	
			-1.15

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
	~2			Organic material (rootlets, twig material) with fine to medium sand.
	~5			Sand: Light brown to brown, fine to medium, trace silt.
	~10-12			Sand: Fine to medium, some very fine silt, trace clay (may be mud?).
	~15			Sand: As above.
	~20			Sand: Fine, some to abundant medium, some to abundant very fine/silt,
				(sand is showing fining trend as you go downhole).
	~22-23			Sand: Medium to very coarse, trace to some fine gravel (~2 mm), trace clay/
				silt content.
	~24-27			Sand: Medium to coarse, trace to some very coarse, some fine gravel (~2 mm),
				(sand appears to fine downward matrix is mainly medium sand-gravel content
				decreasing).
	~31-32			Sand: Medium, some very fine to fine, some coarse, trace gravel.
	~35			Sand: Medium to coarse, some finer constituents (very fine sand/silt).
	~36-37			Sand: Very fine to medium, some silt.
	~40			Sand: Very fine to medium, much less recovery so increase silt/clay content.
	~41			Sand: Very fine to fine, still some medium to coarse content but finer grained,
				with increased silt content.
	~44			Sand: Very fine to medium, trace coarse, some silt to abundant silt.
	~48			Sand: As above (perhaps slightly coarser).
	~50			Sand: Very fine to coarse, with some gravel (probably not in-situ, mixed with
				drilling muds).
	~52			Silt/Clay: (numerous cohesive balls in sample), some to abundant sand (fine to
				medium, some coarse, some very fine).
	~54			Silt: With sand, as above.
	~55			Sand: Very fine to fine, with silt/clay (medium to coarse sand still present from
				above sections).

Sample/Core Log (continued)

Boring/Well GMEW-4 Page 2 of 2

Prepared by John Keller

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
	~56-57			Silt/clay: (balls present), some sand (very fine to fine, some medium), coarser
				sand that is present is from above.
	~59-60			Sand/silt: Very fine, trace to some clay, trace fine sand (coarse sand is no longer
				present in drilling mud).
	~61			Silt/clay: (numerous fine-grained balls present) with some very fine sand.
	~63-64			Silt/sand: Very fine, some fine sand, trace medium sand.
	~66			Silt/clay intermixed with very fine to fine sand.
	~69-70			Silt/clay: As above.
	~74			Sand: Silty (very fine, trace to some fine) with clay.
	~77			Sand: As above.
	~82			Silt: With some very fine to fine sand intermixed (some coarse sand also present
				but probably from higher up in section).
	~88			Silt/sand: Very fine.
92	94	0	8,8,10,11	No recovery, lower 1/2' on outside of spoon appeared to be silt/clay composition.
	~95-96			Silt: Some very fine to fine sand, trace to some clay present.
97	99	1	8,9,10,13	0-1': Silt: Reddish brown, some clay, some to abundant sand (very fine) (sand
				content increases down section), moderately dense to dense, "tight" silt,
				wet to saturated, moderately hard, odor.
102	104	1	9,8,9,11	0-1': Sand: Dark grayish brown, fine to medium, some very fine, perhaps trace
				coarse, some silt, trace clay, trace rock fragments (slate?), moderately to well
				sorted, cohesive, wet, well rounded.
107	109	1.4	9,11,13,15	0-1': Sand: Grayish brown, medium to coarse, trace to some very fine to fine,
				trace very coarse, trace silt/clay content, moderately sorted, well rounded, wet
				to saturated.
				1-1.4': Sand: Reddish gray, very fine, trace fine, abundant silt, trace clay, very
				well sorted and rounded, slightly cohesive, wet.
112	114	1	7,13,13,15	0-1': Sand: Reddish gray, fine to medium, some coarse (at top of interval) sand
				seems to fine down section, trace very coarse (also near top of interval), trace to
				some clay, some silt to silty (silt content increases down section) poorly to
				moderately sorted, well rounded, slightly cohesive, saturated.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
0	155	--	--	Blind drill: See core log for GMPZ-10 for description.
155	160	5	610-6,000/	0-2.5' Sand: Brown (7.5 YR 5/3) fine to coarse grain, predominately medium
			1.74-2.35	grain, loose, moderate sorting, trace fine gravel subround to subangular up to
				1/2", wet, odor, grading over 1/4 to 1/2 inch into
				2.5-3.0' Sand: Color as above, fine to very fine sand, loose, wet.
				3.0-4.0' Silt/Sand: Color as above, silt is crumbly to soft, sand very fine grain and
				occurs as interbeds <1/2 inch thick, moist, odor.
				4.0-5.0' Sand/Gravel: Brown (7.5 YR 4/2), sand fine to coarse, predominately
				medium grain, gravel fine to very coarse, cobbles up to 2.5 inch, subround to
				subangular, some to much silt, loose, wet, odor, very poorly sorted, much of
				gravel is subangular black slate flakes. Cobble layer at approximately 5.0 feet
				2-inch thick.
160	165	5	690-8,200/	0-1.0' Sand/Gravel: As above.
			1.62-2.39	1.0-2.0' Gravel: Color as above, gravel fine to very coarse, some cobbles up to
				1.5 inch subround to subangular, very silty, wet, loose, poorly sorted, odor.
				2.0-5.0' Silt: Brown (7.5 YR 4/4), silt is somewhat clayey, somewhat plasticy, soft
				to slighlty firm clay interbedds, yellowish red (5 YR 4/6), clay is platy/friable in
				appearance, but plastic when worked between fingers, interbeds up to
				1 foot thick, moist, odor.
165	170	5	2,100-	0-1.3' Sand: Brown (7.5 YR 5/2), silty, very fine grain, slightly firm to loose,
			11,800/	moist, odor, trace gravel fine to medium subangular to subround from
			2.39-2.59	1 to 1.3 feet.
				1.3-3.5' Silt/Sand: Brown (7.5 YR 5/3) somewhat firm to crumbly at upper 1.3-1.6
				feet, somewhat grainy silt and 1.6 to 3.0 feet is not, from 3.0 to 3.5 feet somewhat
				sandier with fine sand to grainy silt, moist, odor.
				3.5-5.0' Sand: Brown (7.4 YR 5/3), very fine grain, some silt, well sorted,
				loose, moist, odor.

Boring/Well GMEW-7

Prepared by Bruce Evans and Paul Lenaker

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
170	175	5	6,800-	0-3.0' Sand: Color as above, very fine to fine grained, mostly very fine grain,
			17,800/	loose, moist, odor.
			2.52-2.98	3.0-5.0' Sand: Brown (7.5 YR 4/3), fine grain well sorted, some very fine sand,
				loose, moist, odor.
175	180	5	300-9,450/	0-4.0' Sand: Brown (7.5 YR 4/4) fine to medium grain well sorted, loose, wet,
			1.84-3.66	odor, trace silty clayey nodules at 3.5 feet.
				4.0-4.5' Silt: Brown (7.5 YR 4/3) clayey, platey, friable in appearance, trace
				medium to very coarse sand, crumbly, moist.
				4.5-5.0' Sand: Color as above, fine to medium grain, fairly well sorted, some clayey
				silt nodules as above at 3.5 feet, some dark gray in color with medium to coarse
				sand in nodules, loose, wet, odor.
180	185	5	4,800-	0-1.0' Sand: Color as above, fine to medium grain fairly well sorted, loose, wet,
			12,500/	odor, may have silt nodules brown (7.5 YR 4/3) but maybe from above and
			2.94-3.88	pushed by sample drive.
				1.0-2.5' Sand: Color as above, fine to medium, loose, moderately sorted, some
				silt, abundant clay nodules as above, some slight firm to slightly soft.
				Possibly interbedded clay layers, wet.
				2.5-3.5' Silt/Silt: Three different interbeds, grainy silt gray (7.5 YR 5/1)
				nongrainy silt = reddish brown (5 YR 4/3); interbedded over 1/4 to 1/2", highly
				effervescent with HCL, trace coarse sand and fine gravel to 1/2 inch within silts,
				curmbly to fairly firm.
				3.5-4.5' Sand: Brown (7.5 YR 4/3), very fine to coarse grain some silt, poorly
				sorted, some fine to coarse gravel, cobbles up to 1.5 inch, subround to
				subangular, loose, wet, odor.
				4.5-5.0' Silt/Gravel: Color as above, like interbedded silt as above, fine to
				coarse gravel interbedded in silt matrix, some cobbles up to 1.5 inch round to
				angular, poorly sorted, wet, odor.
185	190	5	1,500-	0-5.0' Sand: Brown (7.5 YR 4/3) medium to fine grain, well sorted, loose, wet,
			16,500/	odor.
			2.54-3.2	
190	195	5	2,300-	0-0.5' Sand: As above.
			22,800-	0.5-2.7' Sand: Pinkish gray (7.5 YR 6/2), fine to very fine, well sorted, some to
			2.49-3.03	trace silt, loose, wet, odor. Bottom 0.5 feet grades into mostly very fine
				grain, some to more silt.
				2.7-3.4' Sand: Color as above, very fine, well sorted, silty, loose, wet, odor.
				3.4-3.7' Silt: Reddish brown (5 YR 5/3), somewhat firm to crumbly, moist, odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5	-2.13- -1.30/	0-3.0' Sand and Gravel: Strong brown (7.5 YR 5/6) from 0-2.0 and brown
			3.88-586	(7.5 YR 5/6) from 2.0-3.0, fill material, sand very fine to very coarse, predominately
				very fine to fine, gravel subangular to subround up to 3", poorly sorted, loose,
				no odor.
				3.0-3.3' Sand and Gravel: As above, but black, no odor.
				3.3-5.0' Sand and Gravel: Strong brown (7.5 YR 4/6), some silt, gravel angular to
				subrounded to 1", sand very fine to very coarse, poorly sorted, loose, no odor.
5	10	5	0.07/2.98	0-2.0' Sand and Gravel: Dark brown (7.5 YR 3/3), little silt, mostly gravel subround
			1186-4800	to 4", sand very fine to very coarse, predominately coarse, poorly sorted, loose,
				saturated, no odor.
				2.0-5.0' Silt/Clay Interbeds: Silt is reddish brown (5 YR 5/3) clay is yellowish red
				(5 YR 4/6), very uniform interbedded 2.0-3.5' with 1" thick clay layers and 1.5-2"
				silt layers, silt is smooth, clay is plastic, but platy appearance on broken surface, HP
				= 2.5 clay content decreases below, clay layers are varved to approxiamtely 0.2"
				thick 3.5-5.0, overall form, cohesive, moist to wet, trace black staining, odor.
10	15	5	-1.27-3.26/	0-1.5' Silt/Clay: Interbeds as above, with clay layers ranging from varved to 1.5"
			1150-7000	thick, trace black staining, cross lamination visible in silt layers, trace very fine sand
				in places, unit grades into silt layer below.
				1.5-3.0' Silt/Clay: Interbeds with some sand, unit is distorted from drilling but was
				probably finely interbedded with very fine sand lense, mostly silt layers, a few clay
				as above, layers, black staining, staturated/liquified from drilling, sticky, mushy,
				odor, grades into section below.
				3.0-5.0' Sand: Brown (7.5 YR 5/3) fine grain, trace medium to coarse, trace silt?
				possibly washed in from above, well sorted, loose, saturated, odor.
15	20	5	-0.90-1.81/	0-5.0' Sand: Brown (7.5 YR 5/3), fine grain, trace very fine in places, very well
			3173-25700	sorted, trace fine subangular gravel in places, loose, strong odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5	1.64-3.05/	0-1.5' Fill: Crushed slate, road material.
			4.32-6.52	1.5-5.0' Silt and Sand: Dark yellowish brown (10 YR 4/6), trace gravel subround
				to 1.5", organics, rootlets, topsoil, very fine sand and grainy silt, well sorted,
				uniform, loose, moist, organic odor.
5	10	5	1.64-82/	0-1.5' Sand/Silt/Clay/Gravel: Dark greenish red (1 Gley 3/1), sand predominately very
			12.67-101	fine to fine, trace medium to coarse, gravel subangular to subround to 1.5", silt
				grainy to smooth, clayey, sticky, poorly sorted mixture, somewhat cohesive, wet,
				odor.
				1.5-5.0' Silt/Clay: Interbeds silt is brown (7.5 YR 3/3), clay is yellowish red (5 YR 4/2),
				1.5-2.2 is silt dominated with about 5 clay layers 0.2" thick, 2.2-5.0 is clay
				dominated with uniform layers approximately 1.2" thick sepected by approximately
				0.5-1" silt layers, silt is smooth, possibly clayey, clay has fissle appearance on broken
				surface, but plastic, cohesive, HP = 1.5, nice interbedding, overall firm and
				cohesive, moist, slight odor.
10	15	5	1.03-1.44/	0-1.5' Silt/Clay: Interbeds as above, but less clay content with clay layers varved to
			45.6-720	0.5".
				1.5-3.0' Sand/Silt/Clay: Interbedded brown (7.5 YR 4/4), predominately very fine to
				fine sand with silt in matrix, but a few distinguishable smooth silt layers 0.5" thick,
				1mm thick clay layer at 2.8 (clay appears as above), slight coarsening of sand 1.5-3.0
				grading into unit below, trace clay in matrix, trace black staining and vesicles,
				distorted from drilling, but probably interbedded, loose to slightly cohesive
				overall, saturated, odor.
				3.0-5.0' Sand: Brown (7.5 YR 4/3), predominately fine grain, trace silt, moderately
				to well sorted, trace to little very fine, trace coarse, trace fine subround gravel,
				loose, saturated, odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5	109.7-5253	0-1.5' Fill: Crushed slate.
				1.5-4.0' Silt: Very dark grayish brown (10 YR 5/2), with some yellowish brown
				mottling, topsoil with organics, rootlets, trace very fine sand, smooth, soft,
				cohesive, wet, no odor.
				4.0-5.0' Sand: Gray (10 YR 5/1), some silt, little fine gravel, sand predominately
				very fine, little fine to coarse, moderately sorted, dark greenish gray staining 4.0-
				4.2, loose to slightly cohesive, wet, odor.
5	10	5	2953-	0-1.0' Sand: As above, with fine gravel, very fine grading into coarser sand unit
			50600	below.
				1.0-5.0' Sand and Gravel: Brown (7.5 YR 4/2), silty, but possibly washed in from
				above, sand very fine to very coarse, gravel subround to approximately 1.5", poorly
				sorted mixture, less gravel 4.5-5.0', loose, saturated, odor.
10	15	5	5799-	0-2.5' Sandy Silt and Clay: Silt/sand matrix is brown (7.5 YR 5/3), clay interbeds are
			120,300	yellowish red (5 YR 5/6), silt grainy to smooth, clay layers distorted from drilling
				but appears vared 1" thickness, sand very fine to medium, trace coarse to
				very coarse and fine gravel, possible from above, clay appears fissle/platy yet
				plastic, somewhat cohesive, sticky, saturated, odor, grades into sand unit below.
				2.5-5.0' Sand: Reddish gray (5 YR 5/2), silty 2.5-3.0, then pretty clean below,
				predominately fine to medium grain, trace to little very fine and coarse,
				predominately coarse 3.5-4.0, moderately well sorted, loose, saturated, odor.
15	20	5	8.6-9.2/	0-1.0' Sand: Brown (7.5 YR 4/4) trace silt, little subround gravel to 1" especially
			1110-25000	1.5-2.0', sand predominately fine, some medium in places, trace very fine,
				moderately well sorted, loose, saturated from drilling fluid, slight odor
				1.0-5.0' Sand: Brown as above very fine to fine grain, trace medium to coarse, well
				sorted, loose, saturated, uniform, slight odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
20	25	5	5.88-7.34/	0-5.0' Sand: Brown (7.5 YR 5/3), trace subround gravel to 1", predominately fine,
			23700-42300	but little medium in places, trace very fine to coarse, slightly coarser 1.0-1.5 and 3.0-
				5.0 with predominately fine to medium, predominately medium grain 4.5-5.0,
				overall uniform sample with some grain, size variation in places, loose, wet, odor.
25	30	5	8.66-10/	0-1.5' Sand: Brown (7.5 YR 4/4), fine to very coarse, predominately medium, poorly
			8200-24000	sorted, little fine gravel subround, loose, wet, odor.
				1.5-4.0' Sand: Brown (7.5 YR 5/3), trace to fine gravel, predominately fine, trace
				very fine, trace coarse, moderately to well sorted, loose, wet, odor.
				4.0-5.0' Sand: As above in 0-1.5.
30	35	5	7.88-11.98/	0-5.0' Sand: Brown (7.5 YR 5/3), predominately fine to medium grain, trace very
			8400-21000	fine, trace coarse, trace fine gravel subround to approximately 0.5", predominately
				coarse 0-0.3 and coarse seam 1" thick and 4.0, moderately well sorted, loose, odor.
35	40	5	1.94-7.40/	0-1.5' Sand: Brown (7.5 YR 4/2), predominately medium to coarse, little to some
			1180-10100	fine, trace very coarse, trace gravel angular to subround up to 1", coarse gravelly
				layer 1.3-1.5 with subround to round gravel up to 2.0, moderately well sorted,
				loose, wet, odor, grades into unit below.
				1.5-5.0' Sand: Brown (7.5 YR 5/3), very very fine sand, approaches grainy silt,
				medium size, trace very fine sand in places, uniform, well sorted, loose, wet, odor.
40	45	5	1.56-1.97/	0-4.5' Sand: As above trace black staining.
			2.47-458	4.5-5.0' Silt: Reddish brown (5 YR 4/4), very grainy, uniform, loose, wet, slight
				odor.
45	50	5	1.25-3.27/	0-5.0 Silt: As above, very grainy, uniform, saturated drilling fluid, slight odor.
			3.27-6.41	
50	55	5	1.64-8.67/	0-5.0' Silt: As above, reddish brown (5 YR 4/3), but grading into finer/smoother silt
			2.16-16.67	trace, also trace clay in matrix below 2.0, silt breaks fissily, loose to somewhat
				cohesive, some vesicles, saturated, trace black staining, odor, trace very fine sand
				3.0-4.5, crumbly and dry 3.0-4.5.
55	60	5	1.09-11.99/	0-5.0' Sand/Silt: Reddish brown (5 YR 4/4) very grainy silt, very very fine sand,
			2.45-20.16	borderline, uniform, saturated from drilling fluid, vesicles, slightly cohesive to
				loose, no odor, slight coarsening toward very fine sand 4.0-5.0.
60	65	5	0-1.08/	0-5.0' Sand/Silt: Brown (7.5 YR 4/4) as above, but somewhat coarser, much of it
			2.07-4.77	is very fine sand, but still close to grainy silt size, wet, no odor.
65	70	5	1.35-3.05/	0-5.0' Sand/Silt: As above, but grades down section into predominately very fine
			3.19-7.19	sand at 5.0, well sorted, loose, silty, same material as above, but slight coarsing
				down section, wet, odor.
70	75	5	2.20-13.4/	0-5.0' Sand/Silt: As above, slightly finer overall then 65-70, moist, loose to crumbly,
			4.76-23.66	trace black staining, no odor.
				EOB @ 75 feet.

			0.62-1.52	0.25-1.0' Silt: Dark brown (7.5 YR 3/3), smooth, rootlets, wire, soft to crumbly,
				organic, moist.
				1.0-1.5' Silt/Sand: Dark brown (7.5 YR 3/4), very fine sand, loose, uniform, moist.
				1.5-2.5' Silt: Same as 0.25-1.
				2.5-3.0' Silt/Sand: Strong brown (7.5 YR 5/6), very fine sand, loose, uniform, moist.
5	10	5	5.02-104/	0-1.0' Silt: Dark brown (7.5 YR 3/3), little clay, trace roots, very soft, uniform,
			0-0.57	plastic, no odor, saturated.
				1.0-2.0' Silt: Strong brown (7.5 YR 5/6), trace very fine sand, trace clay, calico mix
				of yellow and brown, very soft, slightly sticky, no odor, saturated.
				2.0-3.0' Silt: Dark greenish gray (2 Gley 3/1)- 2-2.75 feet, dark greenish gray
				(1 Gley 4/1)- 2.75-3 feet, trace to little very fine sand, trace subrounded gravel,
				grades to very fine sand with silt from 2.75-3.0 feet, breaks into fine crumbs, very
				soft, sticky, strong organic odor, saturated.
				3.0-5.0' Silt/Clay: Yellowish red (5 YR 4/6)-clay, brown (7.5 YR 4/3)-silt, interbedded,
				soft to stiff, fissily, crumbly when worked, platy clay, plastic clay, clay-varve to 1 inch,
				silt-1-2.5 inches, closer together from 4-5 feet, saturated.
10	15	5	680-1050/	0-2.0' Silt/Clay: As above, clay- 1 to 2 inches, silt-0.5 to 1 inch, uniformly layered,
			0-5.01	clay layers predominate.
				2.0-3.0' Silt: Brown (7.5 YR 4/4), little to some clay, clay melded in from drilling,
				slightly fissily, stiff to crumbly, strong organic odor, saturated.
				3.0-5.0' Silt: Brown (7.5 YR 4/4), trace clay, smooth to grainy silt, somewhat
				plastic, sticky in areas, fairly uniform, jumbled from drilling possible-don't see clay
				layers, soft, liquified where more grainy, trace black staining, organic odor, saturated.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	4.5	1.87-4.50/	0-1.0' Fill: Slate pieces/silt/sand.
			5.7-16.8	1.0-2.0' Silt: Dark reddish brown (5 YR 4/4) topsoil, organic rich silt, grainy, rootlets,
				etc., loose, crumbly, moist, no odor.
				2.0-4.0' Silt: Topsoil as above, but wet and darker in color, very dusky red
				(2.5 YR 2.5/2)
				4.0-4.5' Sand: Yellowish brown (10 YR 5/8) very fine, trace fine, well sorted,
				loose, trace subround fine gravel, no odor, moist.
5	10	5	82-1.92/	0-2.0' Silty Sand: Dark reddish brown (5 YR 3/4), grainy silt, some gravel subround
			2.5-7.8	to 3.5", sand predominately very fine, but little fine to very coarse, poorly sorted,
				slightly cohesive, loose, wet, no odor.
				2.0-5.0' Silt: With some clay. Silt dark yellowish brown (10 YR 4/6), trace very fine
				to fine sand throughout, much clay layering approximately 2" thick 2.0-3.0, clay
				varves throughout, little clay in matrix, silt is predominately smooth, soft, clay is
				yellowish red (5 YR 4/6) plastic, trace fine gravel, subround throughout, especially
				2.0-2.5', 6" thick sand seam 4.0-4.5 with silty sand as in 0-2.0 above, cohesive
				overall, soft, mushy, wet to saturated, no odor.
10	15	5	0.48-1.84/	0-1.0' Silty Sand: As above, with some fine subround gravel, soft, grading into siltier
			2-5.5	at 1.0, grades into unit below.
				1.0-5.0' Silt/Clay Interbeds: Silt dark reddish brown (10 YR 4/4), clay is yellowish
				red (5 YR 4/6), trace very fine sand, clay layers vaved to 1" but distorted from
				drilling, silt is majority of matrix with approximately 1-4" between clay layers, silt
				grainy to smooth, breaks, fissile, overall somewhat cohesive, sticky, clay plastic, but
				fissile appearance, somewhat crumbly in places, fairly uniform layering, wet, no odor.
15	20	5	1.54-4.09/	0-5.0' Sand: Reddish brown (5 YR 4/4), fining from predominately fine to medium
			4914-10200	at 0.0 to very fine to fine at 5.0, gradual fining down section, trace subround
				gravel to 1" 0-3.0, trace medium throughout, moderate to well sorted, loose,
				saturated, odor.

Prepared by Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
20	25	5	2.44-6.71/	0-5.0' Sand: Reddish brown (5 YR 4/4), predominately fine, slight coursing down
			2045-12000	section, trace subround gravel up to 0.5", trace medium to very coarse, some
				medium 3.5-5.0', loose, wet, odor.
25	30	3	2.22-4.78/	0-5.0' Sand: As above, predominately fine, trace gravel as above, some medium,
			10000-54000	trace very fine and coarse, coarser layer at 4.0', 4" thick, loose, saturated, odor.
30	35	5	2.77-5.0/	0-5.0' Sand: As above, predominately fine, but coarser in a few places where
			9000-40000	predominately medium, moderately well sorted, loose, odor.
35	40	5	-8.5-1.3/	0-3.0' Sand: As above, fine to medium, trace very fine, trace coarse to very coarse,
			512-1845	trace subangular to subround gravel to 0.5", moderately sorted, loose, saturated
				from drilling fluid, odor.
				3.0-5.0' Silt: Reddish brown (5 YR 4/4), trace coarse sand, distorted from drilling
				and saturated/liquefied from drilling fluid, mushy, grainy to smooth, slick, looks
				uniform, odor.
40	45	5	.92-1.57/	0-5.0' Silt/Sand: Reddish brown (5 YR 5/4) borderline very grainy silt/very fine
			1428-10200	sand, trace to little very fine sand, uniform sample, except wet to saturated
				0-3.5', and damp to moist 3.5-5.0', also very slight to cohesive 0-3.5' and more
				loose to crumbly 3.5-5.0', could have been fine interbedding of very fine sand
				and silt, vesicles 0-3.5', odor.
45	47	2	-8.6-2.04/	0-1.0' Silt/Clay Interbeds: Silt is brown (7.5 YR 4/3), clay is yellowish red, as above,
			31-102	layers are disturbed from drilling, but appear to be varved to approximately 0.5"
				in thickness, clay is plastic, somewhat cohesive, moist, slight odor.
				1.0-2.0' Pulivesed rock, greenish gray glay (5 GY 5/1) some large pieces up to 3",
				subangular, phyllite, bedrock pieces, hard drilling, white veins, vertical foliation,
				dense, dry, no odor.
47	52	5		0-5.0' Bedrock core. Solid core of phyllite with many white veins and vertical
				folation, dense, hard, greenish gray fracture along folation lines.
52	67	15		0-15.0' Bedrock: As above.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5	6.02-9.72/	0-2.0' Silt: Dark reddish brown (5 YR 3/4), topsoil, trace very fine to very coarse sand,
			143-230	trace subangular to subround gravel to 1", organics, rootlets, soft, loose, crumbly,
				moist, organic odor.
				2.0-5.0' Sand and Gravel: Brown (7.5 YR 4/4), sand predominately fine, trace very
				fine, medium, coarse, gravel angular to subround to 2", moderately to well
				sorted sand, loose, moist, no odor.
5	10	5	4.63-5.30/	0-2.0' Sand: Brown (7.5 YR 5/4), trace subangular to subround gravel, especially
			830-2227	1.5-2.0, sand fine, trace medium to coarse, well sorted sand, loose, moist, no odor.
				2.0-2.5' Sand and Gravel: Very dark gray (7.5 YR 3/1), little silt, sand very fine to
				very coarse, gravel angular to subround to 1", poorly sorted mixture, loose, moist
				to wet, no odor.
				2.5-5.0' Sand: As above in 5.0-7.0.
10	15	5	4.84-9.51/	0-2.0' Silt: With some clay, silt is brown (7.5 YR 4/4) clay is yellowish red (5 YR 4/6)
			11.50-1560	predominately silt matrix, silt is smooth to grainy, mostly smooth, some clay
				interbedding/varving up to 0.2" thick, trace black staining, somewhat cohesive,
				soft, uniform, wet, odor.
				2.0-5.0' Silt/Clay Interbeds: As above, but much more clay content, clay appears
				platy/fissile yet plastic as above, clay layering varved to 1.5" thick, much is
				distorted from drilling, uniform interbedding 3.0-4.5 with thickest clay layers, less
				clay 4.5-5.0, overall somewhat cohesive, somewhat crumbly, moist, odor.
15	20	5	1.34-1.87/	0-1.5' Silt/Clay: As above in 10-12, but more black staining, silt brown (7.5 YR 4/4),
			113-2533	silt is grainier, approaching very fine sand, some very fine sand, clay varving, layers
				destroyed by drilling, saturated, liquified from drilling fluid, odor, grades over
				approximately 0.5' into unit below.
				1.5-5.0' Sand: Brown (7.5 YR 4/3) sand is fine, but approaching medium grain
				in size, trace medium grain, very well sorted, uniform, clean sand, loose, saturated,
				odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
20	25	5	3.72-4.14/	0-5.0' Sand: As above, trace subround gravel to 0.5", slightly finer in places but
			10700-11300	still fine grain, well sorted, odor.
25	30	5	2.6-4.12/	0-2.0' Sand: As above, trace fine gravel, fine grain, grades into coarser
			3440-42400	at 2.0.
				2.0-3.0' Sand: Brown (7.5 YR 4/3), fine to coarse grain, predominately medium,
				little subangular to subround gravel to 1.5", moderately sorted, loose, saturated,
				odor.
				3.0-5.0' Sand: Brown (7.5 YR 4/4), very fine to fine grain, very well sorted,
				uniform, clean sand, loose, saturated, odor.
30	35	5	3.77-4.65/	0-5.0' Sand: As above in 28-20', very fine to fine grain, predominately fine 1.5-2.5,
			11700-20000	well sorted, uniform, clean, saturated, odor.
35	40	5	3.45-4.45/	0-5.0' Sand: Brown (7.5 YR 5/3), fine grain, but approaching very fine grain in
			7200-	size, very well sorted, uniform, clean, loose, saturated, odor.
			>150000	
40	45	5	3.29-4.01/	0-5.0' Sand: As above in 35.0-40.0
			13200-131500	
45	50	5	2.82-4.60/	0-5.0' Sand: Very fine grain, very close to as above, but slightly finer, very well sorted,
			4400->151000	uniform, clean, loose, saturated, odor.
50	55	5	5.47-7.12/	0-5.0' Sand: As above, but slightly coarser 4.0-4.5, predominately fine 4.0-4.5,
			19000-	trace medium 4.0-4.5', then very fine 4.5-5.0, otherwise as above, odor.
			>151000	
55	60	5	5.07-6.10/	0-5.0' Silt/Sand: Reddish brown (5 YR 4/3), very very fine sand approaching very
			22400-140500	grainy silt size, borderline, well sorted, loose, uniform, saturated, odor.
60	65	5	4.18-11.45/	0-3.0' Silt/Sand: As above, but grading into slightly coarser with predominately
			7019-20000	very fine at 3.0, also trace fine to medium grain 2.0-3.0.
				3.0-5.0' Silt: Reddish brown (5 YR 4/3), grainy silt, little very fine sand, probably
				from a very fine sand layer 1-2" thick at approximately 3.5, trace black staining,
				vesicles, slightly cohesive to loose/crumbly, saturated, odor.
65	70	5	3.89-7.67/	0-5.0' Silt/Sand: Reddish brown (75 YR 4/3), probably interbedded grainy silt/very
			1172-27200	fine sand, but distorted from drilling, well sorted, very fine sand, loose to slightly
				cohesive, saturated, odor.
70	75	5	3.09-4.64/	0-1.0' Silt/Sand: As above.
			1100-23200	1.0-4.0' Silt with clay: Reddish brown (5 YR 5/3), was finely interbedded with
				varved clay layers yellowish red, but distorted from drilling, silt is brown (7.5 YR 4/3),
				sticky, somewhat cohesive, hard to distinguish layering, saturated, odor.
				4.0-4.7' Interbedded Silt: two different silts, one is brown (7.5 YR 4/2) and clayey,

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5	21.5-224/	0-2.5' Silt: Dark reddish brown (5 YR 3/4) grainy, loose, trace to little organics,
			10-49	(roots) trace gravel to 1.5" subround to subangular, trace medium sand, moist, no
				odor.
				2.5-2.8' Silt: As above, no organics and color changes to dark yellowish red
				(10 YR 4/6).
				2.8-5.0' Sand: Dark yellowish red (10 YR 3/6) very fine to coarse, predominately very
				fine to fine grain, trace to little gravel to 4" subround to subangular, somewhat
				sorted, loose, moist, no odor.
5	10	5	82-119/	0-4.0' Sand: As above, becoming predominately fine at 3' with less gravel.
			40-227	4.0-5.0' Silt: Yellowish red (5 YR 4/6) smooth, trace to little coarse sand and gravel
				to 1" subround to subangular, trace clay in matrix, somewhat crumbly, somewhat
				cohesive, moist to wet, no odor.
10	15	5	31-69/	0-1.0' Silt: As above.
			16-24	1.0-2.5' Silt: Color as above, approaching very fine sand in places, grainy, trace to
				little gravel up to 1" subround to subangular, somewhat loose to somewhat
				cohesive/crumbly, moist to wet, no odor.
				2.5-4.0' Silt: Brown (7.5 YR 4/4) smooth to somewhat grainy, clay laminae <1/4"
				thick, yellowish red (5 YR 4/6), cohesive and plastic, moist to wet, no odor, trace
				black staining.
				4.0-5.0' Silt: As above, with little to some gravel up to 2.5" subround to subangular.
15	20	5	-2.08- -0.75/	0-1.0' Silt: As above, with gravel.
			125-31000	1.0-3.0' Silty Clay/Clayey Silt: Reddish brown (5 YR 4/3) smooth to grainy with
				some to little clay in matrix but clay also in laminae approximately 1/2" thick,
				yellowish red (5 YR 4/6), sticky, somewhat cohesive, somewhat plastic, wet, no odor,
				grades over 0.5' into section below.
				3.0-4.0' Sand/Silt: Brown (7.5 YR 4/4), very fine grain boarders grainy silt, somewhat
				loose, well sorted, wet, some odor, (organicy?).

0	5	1.5	5.79-7.42/	0-0.5' Sand/Silt: Brown (7.5 YR 4/4) smooth silt and very fine to fine grain sand,
			5.54-6.09	trace medium, moderate well sorted, trace fine to coarse gravel up to 1" diameter,
				subangular to subround, somewhat loose, organics, (roots/grass) moist, no odor.
				0.5-1.0' Silt: Strong brown (7.5 YR 4/6) smooth silt, soft, somewhat loose, moist,
				no odor.
				1.0-1.5' Sand: Brown (7.5 YR 4/4) very fine to coarse grain, silty, very poorly
				sorted, some fine to coarse gravel up to 2" diameter, angular to subangular,
				loose, moist, no odor.
5	10	2.5	-2.08--.63/	0-0.7' Sand: As above.
			-.99--.48	0.7-1.1' Sand: Brown (7.5 YR 4/4) fine grain, trace medium, well sorted, no silt,
				loose, moist, no odor.
				1.1-1.5' Sand: As above (1.0-1.5 of 0-5') one cobble 4" diameter
				1.5-4.0' No recovery.
				4.0-5.0' Sand: As above (1.0-1.5 of 0-5').
10	15	5	-1.05--3.48/	0-5.0' Silt/Clay: Silt brown (7.5 YR 4/3) clay yellow red (5 YR 4/6) intebedded
			-1.05--1.26	smooth silt and clay, silt is soft, very clayey and plastic, clay is very soft, plastic,
				layers varved 1/2" thick; fine to coarse from 0-0.2, up to 2" diameter angular to
				subround, little sand fine to coarse grain from 4.0-5.0' overall, moist to wet at
				bottom, no odor.
15	20	5	330-1110/	0-2.0' Silt/Clay: as above, little fine to coarse grain sand.
			-1.32--1.39	2.0-3.5' Silt/Sand: Brown (7.5 YR 5/3) interbedded smooth silt, grainy silt, and
				very fine silty sand, bedding is jumbled, can't discern thicknesses, smooth is
				clayey/plastic, grainy is somewhat loose, and very fine silty sand is well sorted
				and somewhat loose; overall wet, slight odor.
				3.5-4.0' Silt: Brown (7.5 YR 5/3) grainy, somewhat loose, wet, odor.
				4.0-5.0' Sand: Light brown (7.5 YR 6/3) fine grain, well sorted, no silt, loose,
				strong odor, wet.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				trace angular to subangular gravel up to 2" in diameter, clay seam 1" thick,
				trace clay throughout.
				1.25-5.0' Sand: Brown (7.5 YR 4/3), very fine sand, loose, trace silt, well sorted,
				trace gravel up to 1" in diameter, silt amount varies throughout, thus greater
				cohesion in some areas.
80	85	5	1.5-2.9/0	0-3.0' Sand: Brown (7.5 YR 4/4), fine to medium sand, trace coarse sand, trace
				subrounded gravel, well sorted, uniform, coarsens with depth, last 6" medium
				sand, saturated.
				3.0-4.0' Silt/Clay: Silt brown (7.5 YR 4/3), clay reddish brown (5 YR 4/4), interbedded
				silt and clay, silt soft to crumbly, trace very fine sand, 0.25-0.5" clay layers, silt
				0.5-2" layers, clay plastic, sand pocket of medium sand with trace coarse 2" thick,
				silt fissile, moderate cohesion, saturated.
				4.0-5.0' Silt/Clay/Sand: Silt and sand brown (7.5 YR 5/3), clay reddish brown
				(7.5 YR 4/4), silt intertwined with clay, some gravel, fine to coarse sand, gravel
				angular to subrounded 0.25-2" in diameter, fissile silt, swirled along length, poorly
				sorted sand.
85	90	5	2-7/0	0-0.5' Sand/Gravel: Reddish brown (7.5 YR 4/3), fine to coarse sand with fine to
				coarse gravel, gravel angular to subrounded with diameter up to 1", trace silt,
				poorly sorted, loose, saturated.
				0.5-1.0' Silt/Clay: As above.
				1.0-1.5' Sand: Brown (5 YR 4/3), fine to coarse sand, predominately medium, trace
				subangular gravel up to 1" in diameter, matrix moderately sorted, loose, saturated.
				1.5-3.0' Silt/Clay/Sand: As above, clay reddish brown (5 YR 4/3), silt dark reddish
				brown (5 YR 4/2), more clay (3" plastic layer) than above, silt fissile, swirled and
				banded.
				3.0-5.0' Sand: Fine and coarse sand, some fine to coarse gravel which is
				subangular to rounded, poorly sorted, loose, saturated, gravel up to 1.5" in
				diameter.
90	95	5	3-17/0	0-3.0' Sand/Gravel: Brown (7.5 YR 4/3), fine to coarse sand, fine to coarse gravel,
				gravel is angular to subrounded, poorly sorted, trace silt, saturated, loose.
				3.0-5.0': Sand/Gravel: As above brown (7.5 YR 4/2), very silty, slight increase in
				amount of gravel.
95	100	5	5-18/	0-5.0' Sand: Brown (7.5 YR 4/4), fine to coarse sand, well sorted, predominately
			0.7-1.5	fine sand, loose, saturated, uniform, trace subangular to subrounded gravel, slight
				odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5	3.3-42.7/	0-4.8' Silt: Dark brown (7.5 Yr 3/3) little to some clay, silt is mostly smooth, abundant
			1.39-10.1	organics, rootlets, twigs, color grades into somewhat darker brown very dark brown
				(7.5 YR 2.5/2) below approximately 2.5, wet to saturated, trace to little very fine
				sand, sandier layer approximately 2" thick at 3.0 and 0.5" thick at 4.0, no odor.
				4.8-5.0' Sand: Dark yellowish brown (10 YR 3/6), predominately very fine to fine
				grain, some silt, loose to somewhat cohesive some blackish staining, a few grains are
				shiny, no odor, wet to saturated.
5	10	5	4.2-7.5/	0-1.0' Slough.
			4.17-9.35	1.0-1.7' Sand: As above.
				1.7-3.0' Sand and Gravel: Very dark brown (7.5 YR 2.5/3) much silt, silt is grainy
				with some shiny grains (pyrite?), sand very fine to very coarse, poorly sorted mixture,
				gravel mostly subround to approximately 4", trace clay, loose, no odor.
				3.0-4.0' Sand and Gravel: As above, but color changes to dark yellowish brown
				(10 YR 3/6), and sand is somewhat coarser overall, also less silt, no odor.
				4.0-5.0' Sand: Brown (7.5 YR 4/4), fine to coarse, predominately medium, some to
				much gravel subangular to subround, up to approximately 3", moderately sorted,
				loose, wet, no odor.
10	15	1	6.47/31.1	0-1.0' Sand: As above, but slightly finer grain overall, one 4.5" oblong rock at end
				of sample, no odor.
15	20	5	-5.1-14.3/	0-5.0' Sand: Brown very fine to fine grain, silty areas (nodules) silt is grainy, trace
			3.71-20.45	very coarse sand and fine gravel, well sorted sand, loose, wet, no odor.
20	25	5	7.3-13.41/	0-5.0' Sandy Silt: Brown (7.5 YR 4/4), little gravel subangular to subround to 2",
			0.42-4.69	sand predominately trace to little clay in nodules yellowish red (5 YR 5/6), some-
				what cohesive, sandy seam at 3.0 medium to very coarse sand, also silty, wet, no
				odor, clay is plastic when worked.

Prepared by Paul Lenaker/Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				very coarse, gravel subangular to subround to 4", silt is grainy, poorly sorted
				mixture, till, fairly loose, and crumbly, noticeable fabric signature with gravel
				alignment, wet, odor.
165	170	5	9.12-10.08/	0-2.5' Sand/Gravel/Silt: As above slightly sandier 2.0-2.5' and becomes sandier
			2700-48900	2.0-2.5 and becomes sandier as silt grades into unit below.
				2.5-5.0 Sand and Gravel: Dark brown (7.5 YR 3/3), some silt, coarsens downward,
				trace clay, sand predominately fine to coarse, but poorly sorted mixture, mostly
				coarse to very coarse 4.5-5.0', but still silty, gravel subangular to subrounded to
				3", loose, wet to saturated.
170	175	5	10.52-11.13/	0-5.0' Sand and Gravel: As above, very silty, sand very fine to very coarse, but
			7095-51200	predominately coarse to very coarse, poorly sorted, gravel subangular to
				subround to 5", some weathered/rounded pieces of bedrock, (as gravel), fines are
				washed out, slightly finer overall 3.0-4.0, loose, wet, odor.
175	180	5	-20 - 1.44/	0-5.0' Sand and Gravel: Very silty, dark brown (7.5 YR 3/2) little clay, sand very fine
			935-9878	to very coarse, gravel subangular to subround to 4", very poorly sorted mixture,
				loose, wet, strong odor.
180	185	5	168-6.04/	0-1.5' Sand/Silt/Gravel: Brown (7.5 YR 5/3) trace clay, sand predominately very
			8335-98900	fine, some fine to medium, silt is grainy to smooth, gravel is angular to subangular
				up to 4", mostly weathered pieces of bluish to gray phyllite, hard, weathered
				parts are crumbly, mixture is loose, poorly sorted, grades into unit below.
				1.5-2.5' Silt and Sand: Brown (10 YR 4/3) some to much gravel mostly subround
				to 3" grading in from above, gravel fines out downward, no gravel 2.3-2.5, silt
				is grainy, approaching very fine sand, loose to slightly cohesive, moist to wet,
				odor.
				2.5-5.0' Silt/Sand/Gravel/Clay: Dark grayish brown (10 YR 4/2), sand very fine to
				very coarse, silt moistly grainy, gravel subangular to subround to 3", somewhat
				coarser overall 4.5-5.0', poorly sorted mixture, clay mixed in but also some
				reddish nodules slightly plastic, loose, wet, odor.
185	191	5	4.03-43.95/	0-2.0' Silt/Sand/Gravel/Clay: Dark grayish brown, as above.
			3815-42500	2.0-5.0' Silt/Sand/Gravel: Dark gray (7.5 YR 4/1) crushed hardpan till powdery,
				crumbly, poorly sorted mixture, silt grainy, sand very fine to very coarse, gravel
				angular to subround to 4", much is bedrock (?) pieces, phyllite greenish gray,
				some pieces of crushed hardpan can be broken by hand, weathered (?), loose,
				dry to damp, odor.
191	192	1	242/4000	0-1.0' Bedrock: Dark greenish gray (2 Gley 4/1) phillite, crushed into angular
				pieces and pulverized into powder, moist to dry, some odor.
				EOB @ 192.

Prepared by Paul Lenaker

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				2.0-2.5' Sand: Yellowish red (5 YR 4/6), very fine to medium, predominately very
				fine to fine, some medium, trace coarse, trace gravel up to 3/4" subround to
				subangular, loose, trace silt, no odor, wet, grading into unit below.
				2.5-5.0' Sand: Brown (7.5 YR 4/4), medium to coarse, poorly sorted, predominately
				medium, some gravel up to 1" subround to subangular, loose, wet no odor
				grades into unit below.
20	25	5	.31-1.42/	0-2.0' Sand: As above, grading into predominately fine grain, some medium to
			8-1800	coarse, trace silt, poorly sorted, wet, sharp contact with unit below.
				2.0-5.0' Sand: Brown (7.5 YR 5/4), fine to medium grain, trace coarse, trace very
				fine sand, somewhat well sorted, loose, wet, no odor.
25	30	5	.72-1.61/	0-2.0' Sand: As above (2-5).
			600-2900	2.0-4.0' Sand. As above, but some to much coarse sand, trace gravel to 1/2"
				subround to subangular sharp contact with unit below.
				4.0-5.0' Silt: Reddish brown (5 YR 5/4), grainy, very well sorted, possibly on
				threshold between silt and very fine sand, somewhat loose, wet, no odor.
30	35	2	0.83-1.26/	0-2.0' Silt: As above.
			800-1400	
35	40	5	-0.40-.88/	0-3.0' Silt: As above, approaching very fine sand size.
			620-850	3.0-5.0' Silt: Color as above, smooth to somewhat grainy, clay and silt interbedded
				up to 1/4" thick, clay yellowish red (5 YR 4/6), fissle/platy in appearance and
				crumbly and hard at first, cohesive and plastic when worked, silt brown (7.5 YR 4/2),
				somewhat clayey, somewhat cohesive and plastic, wet, slight odor, silt is
				borderline very fine sand in places.
40	45	5	-0.34--0.12/	0-5.0' Sand to Silt: Reddish brown (5 YR 4/4), very fine to grainy silt, some silt,
			55-2400	somewhat loose to loose to somewhat crumbly, noncohesive/nonplastic, very well
				sorted, wet, slight odor.
45	50	5	-0.38-1.21/	0-5.0' Sand to Silt: As above, odor stronger and trace black staining.
			55-4800	
50	55	5	0.58-2.16/	0-1.0' Sand to Silt: As above grading over 0.5' into unit below.
			700-3500	1.0-5.0' Silt: Reddish brown (5 YR 4/3), smooth to grainy, somewhat cohesive/slighlty
				plastic in places, crumbly in places, interbedded with sand to silt, as above, up to
				1" thick, trace clay interbeds/laminae up to mm's thick reddish brown (5 YR 5/4),
				overall wet with odor, becoming fine at 4.5-5.0 and very crumbly.
55	60	5	-0.30- -0.02/	0-5.0' Silt: As above, saturated.
			1100-8300

				clay somewhat fissile in appearance, very plastic, very cohesive; sand-loose, well
				sorted, interbeds up to 2.5" thick, moist.
115	120	5	-0.44-0.28	0-1.5' Silty and Clayey Sand: As above.
			211-5130	1.5-5.0' Sand: Brown (7.5 YR 4/3), fine to very fine grain, trace medium to coarse,
				well sorted, trace silt, loose, wet, odor.
120	125	5	0.27-0.98/	0-1.0' Sand: As above.
			8000-19200	1.0-2.0' Sand: As above, some medium to coarse sand.
				2.0-5.0' Sand: Color as above, fine to very fine grain predominately fine, some
				medium to coarse sand and gravel up to 3/4", flat and platy, much dark shale
				flakes subangular to angular, some silt nodules dark brown (7.5 YR 3/3) with
				medium to coarse sand within crumbly up to 3", silt smooth to grainy, wet, odor.
125	135	0		No recovery.
135	140	5	-1.77 --0.69/	0-3.5' Sand: Brown (7.5 YR 4/3), very fine to fine grain, trace to some coarse, trace
			840-7013	medium grain, trace silt, in places very silty, trace fine gravel up to 1/2"
				subround to subangular, somewhat loose, odor, wet.
				3.5-5.0' Sandy Silt: Color as above, sand very fine to coarse, silt is smooth to
				grainy with vesicles, trace clay, silt is crumbly to slight cohesive dependent on clay
				content, sand medium to coarse grain seam <2" thick at 4.0', wet, odor sharp
				contact with unit below.
140	145	5	-1.50-0.95/	0-3.0' Sand and Gravel: Dark brown (7.5 YR 3/2), sand very fine to coarse, gravel
			11500-24000	up to 1.5" subround to subangular, poorly sorted, some silt, somewhat loose,
				odor, wet, from 2-2.5 sand seam of predominantly medium grain and some very
				fine to coarse and some silt, somewhat sorted, loose, wet, odor, from 2.8-3.0 sand
				and gravel includes much clay or clay lenses reddish brown (5 YR 5/4) cohesive and
				plastic.
				3.0-4.7' Sand: Brown (7.5 YR 5/3), predominately very fine to fine grain, some
				silt, some gravel up to 1/2" subround to subangular, trace medium to coarse sand,
				somewhat loose, wet, no odor, in places more gravel up to 3.5-4.0'.
				4.7-5.0' As above.
145	150	5	-0.7- -0.45/	0-1.5' Silt: Grayish brown (10 YR 5/2), grainy to somewhat smooth, crumbly, odor,
			22400-49600	wet.
				1.5-2.5' Gravely Sand: Very dark gray (7.5 YR 3/1), sand predominately fine to
				medium but some to much coarse, some to much gravel up to 1 1/2" subround
				to subangular.
				2.5-5.0' Sand: Brown (7.5 YR 4/2), fine to medium grain, trace very fine and
				coarse, trace silt, loose, wet, strong odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5.0	-2.2- -4.1/	0-3.0' Sandy Silt: Yellowish red (5 YR 5/6), trace to little gravel subangular to
			2.03-4.62	subrounded to 0.5" (fine gravel), little to some clay mixed in, sand is very fine, trace
				fine to medium, silt is grainy, loose to slightly cohesive, soft, saturated, no odor.
				3.0-5.0' Silt: Brown (7.5 YR 4/4), trace very fine sand, silt is grainy to smooth in
				places, some yellowish red clay nodules, clay is plastic when worked, slightly cohesive,
				saturated, no odor.
5	10	5	-5.5 - -4.6/	0-3.0' Silt: Brown (7.5 YR 4/4), as above, trace to some clay mixed in matrix, slightly
			2.97-4.34	plastic overall, some clay nodules as above, yellowish red, plastic when worked,
				but fissle in appearance, saturated, no odor.
				3.0-5.0' Silt: As above, but more clay content, more yellowish red (5 YR 4/6)
				nodules, color changes to brown (7.5 YR 4/3), matrix, clay may have been layered,
				wet to saturated, somewhat cohesive, no odor.
10	15	5	-5.8- -4.96/	0-4.0' Silt: With little to some clay as above, brown (7.5 YR 4/3), silt is grainy to
			3.61-5.0	smooth, less clay than above, homogeneous overall, loose to slightly cohesive, wet
				to saturated, no odor.
				4.0-5.0' Silt and Clay: Silt is brown (7.5 YR 4/3), as above clay is yellowish red
				(5 YR 4/6) and is layered with layers approximately 0.25 to 1" thick, clay appears
				fissile on broken surfaces, yet plastic when worked HR = 1.2, silt appears as above,
				slightly cohesive overall, wet to saturated, no odor.
15	20	5	-6.15- -5.89/	0-4.5' Silt/Clay: Silt is brown (7.5 YR 4/3), clay is yellowish red (5 YR 4/6),
			49.1-2013	interbedded silt/clay layers, silt layers 0.5-2" thick, clay layers 0.25-1.5" thick, silt is
				grainy with trace sand very fine to very coarse, trace gravel to 2" subround, little
				blackish staining in silt, clay fissile appearance on broken surfaces yet plastic when
				worked, some of the clay is somewhat silty in a few places, somewhat cohesive,
				wet, no odor.

Sample/Core Log (continued)

Boring/Well GMEWC-5 Page 2 of 6

Prepared by Paul Lenaker/Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				4.5-5.0' Sand/Silt/Clay: Brown (7.5 YR 4/4), sand very fine to medium, silt is
				grainy to smooth, poorly sorted mixture, somewhat cohesive, few clay nodules
				as above, slight odor.
20	25	5	-6.07- -4.17/	0-2.0' Silt/Gravel/Sand: Brown (7.5 YR 4/4), trace to little clay, very much silt, gravel
			1340-4200	subangular to subround to 4", sand very fine to very coarse, very poorly sorted
				mixture, grainy silt, loose, wet, slight odor.
				2.0-5.0' Sand/Silt/Gravel: Brown (7.5 YR 5/3) silty, sand very fine to very coarse,
				predominately coarse to very coarse, gravel subangular to subround to 3",
				somewhat finer/silt is 3.5-4.5, very poorly sorted mixture, loose, slight odor.
25	30	5	-5.25 - -4.71/	0-1.5' Sand/Silt/Gravel: As above, slightly less silty, wet, slight odor.
			1299-10900	1.5-5.0' Sand: Brown (7.5 YR 5/3), trace silt, trace fine gravel, sand fine to medium,
				trace coarse, well sorted sand, loose, wet to saturated, odor.
30	35	0		No recovery.
35	40	5	-6.39- -3.81/	0-0.5 Sand: Brown (7.5 YR 5/3) medium grain some fine to coarse, trace gravel to
			597-3750	3" round to subangular, loose, trace silt, wet, odor.
				0.5-5.0' Silt: Brown (7.5 YR 5/4) grainy almost very fine sand to grainy silty, some-
				what loose, in places finer/coarser (possible interbedded/laminated) trace coarse
				sand and gravel to 1" subround to subangular, wet, odor.
40	45	5	-4.02- -2.29/	0-5.0' Silt: As above, approaches very fine sand in places, strong odor.
			2540-14000	
45	50	5	-4.58- -4.04/	0-1.5' Silt: As above.
			699-5030	1.5-4.5' Silt with Clay: Brown (7.5 YR 4/3) matrix (silt) with large clay nodules
				2.0-2.5 especially yellowish red (5 YR 4/6) platy/fissile on broken surfaces, plastic,
				also reddish gray (5 YR 5/2), silty clay areas where silt grades fine into clay, silt
				mostly grainy, approaches very fine sand, slight to somewhat cohesive overall,
				wet to saturated, strong odor.
				4.5-5.0' Silt: Brown (7.5 YR 4/3) as above, very grainy, approaching very fine sand,
				homogenous, loose, wet, odor.
50	55	5	-4.45- -2.83/	0-5.0' Silt: As above, approaching very fine sand, very slight grainy size changes
			5015-11200	throughout, but overall homogenous, wet, odor.
55	60	5	-5.87- -4.84/	0-5.0' Silt: As above but reddish brown (5 YR 4/4).
			1590-14200	
60	65	5	-5.11- -4.71/	0-5.0' Silt: As above, but grading into slightly silter (or finer silt), less grainy below
			1810-4530	2.0, clayey band 2.5-3.0, band is cohesive, wet, saturated, odor.
65	70	5	-3.72- -2.66/	0-5.0' Silt: As above, redescribed: Reddish brown (5 YR 4/4),very grainy, approaches
			110-11000	very fine sand in places, trace clay, sandy 3.0-4.0 with very fine to fine sand, well
				sorted, but still mostly grainy silt, 1.5-2.5 much clay mixed with silt, color is same,

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				somewhat cohesive, loose to slight cohesive overall, wet, strong odor.
70	75	5	-2.52 - -1.94/	0-5.0' Silt: As above, approaching very fine sand, homogenous throughout,
			226-12000	moist to wet, strong odor.
75	80	5	-1.56 -1.0/	0-5.0 Silt: As above, reddish brown (5 YR 5/3), trace to some clay in places, silt is
			460-6185	grainy approaching very fine sand in plug to smooth, many vesicles, homogenous
				overall, loose to slight cohesive, wet to saturated, strong odor.
80	85	5	-0.96 - -0.73/	0-5.0' Silt: As above.
			90- 3300	
85	90	5	-1.22 - 0.87/	0-5.0' Silt: As above, very many vesicles, very strong odor.
			2864-18600	
90	95	5	0.64-1.25/	0-7.0' Silt: As above.
			12400-39900	2.0-5.0' Silt: As above, but grainer, slightly coarser, some very fine sand, wet,
				strong odor.
95	100	5	3.01-3.98/	0-5.0' Silt: As above reddish brown (5 YR 5/3), trace clay in matrix, a few pockets
			4020-42200	1" thick of poorly sorted very fine to coarse sand at 0-1 and 1.5-2.0, silt is
				strong to smooth, loose to slightly cohesive, wet to saturated many vesicles, trace
				fine grade, strong odor.
100	105	5	2.73 - 3.06/	0-5.0' Silt: As above.
			3500-832000	
105	110	5	2.48 - 3.37/	0-5.0' Silt: As above, but grading into sand in toward 5.0, some to much very fine
			5000-75300	sand mixed in 3.0-5.0.
110	115	5	1.98 - 3.06/	0-2.5' Silt and Sand: Sand very fine as above, grading into sandy at 2.5 mostly
			14200-33800	very fine sand with some silt.
				2.5-5.0' Sand and Gravel: Brown (7.5 YR 4/3), very silty, sand very fine to very
				coarse, gravel subangular to subround to 2", very poorly sorted mixture,
				predominately fine to coarse sand, loose, saturated, odor.
115	120	5	-1.68 - -0.90/	0-3.0' Sand/Gravel/Silt: Brown (7.5 YR 4/3) as above, very silty, sand very fine to
			680-3120	very coarse, gravel subangular to subround to 4", very poorly sorted mixture,
				loose, saturated, grades downward into siliter/sandier unit below, odor.
				3.0-5.0' Sand and Silt: Brown (7.5 YR 4/4) trace gravel subangular to subround up
				to 0.5", trace clay, sand predominately very fine, some fine, loose to somewhat
				cohesive, saturated, odor.
120	125	5	-0.6 - -1.20/	0-1.5' Sand and Silt: As above, but grades downward into sandier unit below.
			6800-32700	1.5-5.0' Sand: Brown (7.5 YR 5/3) very silty in places, mostly little to some silt
				throughout, sand very fine with little to some fine in places, homogenous overall,
				loose, well sorted sand, wet, odor.

Sample/Core Log (continued)

Boring/Well GMEWC-5 Page 4 of 6

Prepared by Paul Lenaker/Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
125	130	5	0.70-224/	0-5.0' Sand: As above, silty, especially 0-3.0.
			6442-44300	
130	135	5	1.65-2.01/	0-2.5' Sand: As above very fine, silty.
			6787-36380	2.5-5.0' Silt: Brown (7.5 YR 4/3), trace gravel subangular to subround to 0.7",
				clay layer approximately 0.8" thick at 0.3', clay is reddish brown (5 YR 5/4), platy
				appearance, but plastic, when worked, sandy layer at 4.0 with very fine to medium,
				predominately very fine, moderately sorted sand, sand layer is approximately 0.5"
				thick, silt matrix is crumbly clay, smooth moist to wet, odor.
135	140	5	13.25-30.07/	0-1.0' Gravel: Brown (7.5 YR 4/4), some sand very fine to very coarse, very silty,
			4655-6800	trace to little clay, grade subangular to subround to 3", poorly sorted mixture,
				saturated from drilling fluid, loose, odor.
				1.0-2.0' Silt and Gravel: Brown (7.5 YR 4/4), trace very fine sand, trace clay, silt is
				smooth matrix, very gravelly, crumbly to slightly cohesive, wet, odor.
				2.0-5.0' Silt: Brown (7.5 YR 4/4), grading from unit above, less gravel, little fine
				gravel 2.0-3.0 but grades out below, much sand very fine mixed in, trace fine
				gravel and fine to very coarse sand below 3.0, some reddish brown (5 YR 4/3) clay
				nodules, clay is plastic, fissile appearance on broken surfaces, HR >4.0, grainy to
				smooth silt, crumbly to slightly cohesive odor.
140	145	5	2.85-23.95/	0-4.5' Silt: Brown (7.5 YR 4/3) as above but less sandy, trace clay in matrix,
			1400-30100	increasing clay content in nodules, also approximately 4" thick clay layer at 2.0,
				clay properties as above, large clay nodules 4.5" diameter, somewhat cohesive
				matrix, odor.
				4.5-5.0' Sand: Brown (7.5 YR 4/3), little silt intermixed (could be from drilling), trace
				clay, sand very fine to medium, predominately very fine, very well sorted, loose,
				wet, odor.
145	150	5	18-38/	0-5.0' Sand: Brown (7.5 YR 4/3), some silty areas from drilling, very fine to very
			14400-30110	coarse sand, but predominately fine to medium, moderately to well sorted, loose,
				wet to saturated, odor.
150	155	5	22-23/	0-3.5' Sand: As above, but somewhat finer, predominately fine.
			9117-12600	3.5-5.0' Silt: Brown (7.5 YR 4/4), very grainy, approaches very fine sand, crumbly,
				homogenous, moist, odor.
155	160	5	-22-4.0/	0-3.5' Sand: Brown (7.5 YR 5/3), sand is predominately fine, trace medium, some
			8260-30600	very fine, well sorted, coarse 2.5-3.5 predominately fine to medium, loose, wet to
				saturated, odor.
				3.5-5.0' Silty Sand and Gravel: Brown (7.5 YR 4/3) graded into from unit above,
				sand predominately very coarse, little fine to coarse, trace clay, very silty, gravel is
				fine, but some up to 2", a few clay nodules 4.5-5.0 reddish brown (5 YR 4/4),

Sample/Core Log (continued)

Boring/Well GMEWC-5 Page 5 of 6

Prepared by Paul Lenaker/Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				loose, poorly sorted, mixture, saturated, odor.
160	165	5	-17 -11.2/	0-5.0' Silty Sandy and Gravel: As above, but progressively siltier, trace possible
			22200-161000	increasing clay content, gravel coarsens slightly, poorly sorted mixture, saturated,
				odor.
165	170	5	7-13/	0-5.0' Silty Sand and Gravel: As above, minor variations in constituents, but overall
			15800-77000	the same, predominately coarse to very coarse sand and gravel to 3", with much
				silt in matrix, wet to saturated, odor, loose to slightly cohesive.
170	175	5	7-23/	0-1.0' Silt/Sand/Gravel: As above, but more clay/silt content, clayey silt matrix
			17900-57800	dominated, somewhat cohesive, wet to saturated, odor.
				1.0-2.5' Silt/Sand/Gravel: Dark reddish brown (5 YR 3/2), some rust colored staining,
				very loose, dry, crumbly, gravel angular to subround to 3" grainy silt, poorly sorted
				mixture, odor.
				2.5-4.0' Silty Gravel: Reddish brown (5 YR 5/3), some sand, mostly coarse to very
				coarse, gravel angular to subround to 3", poorly sorted mixture, trace clay, loose,
				saturated, odor, grades over 0.2' into below section.
				4.0-5.0' Silt: Brown (7.5 YR 4/4), grainy to smooth, trace very fine to very coarse
				sand mixed in, crumbly homogenous, damp, odor.
175	180	5	2.17-4.0/	0-5.0' Sand: Brown (7.5 YR 4/3), some silt in places, predominately fine, little to
			870-71000	some medium, trace coarse, moderately sorted, some coarsening downward to
				predominately medium grain at 5.0, loose, wet to saturated, odor.
180	185	5	2.61-5.5/	0-5.0' Sand: As above, but somewhat coarser, predominately medium to coarse,
			14600-40900	some gravel to 1" subround to subangular 0-1.0, trace grave subangular to
				subround to 0.5".
				1.0-5.0' Silt: In places, loose, moderately sorted, also color changes below 1.0 to
				very dark gray (7.5 YR 3/1), wet to saturated, odor, siltier 4.0-5.0.
185	190	5	3.9-11.5/	0-1.0' Sand: As above, but very silty, grading into unit below.
			4600-22800	1.0-2.0' Silt: Brown (7.5 YR 5/2), trace sand fine to coarse, silt is very grainy,
				homogenous unit, crumbly, wet, odor.
				2.0-3.5' Sand and Silt: Brown (7.5 YR 4/4) little gravel subangular to subround to
				1", very silty, some silt in nodules, sand very fine to very coarse, poorly sorted mixture,
				loose, wet, odor.
				3.5-5.0' Silt/Gravel/Sand (till?): Dark gray (5 YR 4/1), little clay in matrix, hard, firm,
				sand very fine to very coarse, matrix predominately silt, gravel subangular to
				subround to 5", brittle, crumbly when broken, poorly sorted mixture, much grading
				subround bedrock pieces, damp, slight odor to moderate odor.

Prepared by Toni Schoen/Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
20	25	5	1.44-1.77/	0-2.0' Silt/Sand/Gravel: As above, but silt is grading out and gravel up to 4",
			1082-2750	strong odor, increasing sand content decreases.
				2.0-5.0' Sand: Brown (7.5 YR 4/4), fine to very coarse, predominately medium,
				trace subangular to subround gravel up to 2", moderately sorted, loose, saturated,
				strong odor, very sharp contact with unit below.
25	30	5	3.5-4.32/	0-1.5' Silt: Brown (7.5 YR 5/4), very grainy (near very fine sand) uniform, saturated,
			19300-24400	loose, strong odor.
				1.5-4.5' Sand: Brown (7.5 YR 5/3), trace silt (grainy), very fine to fine grain,
				predominately fine, little medium to coarse 2.0-3.0', poorly sorted, loose, saturated,
				odor.
				4.5-5.0' Sand: As above in 23.0-25.0', predominately medium grain sand seam,
				sharp contact with unit below.
30	35	5	5.46-6.35/	0-5.0' Silt: Brown (7.5 YR 4/4), as above in 23.5-25.0, very grainy, more black
			3500-9500	staining, vesicles, loose when worked, saturated, strong odor.
35	40	5	3.21-6.37/	0-5.0' Silt: Brown, as above, very grainy silt, little black staining, many vesicles,
			130-2010	saturated, somewhat loose, uniform, strong odor.
40	45	5	4.21-6.1.8/	0-5.0' Silt: As above, but contains a few areas with smooth silt.
			240-5510	
45	50	5	5.25-6.74/	0-5.0' Silt: As above, very grainy, black staining, vesicles, saturated, odor.
			400-55000	
50	55	5	7.63-4.0/	0-5.0' Silt: A above, but 2.0-3.0' interval contains predominately smooth silt, and
			5000-24300	interbedded silts of varying grain size, color is predominately brown (7.5 YR 5/3),
				somewhat cohesive 2.0-3.0, otherwise as above, strong odor.
55	75	4	5.90-8.74/	Note: Had 20 feet of recovery, but sample fell out to coarse barrel onto deck,
			4800-10300	appeared to be all the same material, but only approximately 4 feet of sample
				recovered for description. 74-75 feet interval is real.
				0-3.0' Mixture of 55-74', silt, brown (7.5 YR 4/4) totally disturbed, predominately
				smooth, was partly interbedded silt, trace black staining, bubbles, vesicles, somewhat
				loose, saturated, strong odor.
				3.0-4.0' (74.0-75.0) silt, reddish brown (5 YR 4/6), very grainy, uniform, trace
				black strong, loose, saturated, strong odor, as above in approximately 30 - 55'.
75	80	5	6.59-9.77/	0-5.0' Silt: Brown (7.5 YR 4/4), grainy to smooth, uniform, grainy to smooth,
			2300-3500	trace black staining, vesicles, somewhat cohesive to loose when worked,
				saturated, odor.
80	85	5	3.89-6.23/	0-5.0' Silt: As above.
			1300-2000

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
0	5	5	3.23-11.80/	0-4.5' Topsoil: Silt, dark yellowish brown (10 YR 3/6), trace clay, trace very fine
			7.55-25.93	sand, much organics/rootlets, silt predominately smooth, some grainy, soft, loose,
				crumbly, little fine (<0.5") gravel subround 4.0-4.5', moist, organic odor.
				4.5-5.0' Sand and Silt: Dark yellowish brown (10 YR 4/6), little to some gravel
				angular to subround up to 2", sand predominately very fine to fine, little medium
				to very coarse, sand moderately sorted, poorly sorted mixture overall, loose, moist,
				no odor.
5	10	5	1.12-1.50/	0-5.0' Sand and Gravel: Dark yellowish brown (10 YR 4/6), silty in places, sand
			3.27-13.84	very fine to very coarse, but predominately very fine to fine, gravel subangular to
				subround to 2", sand, poorly sorted, loose, multi colored gravel, moist, no odor.
10	15	5	.36-2.82/	0-1.0' Sand and Gravel: Dark yellowish brown (10 YR 4/6) very silty, gravel,
			52-172	subangular to subround, up to 2", mostly subround, sand very fine to very coarse
				predominately very fine, poorly sorted sand, slight cohesive, wet to saturated, no
				odor.
				1.0-2.0' Silty Sand and Gravel: Dark yellowish brown (10 YR 4/1), predominately
				fine gravel/ very coarse sand, sand very fine to very coarse, subround gravel up to
				2.5", trace clay, very poorly sorted matrix, saturated, no odor.
				2.0-3.0' Silt with Silt/Clay/Sand Interbedds: Silt beds are dark yellowish brown
				(10 YR 4/4), silt/clay/sand beds are yellowish red (5 YR 4/6), alternating layers
				approximately 2" thick (both), silt layers are smooth to grainy with trace coarse
				sand, silt layers are uniform, silt/clay/sand layers contain some clay, some grainy
				silt, some well sorted very fine sand and are somewhat cohesive, wet and pasty
				texture, overall cohesive unit with no odor, grades into unit below with silt layers
				staying the same, but silt/clay/sand layers changing to clay, layers at approximately
				3.0.
				3.0-5.0' Silt/Clay Interbedds: Silt layers are same description as above, but about

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				3-4" thick at 3.0 grading into 1-2" thick at 5.0, clay layers mm's thick (varved)
				to 1" thick, variable thickness 3.0-5.0, but more frequent 3.8-5.0', clay layers
				have fissile/platy appearance on broken surface, but plastic when worked, clay is
				yellowish red (5 YR 4/6), cohesive and firm overall, trace very fine sand seam at
				3.5', stiff silt and clay, moist to wet, no odor.
15	20	5	-.13-.92/	0-2.0' Slough: From above.
			1.5-1308	2.0-2.5' Silt/Clay: Interbedds as above grading into unit below.
				2.5-5.0' Clayey Silt: Reddish brown (5 YR 4/4), trace sand very fine to very coarse,
				predominately coarse to very coarse, trace fine, subrounded gravel, poorly sorted,
				sticky and cohesive, easily molded, crumbly appearance, disturbed silt and clay
				layers?, some clay nodules yellowish red, plastic, wet, slight odor.
20	25	5.0	.94-1.94/	0-5.0' Sand: Reddish brown (5 YR 5/4) trace silt, sand very fine to fine,
			2500-13000	predominately fine, slight trace medium to coarse, well sorted, loose, uniform, wet
				to saturated, strong odor.
25	30	5	1.74-2.76/	0-5.0' Sand: As above.
			6700-15400	
30	35	5	2.08-3.65/	0-1.0' Sand: As above.
			9050-10600	1.0-2.0' Sand: Reddish brown (5 YR 4/4) trace gravel subround to 1", trace silt,
				sand is very fine to very coarse, but predominantly medium, moderately well sorted,
				loose, wet to saturated, strong odor.
				2.0-5.0' Sand: Reddish brown (5 YR 4/4) very fine to fine sand, trace medium to
				very coarse, moderately to well sorted, loose, wet to saturated, strong odor.
35	40	5	1.64-2.08/	0-5.0' Sand: As above, with a gravelly layer 2.5-3.2 with much gravel up to 3"
			24300-25700	angular to subround, mostly angular white quartz pieces, storm deposit? Also
				one 4" quartz piece at 3.5, otherwise same sand as above.
40	45	5	1.06-1.80/	0-5.0' Sand: As above, well sorted, and very fine to fine, predominately fine, nice
			20300-15000	clean uniform sand.
45	50	5	1.31-1.75/	0-5.0' Sand: As above, very uniform, continues, very fine to fine sand,
			8000-20000	predominately fine, well sorted.
50	55	5	1.86-2.41/	0-5.0' Sand: As above, with little silt 3.5-5.0, this was a very inform, continuous
			8000-151600	sand from 32 to 55'.
55	60	5	.07-1.12/	0-5.0' Sand: As above, but very silty in places, also trace medium to coarse in places,
			920-13000	saturated from drilling fluid, strong odor.
60	65	6	.08-1.95/	0-5.0' Silt: Reddish brown (5 YR 4/4) trace to little clay, silt predominately smooth
			1000-3500	at 0.0 but grades into grainy at 5.0, trace to little clay, clay grades out toward 5.0,
				very sticky and more clayey 0.0-2.0, silt coarser down section and is borderline

Boring/Well GMEWC-8 Page 3 of 5

Prepared by Andy Mumpy/Toni Schoen

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				very fine sand at 3.5, by 5.0 it is very fine sand predominately, vesicles throughout,
				odor, saturated/soupy probably from drilling fluid.
65	70	5	.07-1.44/	0-5.0' Sand and Silt: Brown (7.5 YR 4/4) silt grainy to smooth, sand very fine, well
			800-25400	sorted, soft, somewhat cohesive to loose, well sorted sand, some siltier/sandier areas,
				uniform overall, might have been layered, but not distinguishable, wet, odor.
70	75	5	.96-1.94/	0-2.5' Silt: Reddish brown (5 YR 4/4) trace clay, silt is smooth, uniform, sticky and
			7500-10000	cohesive, trace black staining 0-1.5 vesicles, somewhat loose, saturated, odor.
				2.5-5.0' Silt and Sand: Yellowish red (5 YR 4/6) well sorted, silt very grainy, sand
				very fine, borderline very fine sand/silt, intermixed uniform sample, trace black
				staining, loose and crumbly, moist to wet, odor.
75	80	5	-.52-.47/	0-5.0' Silt: Reddish brown (5 YR 4/4) some clay, silt predominately smooth,
			107-270	uniform sample, saturated/soupy from drilling fluid, sticky/cohesive but soft,
				slight odor, possible small layers, but disturbed/intermixed, not distinusible.
80	85	5	-.56- -.44/	0-5.0' Silt: As above, but grading into less clay content, also silt becomes somewhat
			69-154	grainier in places, few vesides trace black staining, odor.
85	90	5	-.52-.42/	0-1.5' Silt: Reddish brown (5 YR 4/4) little to some well sorted very fine sand
			616-11500	intermixed in matrix, silt predominately grainy, some smooth, saturated with
				drilling fluid as above, soft, uniform, somewhat cohesive, odor.
				1.5-2.0' Silty Sand: Reddish brown (5 YR 4/3) very fine well sorted sandy layer, silt
				grainy to smooth, saturated as above, odor.
				2.0-5.0' Silt: As above in 0-1.5', trace black staining, saturated, odor.
90	95	5	-.10-.88/	0-0.5' Silt: As above.
			911-27500	0.5-5.0' Silt and Sand: Interbeds: silt is reddish brown (5 YR 4/4) sand is reddish
				brown (5 YR 4/3), layering is as follows: 0.5-1.1, silt, 1.1-1.4 sand well sorted
				very fine to fine with trace silt and no odor.
				1.4-1.8' Silt: Grainy as above, 1.8-1.9 sand well sorted very fine, 1.9-3.0 silt as
				above with one 0.5"with very fine sand seam at 2.5 and one 0.7" thick clay layer
				at 2.8, clay is yellowish red, plastic, medium dense 3.0-3.5 silt as above, 3.5-3.7
				silty sand very fine 3.7-3.8 silty clay, yellowish red, 3.8-5.0 silt and sand intermixed,
				with very fine sand and grainy silt, overall silt/sand interbred 0.5-5.0, somewhat
				cohesive, wet, odor.
95	100	5	-.45- -.41/	0-5.0' Sandy Silt: Brown (7.5 YR 4/4) matrix silt is smooth to grainy, sand it very
			687-2450	fine, with 3 sand layers, reddish brown (5 YR 4/4) at approximately 1.0, 1.6, 2.0,
				each is approximately 2" thick, somewhat distorted from drilling, sand well sorted
				very fine to fine, loose, some clay varving 3.0-5.0' with clay yellowish red
				(5 YR 4/6), possibly a few clay layers approximately 0.5" thick, but distorted, clay

Sample/Core Log (continued)

Boring/Well GMEWC-8

Prepared by Andy Mumpy/Toni Schoen

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				is plastic, matix is sandy with very fine sand, saturated, no odor throughout.
100	105	5	.43-1.01/	0-5.0' Silty Sand: Brown (7.5 YR 4/4) sand well sorted very fine, trace fine, trace clay
			4200-32400	nodules yellowsih red plastic to 2:, silt grainy to smooth, silt in matrix, but also a
				few layer 0.5-4" thick 2.0-5.0', but disturbed from drilling, so not clear, slight
				cohesive, loose, soft, wet, no odor.
105	110	5	-0.8-1.45/	0-1.0' Silty Sand: As above, less silt, cleaner sand.
			49-920	1.0-3.0' Silt: Reddish brown (5 YR 5/4), predominately smooth, some grainy, trace
				very fine sand, stiff and cohesive to somewhat crumbly when broken, trace black
				staining, trace clay layers <0.5" yellowish red and plastic, but not distinguisble,
				distorted, wet, no odor.
				3.0-4.0' Silty Sand: As above in 0-1.0, but siltier, grainy silt, less sand.
				4.0-5.0' Silt: as above in 1.0-3.0.
110	115	5	-.21-1.78/	0-1.5' Silt: Reddish brown (5 YR 4/4) trace to little clay in matrix, medium stiff,
			9-260	moderately cohesion, somewhat crumbly when worked, somewhat sticky,
				saturated, no odor.
				1.5-5.0' Silt/Clay: Interbeds, silt is brown (7.5 YR 4/4) clay is yellowish red
				(5 YR 4/6), silt is matrix/majority of sample with clay layers 0.5-4" thick, clay is
				plastic, fissile appearance on broken surfaces, moderately dense, some clay has silt
				varying within, clay layers prominent 2.5-4.5', otherwise sporadic, cohesive
				overall, saturated, no odor.
115	120	5	.15-1.37/	0-5.0' Sand: Brown (7.5 YR 4/4) trace to little silt in matrix, many silt nodules of
			3400-8900	brown, grainy silt up to 2", high concentration of nodules 0-0.5 (possibly slough?),
				sand is very fine, trace to little fine, well sorted, loose, uniform, wet, slight odor.
120	125	5	-.34-1.35/	0-5.0' Sand: As above, brown (7.5 YR 4/4), very fine to fine grain, well sorted,
			2015-9000	uniform, possible slight trace silt, loose, wet, no odor.
125	130	5	-.39-1.59/	0-5.0' Sand: As above, uniform, but odor.
			501-19100	
130	135	5	.07-1.59/	0-5.0' Sand: As above, strong odor, uniform 115-135.
			610-22100	
135	140	5	.25-.05/	0-5.0' Sand: Reddish brown (5 YR 4/3) trace silt, sand very fine to coarse,
			1700-8500	predominately fine to medium, moderately sorted, methane bubbles, loose,
				uniform, wet to saturated, strong odor.
140	145	5	0-3.24/	0-5.0' Sand: As above, trace silt grades out to no silt, predominately fine to
			10000-110000	medium, uniform, strong odor.
145	150	5	1.81-3.26/	0-5.0' Sand: As above.
			15000-10000	

ARCADIS

Sample/Core Log (continued)

Boring/Well GMEWC-8 Page 5 of 5

Prepared by Andy Mumpy/Toni Schoen

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
150	155	5	1.42-1.98/	0-5.0' Sand: As above, but some coarsening 2.0-5.0; predominately fine to medium,
			14600-40700	but slightly more coarse grains, saturated, strong odor, this was a uniform sand
				135-155.
155	160	5	1.88-2.86/	0-5.0' Sand: As above, brown (7.5 YR 4/4), but trace silt, still predominately
			3800-17000	fine to medium uniform, loose, saturated, very strong odor.
160	165	5	.71-3.85/	0-5.0' Sand: As above, trace silt, strong odor.
			9000-37000	
165	170	5	1.19-2.02/	0-2.0' Sand: As above.
			1300-150000	2.0-5.0' Sand: As above, but becoming more poorly sorted with very fine to
				very coarse sand, and more silt, little to some silt, loose, saturated, strong odor.
170	175	5	.37-1.59/	0-3.5' Silty Sand: Brown (7.5 YR 4/4), 6" thick silt layer at 0.3, brown (7.5 YR 4/4),
			2000-13000	grainy, firm/cohesive matrix is sand very fine to very coarse, very poorly sorted, silty,
				trace fine gravel subangular to subround, loose, wet to saturated, strong odor.
				3.5-5.0' Silt: Brown (7.5 Yr 4/4) smooth 3.5-4.0', then grainy, little gravel
				subround to 1", very gravelly 3.5-4.0, trace very fine to very coarse sand,
				crumbly and loose overall, slightly cohesive when molded, wet, strong odor.
175	180	5	-.54-.67/	0-5.0' Silty Clay Intervals: Brown (7.5 YR 4/4) silt is smooth, soft, somewhat
			6.04-7.19	sticky, fairly uniform, silt is major constituent with clay interbeds varved to 1"
				thick sporadic, yellowish red (5 YR 4/6), clay is plastic, medium to dense, more
				prevalent 2.0-5.0, cohesive, saturated, no odor.
180	185	5	.32-2.35/	0-5.0' Silt: With clay interbeds/varying as above with trace subround gravel to 0.5",
			4.13-1279	and sand seam 3" thick at 2.0, dark brown (7.5 YR 3/3), well sorted very fine to fine,
				some black staining, no odor.
185	190	5	.29-4.84/	0-1.0' Silt/Clay: As above.
			8.24-24.57	1.0-5.0' Silt/Sand/Gravel: Brown (10 YR 4/3), trace clay, predominately silt and
				gravel, sand is very fine to very coarse intermixed in silt matrix, gravel subangular to
				subround, up to 3", possible fabric signature with long axes vertical in hole, many
				subround pieces of bedrock, silt smooth to grainy, had, dense, till (?), much coarser
				gravel 2.5-3.5', mostly 3-4", poorly sorted mixture, moist, no odor.
190	195	5	.01-7.5/	0-5.0' Silt/Sand/Gravel: As above, with many 4" subround bedrock pieces, somewhat
			8.12-50.73	sandier 2.0-5.0, no odor.

				well sorted, clean, loose, saturated, slight odor.
25	30	5	3.61-6.13/	0-2.0' Sand: As above.
			6900-11300	2.0-3.0' Sand: Brown (7.5 YR 5/4) fine to coarse, predominately fine, poorly to
				moderately sorted, loose, clean, saturated, odor.
				3.0-4.0' Sand: As above in 23.0-27.0', very fine to fine grain, predominately fine,
				saturated, odor.
				4.0-5.0' Sand: Brown (7.5 YR 5/4), fine grain, well sorted, loose, saturated, odor.
30	35	0		No recovery.
35	40	5	3.07-7.94/	0-4.5' Sand: Brown (7.5 YR 4/4), trace gravel subangular to subround up to 1", but
			364-5063	predominately fine, sand predominately fine to medium, trace coarse, moderately
				sorted, loose, saturated, odor.
				4.5-5.0' Silt: Brown (7.5 YR 5/4), very grainy, uniform, loose when worked, trace
				black staining saturated, odor.
40	45	5	5.64-20.54/	0-2.5' Silt: As above, grading into section below.
			1611-3624	2.5-4.0' Silt: Brown (10 YR 4/3) smooth, trace to little clay, soft, sticky, liquefied
				from drilling, saturated, odor, grades into section below.
				4.0-5.0' Silt: As above, grainy.
45	50	5	8.72-17.5/	0-5.0' Silt: Brown (7.5 YR 4/4), very grainy, as above, trace black stains, very
			2000-11300	uniform, loose, when worked, saturated, odor.
50	55	5	12.02-26.64/	0-5.0' Silt: As above, but some interbedded, smooth silt 4.0-5.0'.
			10000-26000	
55	60	5	0.2-0.64/	0-5.0' Silt: Brown (10 YR 4/3), interbedded, grainy and smooth silt, highly disturbed
			554-1770	from drilling, sample appears uniform, vesicles, trace black staining, sticky, possible
				clay varving/bedding, somewhat cohesive, saturated, odor.
60	65	6	3.95-5.83/	0-5.0' Silt: Brown (7.5 YR 4/4), as above, grainy, vesicles, uniform, saturated, trace
			1550-262	dark staining, somewhat cohesive, strong odor.
65	70	5	3.81-8.18/	0-5.0' Silt: As above.
			2340-6470

			1500-11200	
75	80	5	5.24-13.16/	0-5.0' Silt: Color as above, grainy to smooth, trace black staining, uniform, bubbles
			515-1687	in water, vesicles, somewhat cohesive, saturated, odor.
80	85	5	10.45-12.05/	0-5.0' Silt: As above.
			1350-3310	
85	90	5	10.74-11.64/	0-4.0' Silt: As above.
			2417-5617	4.0-5.0' Silt: As above, but very grainy.
90	95	5	8.84-13.61/	0-0.5' Sand: Brown (7.5 YR 4/4), very fine grain, close to grainy, silt in size, uniform,
			7800-10100	well sorted, loose, saturated, odor.
				0.5-3.0' Silt: As above, very grainy.
				3.0-5.0' Silt: As above, predominately grainy, but some smooth, staining,
				saturated, odor.
95	100	5	0.2-1.43/	0-5.0' Silt: As above, brown (7.5 YR 4/4), predominately smooth, some grainy,
			523-1974	uniform sample, trace clay, somewhat cohesive, sticky, vesicles, trace black staining,
				saturated, strong odor.
100	105	5	0.43-3.78/	0-5.0' Silt: As above.
			2190-3440	
105	110	5	1.24-7.37/	0-3.5' Silt: As above.
			7900-11900	3.5-5.0' Sand: Brown (7.5 YR 4/3), very fine grain, well sorted, uniform,
				saturated, odor.
110	115	5	0.41-3.46/	0-1.0' Sand: As above, grading into section below.
			1000-9800	1.0-5.0' Sand: As above, interbedded with silt layers, predominately very fine sand,
				but contours abundant silt, beds not discernable due to drilling, highly disturbed, silt
				layers appear up to 2" thick, loose, saturated, odor.
115	120	5	3.29-5.58/	0-5.0' Silty Sand: Reddish brown (5 YR 4/3), trace clay layering 0-4.0, clay is
			2330-5740	yellowish red, plastic, appears platy when broken, clay layers <0.3" thick, very silty,
				sand is predominately very fine with some fine in places, slight cohesiveness,
				saturated, odor.
120	125	5	1.82-4.51/	0-5.0' Sand and Silt: Reddish brown (5 YR 4/3), predominately smooth silt, some very
			5700-11000	fine to fine sandy areas/pockets were probably sand seams up to 2" thick, but sill
				silty, trace gravel subangular to subround mostly fine, a few up to approximately
				1", slightly cohesive, saturated, strong odor.
125	130	5	8.23-9.09/	0-5.0' Sand: Brown (7.5 YR 4/3) very fine grain, very well sorted, uniform, trace
			35000-90000	black staining, saturated, strong odor.
130	135	5	0.11-9.05/	0-5.0' Sand: As above, very fine grain, grades decreases below 2.5 into every
			10000-32000	slightly finer, approaching very grainy silt in size, saturated, strong odor.

				fine to coarse gravel
				4.0-4.2 up to 1.5" diameter angular to subround.
				4.2-5.0' Sand: Color as above, very fine to fine grain, trace medium, trace silt,
				moderately well sorted, wet, loose, strong odor.
145	150	5	4300-90000/	0-0.5' Sand: Reddish brown (5 YR 4/3) very fine to fine sand, very silty/clayey,
			-23--21	moderately well sorted, wet, somewhat sticky, strong odor.
				0.5-2.0' Sand: Brown (7.5 YR 4/3) very fine to medium grain, poorly sorted, trace
				coarse, little fine to coarse gravel up to 1.5" diameter most <1/4" angular to
				subround, loose, wet, very strong odor.
				2.0-3.5' Silt: Reddish brown (5 YR 4/3) smooth silt, somewhat clayey/somewhat
				plastic, wet, very strong odor
				3.5-4.5' Silt: Color as above, grainy silt somewhat loose, wet, very strong odor;
				at 3.7' 2" band fine to medium grain sand.
				4.5-5.0' Sand: Brown (7.5 YR 4/2) very fine to medium grain, trace coarse, poorly
				sorted, wet, loose, very strong odor.
150	155	5	36000-72000/	0-0.5' Sand: As above.
			-22--21	0.5-3.5' Silt: Red brown (5 YR 4/4) smooth silt, interbedded with varves 1/8" thick
				layers, yellow red (5 YR 4/6) somewhat plastic somewhat clayey.
				3.5-5.0' Sand: Brown (7.5 YR 4/4) very fine to fine grain, trace to little medium,
				trace silt, loose, wet, strong odor, with two clay layers 1" and 2" clay, yellow
				red (4/6) soft, plastic.
155	160	5	1750-5300/	0-4.5' Sand: Brown (7.5 YR 5/2) fine grain, little very fine, trace to some medium
			-0.34-0.65	fine quantity with depth, loose, wet, well sorted to moderately well sorted; 0-2.5'
				no silt, 2.5-4.5' little to some silt; strong odor.
				4.5-5.0' Silt: Reddish brown (5 YR 4/3) smooth silt, somewhat loose to somewhat
				clayey/plastic, 4.5-4.7' sandy with as above sand, wet, strong odor.
160	165	5	1900-6400/	0-0.2 Silt: As above.
			0.38-0.93	0.2-2.0' Silt: Brown (7.5 YR 4/3) smooth silt, somewhat clayey, somewhat plastic,
				wet, strong odor, abundant vesicles, trace clay layers, probably varved.
				2.0-5.0' Silt: Brown (7.5 YR 4/2) grainy silt, somewhat loose, no to trace very fine
				grain well sorted sand in places, wet, strong odor, trace fine angular gravel 4.7-
				4.8 up to 1/4" abundant vesicles.
165	170	5	8000-19000/	0-4.0' Silt: As above, no fine gravel, trace clay layers, very abundant vesicles.
			0.76-1.67	4.0-5.0' Silt/Clay: Silt reddish brown (5 YR 4/3) clay yellowish red (5 YR 4/6)
				interbedded varved smooth silt and clay, silt is clayey and somewhat plastic,
				clay is soft to medium firm, plastic when worked, abundant vesicles, wet, very
				strong odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/ OVM (ppm)	Sample/Core Description
				angular to subangular, wet, strong odor.
				4.0-5.0' Sand: Brown (7.5 YR 4/3) fine grain, trace silt, well sorted, loose, wet,
				strong odor.
135	140	5	1707-12600/	
			-0.68-1.12	0-2.0' Sand: Brown (7.5 YR 4/2) fine grain, trace to some very fine, slight trace
				medium well sorted, loose, trace to no silt, wet, very strong odor, black staining,
				fines slightly with depth.
				2.0-5.0' Sand: Brown (7.5 YR 4/3) very fine to fine grain, well sorted, trace to
				no silt, loose, wet, very strong odor.
140	1445	5	13600-28000/	0-2.0' Sand: Color as above, as above silt increases slightly with depth.
			1.36-1.93	2.0-5.0' Sand: Color as above, as above trace to little silt.
145	150	5	1786-13800/	0-0.3' Sand: As above.
			0.09-0.73	0.3-1.0' Sand/Silt/Gravel: Brown (7.5 YR 4/3) fine grain sand, smooth silt, and
				fine to coarse gravel, sand is fine grain with trace medium to very coarse, poorly
				sorted; silt is somewhat clayey, as the matrix, the silt makes the section some-
				what sticky; gravel is fine to coarse up to 2" diameter angular to subround,
				overall; somewhat loose, wet, strong odor.
				1.0-1.5' Silt/Sand: Brown (7.5 YR 4/3) fine grain, well sorted and smooth
				clayey silt, may have been bedded, now very distorted, overall; clayey, sticky
				and somewhat plastic, wet.
				1.5-3.5' Sand/Silt/Gravel: Brown (7.5 YR 4/3) as above, slightly less silt, more
				sand.
				3.5-5.0' Silt: Brown (7.5 YR 4/2) smooth silt, trace clay varves 1/8" layers, clay is
				dark reddish (5 YR 3/3) 1/2" layer at top contact; silt is clayey and plastic and
				probably varved throughout with clay, wet, odor, clay is soft and plastic, less
				clay in silt with depth, vesicles.
150	155	5	705-11000/	0-3.8' Silt: Brown (7.5 YR 4/2) smooth silt varved with grainy silt, crumbly when
			-0.09-2.38	worked, somewhat firm in place, trace black staining, trace clay varves, 1"
				clay layer at 2.5 soft and plastic, wet, strong odor.
				3.8-4.5' Sand: Brown (7.5 YR 5/2) very fine grain, well sorted, loose, trace
				silt, wet, strong odor.
				4.5-5.6' Clay: Red brown (5 YR 4/4) clay is soft, plastic, plately on broken
				surface, wet, odor.
				4.6-5.0' Sand: Brown (7.5 YR 4/2) very fine to fine grain, trace to little silt,
				well sorted, loose, wet, strong odor.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GMSB-1

Prepared by Bruce Evans/Ray Flynn

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				2.5-3.5': Gravel. Loose very silty gravel brown (7.5 YR 4/3), variable composition subangular to well rounded clast supported, very poorly sorted.
				3.5-5': Gravel. As above (0-2.5) but dark grey (7.5 YR 4/1).
305	310	5	200/0	0-3.5': Coarse Sandy Gravel. Loose variable composition, subangular to well rounded, poorly sorted, coarse sand matrix. Clasts up to 2-1/2" diameter. Matrix dark reddish grey (10 YR 4/1).
				3.5-5': Medium Sand. Loose, dark reddish grey (5 YR 4/2), well sorted, trace gravel.
310	315	5	750/0.0	0-2.5': Medium Sand. As above.
				2.5-5.0': Very Fine Sand. Brown (10 YR 5/3), slightly dense, some silt, well sorted.
315	320	5	1,500/0.2	0-1': Gravel. Very silty loose saturated contains large angular fragments of slate. Some clayey silt nodules, fissile, greenish/grey (5/1/5 BG - Clay 2) angular fragments indicate drilled through slate boulder. Contains trace weathered subangular slate. Matrix fine sand saturated, some silt brown (7.5 YR 5/3). (Soil sample taken at 317').
				1-5': Sand. Fine to very fine well sorted, loose, reddish brown (5 YR 5/2) trace angular to subrounded slate gravel. Nodule of bluish grey silty clay noted at 4' bgs. Clay nodule taken for possible grain size analyses.
320	325	5	1,000/0.3	0-3': Sand. Fine grained, poorly sorted, some medium and trace coarse sand, coarser fraction predominantly slate fragments (subangular) weak red (2.5 YR 4/2), trace silt. Saturated.
				3-5': Medium Sand. Some coarse sand and some to much fine gravel (predominately subrounded slate). Lesser amounts of subrounded quartz in gravel. Loose and saturated dark reddish grey (2.5 YR 4/1). Trace silt/clay slightly cohesive.
325	330	5	>10,000/1	0-0.5': Sand as above.
				.5-3': Fine Sand. Some silt (cohesive) trace to some subangular to subrounded gravel. Clasts up to 2-1/2" in diameter. Clast of slate. Dark reddish grey (2.5 YR 4/1).
				3-4.5': Sand. Fine grained cohesive. Some to much silt clay, slightly dense, satured dark grey (7.5 YR 4/1). Sample for grain size analyses.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
0	2	10/2.5	2,2,3,2	0-5.0": Loam. Dark brown (7.5 YR 3/4) sandy, silt, "A Horizon" grass, roots,
				slightly moist, medium dense.
				5.0-10": Sand. Silty, yellow red (5 YR 5/6), sand fine, some medium, trace
				coarse, trace gravel 1/8 to ½ inch, subrounded to subangular, loose to
				medium dense, moderate sorting.
2	4	10/3.0	4,4,5,3	Sand and Gravel. Yellow red (5 YR 5/6), sand, fine with medium trace coarse and
				very coarse, gravel ¼ to 1 inch, subround, loose, poorly sorted.
4	6	0/-	7,7,5,10	No recovery, quartzite blocked recovery.
6	8	7/3.5	10,7,10,10	0-2.0": Large fractured cobble.
				2.0-7.0": Sand. Light red brown (5 YR 6/4) medium to coarse, some fine, trace
				silt and very coarse, coarsens down, medium dense, slightly moist, moderate
				sorting.
8	10	14/4.0	4,7,7,4	Sand. Light red brown (5 YR 6/4) medium with fine trace very fine, trace
				coarse, moderate well sorted, medium dense, trace ¼ inch gravel,
				subrounded to subangular.
10	12	13/3.5	3,7,3,5	0-2.0": Sand. As above.
				2.0-13":Sand. Coarse and very coarse, trace fine, with gravel 1/8 to 1 inch
				subrounded, red brown (5 YR 5/4) poorly sorted, very moist.
12	14	12/3.5	5,5,5,7	Sand and Gravel. Sand coarse with very coarse and medium, some fine gravel
				¼ to 1 ¼ inch, subround to subangular, fractured, very poorly sorted,
				red brown (5 YR 5/4) medium dense, slightly moist.
14	16	0/-	5,4,4,3	No recovery.
16	18	18/3.5	7,6,8,4	0-3.0": Clay. With gravel and sand, clay ripped up, sand coarse to very coarse,
				gravel ¼ to ½ inch, subrounded.
				3.0-7.0": Clay. Red brown (2.5 YR 4/4), plastic, trace mottling, soft,

Sample/Core Depth (feet below land surface) From	To	Core Recovery (inches) OVA (ppm)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
				slump contrast between clay and sand.
				7.0-18": Sand. Light red brown (5 YR 6/4) medium some fine, well sorted,
				slightly mosit, moderate, dense.
18	20	15/3.5	5,4,6,6	0-5.0": Sand. As above.
				5.0-15": Sand. Light brown (7.5 YR 6/4) medium with fine, coarse and
				very coarse, trace 1/8 to ¼ inch gravel, moderate well sorted, medium dense,
				gravel subrounded.
20	22	17/4.0	5,6,6,4	0-4.0": Sand. As above.
				4.0-17": Sand. Light red brown (5 YR 6/4) fine with very fine, some silt,
				sorted, medium dense.
22	24	16/3.5	5,15,10,12	Sand. As above, at 11 inches a very fine (<1 mm) black lamination likely
				iron, or manganese.
24	26	17/3.25		0-13": Sand. Light red brown (5 YR 6/4), very fine to fine, some silt, dense,
				slightly moist.
				13-15.5": Silt. Yellow red (5 YR 4/6) some sand (variable) at approximately 14
				inches layered silt, and sand, very fine silty. Silt is dense, trace clay, silt.
				15.5 to 17": Sand. Yellow red (5 YR 4/6), very fine to fine, silty, slightly moist
				well sorted.
26	28	18/3.0		Sand. Light red brown (5 YR 6/4) very fine to fine, very well sorted, dense
				slightly moist at 3.5 and 4 inches, thin 1/8 inch clay seams, soft, silty.
28	30	17/3.0		Sand. Light red brown (5 YR 4/6) very fine to fine, well sorted, dense, slightly
				moist to dry. At 12 inches, approximately 1/8 inch thick sand lense, medium
				with fine trace coarse brown (7.5 YR 4/4) from 11 to 12 inch very fine
				black sand laminae.
30	32	18/2.5		Sand. Red brown (5 YR 4/4) as above at 3.5 to 4 and 8 to 8.5, silty sand, sand
				very fine. From 11 to 18 inches coarsens down, ending with medium
				sand, some fine, trace coarse and very coarse, moderate sorting, medium
				dense.
				EOB = 32 ft bgs. 14:45 will abandon hole, will not install vapor probes at
				this location.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GMSB-8

Prepared by Ray Flynn/Dan Hegrenes

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				3-5': Sand. Fine with trace well rounded gravel. Sand: reddish brown (5 YR 4/4) loose.
30	35	5	1/	0-5': Sand. Fine, as above.
35	40	5	13/	Sand. Fine, as above with trace rounded gravel.
40	45	5	1/NA	0-3.0': Sand. Brown (7.5 YR 4/4) fine, some medium, loose, dry. Trace well rounded gravel. Fine sand at base, very well sorted.
				3.0-5.0': Sand. Brown (7.5 YR 5/2) fine, as above, with some to much fine, well rounded, varilable composition, gravel. Loose, very weak HCl reaction (0.5 M HCl), damp.
45	50	5	2/NA	0-2.0': Sand. Brown (7.5 YR 5/4) medium, some fine sand. trace fine, well rounded gravel, loose.
				2.0-2.5': Silt. Brown (7.5 YR 5/3) stiff (HP = 1.5), damp.
				2.5-5.0': Sand. Medium, very well sorted as 0-2 feet. Becomes fine sand toward base. Loose.
50	55	5	3/NA	0.0-5.0': Sand. Fine to medium, as above, loose, silt lens at 0.5-1.0 feet. Damp.
55	60	5	20/NA	0.0-4.0': Sand. Brown (7.5 YR 5/3) fine to medium, very well sorted, slightly dense, damp.
				4.0-5.0': Silt. Strong Brown (7.5 YR 4/6), very stiff (HP), hard, >4.0. Strong to mild HCl reaction, matrix supported, trace fine gravel.
60	65	5	1/NA	0.0-2.0': Silt. Very stiff, as above. Lens of fine sand at 1.9.
				2.0-4.5': Silt. Dark Brown (7.5 YR 3/4) with mainly thin to thick lamellae of laminated clay. Clay: Reddish brown (2.5 YR 4/3) very stiff to hard HP = 3.8 to 4.0. Strong reaction with HCl in brown silt. Moderate HCl reaction with red clay.
65	70	5	0/NA	0.0-2.5': Silt/Clay. Succession as above.
				2.5-5.0': Silt/Sand. Dark Brown (7.5 YR 3/4) Laminated fine, well sorted sand becoming more dominant toward base. Silt: Stiff HP = 2.0. Sand: As silt in color, more dense.
70	75	5	1/0	0.0-0.5': Silt. Dark brown.
				0.5-1.0': Sand. Fine, trace silt.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GMSB-8

Prepared by Ray Flynn/Dan Hegrenes

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				1.0-1.5': Silt. As 0.0-0.5".
				1.5-2.0': Sand. Fine, as 0.5-1.0, loose.
				2.0-4.5': Silt. With each clay lamination (fine at 2.2'). Abundant, very fine lamellae. Medium stiffness (HP = 1.0) no HCl reaction.
				4.5-4.6': Sand. Reddish brown (5 YR 4/3) fine at 0.5-1.0, loose to slightly dense, very well sorted.
				4.6-5.0': Sand. Reddish brown (5 YR 4/4) medium, very well sorted loose. No reaction with HCl.
75	80	5	4/NA	0.0-5.0': Sand. Reddish brown (5 YR 4/4) medium, loose to slightly dense, very well sorted.
80	85	5	6/NA	0-4.9': Sand. Medium, as above.
				4.9-5.0': Silt. Reddish brown (5 YR 4/4) soft (HP = 0.4). Some to much fine sand.
85	90	5	4/3.5	0.0-2.0': Sand. Reddish brown (5 YR 5/3) fine, very well sorted, loose, saturated, trace silt.
				2.0-5.0': Sand. Brown (7.5 YR 5/4) medium, very well sorted, loose, some coarse sand.
90	95	4	1.0/3.5	0-4.0': Sand. Medium, as above, some coarse sand in lowest 1 foot.
95	100	3	2.0/4.1	0-4.9': Sand. Brown (7.5 YR 5/4) medium as above, becomes coarse sand with increasing depth. Trace to some fine gravel, Subangular, variable composition, loose.
				4.9-5.0': Sand. Strong brown (7.5 YR 4/6), fine and silty, soft to medium stiff (HP = 1.0). Damp. Deposit well sorted, no reaction with HCl.
100	105	5	5.0/4.1	0.0-1.5': Sand. Silty, as above.
				1.5-3.0': Sand. Brown (7.5 YR 5/4) fine, loose very well sorted, trace silt. No HCl reaction.
				3.0-4.0': Sand. Brown (7.5 YR 5/4) as above with some silt.
				4.0-5.0': Silt. Brown (7.5 YR 5/4) soft (HP = 0.5), cohesive. Trace to some fine sand, very well sorted. No HCl reaction.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
				3.5-3.75': Sand. Color as above, medium with fine, some very fine, trace coarse and
				very coarse, poorly sorted, medium density, saturated, trace gravel 1/8 to ½ inch,
				subrounded.
				3.75-5.0': Silt. Red brown (5 YR 4/3), very stiff to hard on top 6 inches, trace
				coarse sand, at 4.25 feet a 3 inch sand and gravel lense, sand medium to coarse
				with fine, some very fine and very coarse, trace silt, very poorly sorted, gravel
				½ to 1 inch, subround, at 4.5 to 5 feet sandy silt, soft (.5) sand fine to medium
				some coarse, trace pea gravel.
95	100	5	3.5-4.5/	0-2.0': Silt. Red brown (5 YR 4/3) with alternating sequence of very fine to fine
			0-5.9	silty sand that is gradational to very fine sandy silt. Silt is soft (1.0), trace clay, variable
				sand, silty sand/sandy silt is saturated, sand fine to very fine, some medium.
				2.0-5.0': Silt. Color as above, trace to some clay, fairly homogeneous, moderately
				plastic, medium stiffness (2.0), wet.
100	105	5	3.5-4.5/0	Silt. Color as above, trace clay, inclusions/lenses, red (2.5 YR 5/6), moderately
				effervescent, plastic. In bottom 2 feet several very thin (<1 mm) sand seams,
				(very fine to fine trace medium), silt parts along sand seams.
105	110	5	3.5-20/0	0-1.0': Sand. Grey brown (10 YR 4/2) fine with very fine, some silt, moderately
				well sorted, dense, wet, several small (1 inch) lenses of silt interspersed, red
				brown (5 YR 5/3), medium stiffness (1.75), trace clay, and very fine sand.
				1.0-2.0': Silt. Red brown (5 YR 5/3) trace to some clay, moderately plastic where
				clay content increases, medium stiffness.
				2.0-5.0': Clay. Red brown (5 YR 4/2) to red brown (2.5 YR 4/4) silty, sandy, with gravel
				(till), matrix supported, very stiff to hard (3.5->4) moderately plastic where clayey.
				Sand ranges from fine to very coarse, gravel 1/8 to 4 inches, subrounded to
				angular, very moist to wet, slightly effervescent.
110	115	5	18-90/0	Till. Red brown (2.5 YR 4/3) silty, sandy clay matrix, till as above slightly moist, hard.
115	120	5	15-25/0	Till. Red brown (2.5 YR 4/4) as above, cored through large slate gravel from
				2.5 to 3 feet.
120	125	5	4-20/0	Till. Color as above, silty, sandy, clay matrix, matrix supported, composition

0	55		--	Blind drill. See sample core log for GMSB-100.
55	60	5	1,750-	0-5.0': Silt. Red brown (5 YR 5/4) HP 2.75 dense, dry, hard, mildly effervescent,
			>10,000/0-.8	massive, interbedded with clay red brown (2.5 YR 4/4) platy to blocky, dense hard
				(HP 2.75) dry, strongly effervescent and clay brown (7.5 YR 5/3) very plastic,
				variable silt, weakly effervescent. Clay interbeds ranges in thickness from 1 to
				approximately 9 inches and clay brown (7.5 YR 4/3) very thinly bedded to fissile,
				mildly effervescent.
60	65	5	>10,000/	0-1.25': Silt. As above, but with trace sand, light brown (7.5 YR 6/3) occurring in
			0.3-0.9	fractures in silt, very thinly bedded.
				1.25-3.25': Sand. Light brown (7.5 YR 6/3) very fine, silty, trace clay. Silt
				occurring thin beds, approximately 1 inch, with clay bedded within.
				3.25-4.5': Sand. Pink (7.5 YR 7/3) very fine, color grades from the light brown to
				pink between 3.25 - 4.00, silty, dry. Silt bed occurs at 3.75 brown (7.5 YR 5/2)
				1 inch thick laminated dense. HP = 0.75
				4.5-5.0': Sand. Pinkish grey (7.5 YR 6/2) very coarse to very fine, gravely, 2 mm to
				2 inches, subrounded trace silt, weakly effervescent, (some CACO3 cementing
				between grains).
				Collect GM-53/63 for treatability and methanotrophic enumeration.
65	70	2.5	>10,000/-	Sand. Sample collected in acrylic liner. Medium to coarse, some very coarse and
				fine (variable) small gravel 1/8 to 3/4 inch, subrounded. Two cycles along
				core, coarse to very coarse variable medium and fine at top, approximately 1 foot,
				to approximately 1 foot of medium with coarse, some fine and very fine, to .5 feet
				of coarse to very coarse sand, saturated, moderate to poorly sorted, medium
				dense.

Sample/Core Log (Cont.d)

Boring/Well GMSB-17

Prepared by Ted Powell

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/PID	Sample/Core Description
70	75	5	-/-	Collect 5 feet acrylic liner for treatability sample. Appears to be sand, as above.
75	80	3	3.5-3,500/	Sand. Brown (7.5 YR 4/2) medium to coarse, some fine, trace very fine and silt,
			0-.6	moderately sorted, medium dense, trace grave ¼ to ½ inch, subrounded,
				saturated.
80	85	4	1,000-	0-2.0': Sand. Color as above, fine to medium, trace coarse and very coarse and
			>10,000/0-.5	very fine, moderately sorted, medium dense, saturated, trace gravel 1/8 to ½
				inch, subrounded.
				2.0-4.0': Sand. Dark brown (7.5 YR 4/1) coarse and medium, some very coarse,
				trace fine and very fine, some gravel 1/8 to 1 inch subrounded, medium dense,
				moderate sorting.
85	90	5	300-	0-4.0': Sand. Brown (7.5 YR 4/3) medium with coarse, some very coarse and fine,
			>10,000/	trace very fine, some gravel, approximately 20 percent, 1/8 to 2 inches, subrounded
			0-.01	to subangular, 2 inch gravel at basal contact with silt, poorly sorted, medium
				dense.
				4.0-5.0': Silt. Red brown (5 YR 4/4) very moist to wet, trace very fine sand, trace
				clay fairly homogenous, stiff (3.25), clay lenses interbedded throughout. Lense
				¼ to ½ inch thick, red (2.5 YR 4/6) fissile, strongly effervescent, moderate
				plastic, very moist, collect treatability sample GM-53/90.
90	95	5	8,500-	Silt. Red brown (5 YR 4/4) trace very fine sand, abundant gas vesicles, soft to
			>10,000/	medium stiff (1.25 to 2.5) very moist, several thin (1/8 inch) clay seams from
			.1-1.2	0 to .5 feet, clay as above.
95	100	5	1,500-	0-2.5': Silt. As above.
			>10,000/	2.5-4.0': Silt. Red brown (2.5 YR 4/3) with very fine sand, soft (1.0), interbedded
			0-.4	with two cycles of silt, red brown (5 YR 4/3) very homogenous, very stiff (3.5)
				slightly moist to moist, silt layers 3 to 4 inches thick.
				4.0-5.0': Sand. Red brown (2.5 YR 4/3) very fine, very silty, loose to medium
				dense, well sorted.
100	105	5	1,250-	Silt. Colors range from red brown (2.5 YR 4/3) to red brown (5 YR 4/4).
			>10,000/	Abundant gas vesicle from 0 to 1.5 feet, wet, trace to very sandy with very fine
			.4-.7	sand, very sandy from 3 to 4 feet, saturated, soft. Remainder of silt in core is
				very homogenous.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
95	100	5	8-70/	0-1': Sand. Dark reddish gray (5 YR 4/2), trace very fine to fine, medium,
			0.0-1.0	abundant silt content (silt nodules within the sand and silt layer (coating) on
				the outside of the sand, perhaps caused by drill rig?)
				1-5': Sand, dark reddish gray (5 YR 4/2), trace very fine to fine, medium,
				moderate to poorly sorted, loose, damp.
100	105	5	20-58/	0-5': Sand. As above.
			0.2-0.7	
105	110	5	9.5-36/	0-3': Sand. As above.
			0.3-0.9	3-5': Sand. Dark reddish gray (5 YR 4/2), trace very fine to fine medium, high
				silt content (numerous silt nodules/inclusions throughout).
110	115	5	10-22/	0-4': Silt. Dark reddish brown (5 YR 3/3), trace clay, sand content increases as
			0.3-0.7	you go down section and last 2' is sandy (very fine to fine) silt.
				4-5': Sand. Dark reddish gray (5 YR 4/2), trace very fine to fine, medium,
				moderately to poorly sorted, loose, damp.
115	120	5	5-12/	0-5': Sand. As above.
			0.4-0.2	
120	125	5	4-8.5/	0-4.5': Clay, dark reddish brown (2.5 YR 3/4), (HP = 3.0), very stiff. Silt. Dark
			0.4-1.3	reddish brown (5 YR 3/3), numerous clay layers/laminations throughout. Silt:
				moderate to well compacted.
				4.5-5': Sand. Dark reddish gray (5 YR 4/2), very fine to fine, silty, well sorted,
				loose, damp.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
0	5	5	0-0	0-3.0' Sand: Strong brown (7.5YR 4/6), fine to very fine silty gravelly (2mm to
				>60 mm), subangular to subrounded, some clay, trace coarser sand, dry.
				3.0-5.0' Sand: Strong brown (7.5 YR 4/6), medium to fine some coarse some
				gravel (2 mm to 40 mm) subangular to subrounded, dry.
5	10	5	0-0	0-3.0' Sand: Strong brown (7.5 YR 4/6), medium to very fine silty gravelly (2mm to
				60 mm) subrounded, trace clay, dry.
				3.0-4.75' Sand: Strong brown (7.5 YR 4/6), coarse to medium, some to trace fine,
				some gravel (2 mm to 3") subround to rounded, trace moisture at bottom.
				4.75-5.0' Clay: Red brown (2.5 YR 4/3), dense (HP = 3.0), massive to laminated,
				dry.
10	12.5	2.5	0-0	0-2.5' Clay: As above.
12.5	15	0		No recovery.
15	20	5	0-0	0-3.0' Clay: Reddish brown (5 YR 4/3), dense (HP = 2.5), interbedded very fine to
				fine grain sand, dry.
				3.0-5.0' Silt: Brown (7.5 YR 4/3), trace amount of very fine sand, dense (HP = 3.0),
				very moist at 18.5.
20	25	5	2.5-7.0	0-0.5' Clay: Reddish brown (5 YR 4/3), some silt, soft, moist.
				0.5-5.0' Sand: Light brown (7.5 YR 6/4), fine to very fine grain size loose, well
				rounded subrounded, dry.
25	30	5	2.25-9.5	0-0.5' Sand: Some silt brown (7.5 YR 4/4), fine grain size, loose, subrounded,
				moist (0.5-5.0) sand brown (7.5 YR 6/4), fine to very fine grain size subrounded
				to some silt subangular, well sorted, wet.
30	35	5	2.5-6.25	Same as above.
35	40	5	6.0-45	0-5.0' Silty Sand: Silt dark brown (10 YR 3/3), sand brown (7.5 YR 4/4), fine to
				very fine grain size well sorted, subrounded to subangular, wet.
40	45	5	3.0-8.75	0-5.0' Silty Sand: Dark brown (7.5 YR 3/4), fine to medium grain size, some very
				fine grain size, well sorted, subrounded, wet.

Boring/Well GMSB-100 Page 2 of 3

Prepared by Ray Flynn

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)/OVA	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
				subanuglar to subrounded, variable composition, trace pebble gravel. Loose,
				damp, no HCl reaction
16	18		5,6,6,3	No recovery.
18	20	24/20		0-7.0": Sand. Coarse. As above.
				7.0-24": Sand. Pink (7.5 YR 7/3), medium, very well sorted. Loose, damp.
				Saturated at lowest 5 inches (19 to 24 inches), no HCl reaction.
18	20	15/6	3,4,1,1	0-3.0": Sand. Reddish grey (5 YR 5/2), medium to fine, trace gravel, well sorted,
				loose, very damp to saturated.
				3.0-15": Sand. Reddish grey (5 YR 5/2), medium to coarse (coarser toward base),
				trace pebble gravel, loose, saturated
20	22	17/3.5	4,3,5,7	0-3.0": Gravel. Pinkish grey (7.5 YR 6/2), granular, abundant coarse sand, trace
				loose, saturated, sub and pebble gravel.
				3.0-17": Sand. Pinkish grey (7.5 YR 6/2), medium. Well sorted, loose,
				saturated, no HCl reaction.
22	24	21/10	4,5,7,9	0-8.0": Sand. Medium, as above, trace rounded pebble gravel, becoming
				more gravelly toward base.
				8.0-16": Gravel. Light brown (7.5 YR 6/4), granular, coarse to fine sand matrix,
				trace silt, subrounded to well rounded, loose, saturated, no HCl reaction.
				16-21": Silt. Brown (7.5 YR 4/4), HP = 0.5, very damp, slight HCl reaction.
24	26	19/7	10,9,9,15	0-14": Sand. Coarse. Slough (composition as above).
				14-19": Silt. Color as 16 to 21 inches above, but HP $\geq$ 4.0 and strong
				HCl reaction, slightly damp, clay lens at 19½ inches, strong HCl reaction.
26	28	19.5/10	6,6,8,9	0-9,0": Sand. Fine (slough?) Saturated, loose, well sorted.
				9.0-19.5": Silt. Color as silt above clayey, HP = 3.0. Slightly plastic, strong
				HCl reaction.
28	30	21/9	6,8,10,10	0-21": Silt. As above with clay lenses at 11 inches (½ inch thick) and 20 inches
				(¼ inch thick). Clay color red (2.5 YR 4/6), strong HCl reaction in clay and silt.
				HP (clay) = 2.5 HP (silt) = 3.0.
30	32	24/9	6,8,11,10	0-24": Silt. As above with clay layers at 5.5 inches (1/6 inch) and 6 inches (2
				inches). Silt: HP = 2.5, very damp, moderate HCl reaction. Clay: HP = 1.0,
				strong HCl reaction, very damp.
32	34	17/6	4,6,8,10	0-14": Silt. Brown (7.5 YR 5/4), HP = 1.2. Clay lens at 2 inches (2 inch thick).
				Silt moderate HCl reaction. Clay strong HCl reaction, saturated.

			3.4/6.9	2-3': Clay/Silt/Gravel/Sand, yellowish red clay (5 YR 4/6), plastic soft, mixed with
				silt, fine to coarse gravel, angular to subangular and mostly black, and fine to
				very fine sand, somewhat soft, clay plastic, wet, odor.
				3-4': Sand, brown (7.5 YR 4/3), mostly fine grain, some very fine grain, well
				sorted, loose, wet, odor.
				4-4.5': Clay/Gravel, silt, as above.
				4.5-5': Sand, brown (7.5 YR 4/3), very fine grain, well sorted with trace fine
				black gravel angular to subangular, loose, wet, odor.
155	160	5	6.5-55/	0-2': Silt, brown (7.5 YR 5/2), somewhat firm (HP 1-2.0), moderately effervescent
			-8/-6.4	with HCL, sandy with very fine grain sand from 1-1.5, wet, no odor.
				2-5': Clay/Silt, silt as above, no sand, interbedded and varved with clay
				yellowish red (5 YR 4/6), clay dense somewhat plastic, fissile looking on
				broken surfaces, extremely effervescent with HCL, very dense 2-3 and mostly
				clay (HP >4.0), varving 2 mm and less, wet, no odor.
160	165	5	8-19/-7.5/	Silt/Clay, as above, very thinly varved, wet, no odor, .2" fine sand seam at 4.2.
			-6.7	
165	170	5	55-470/	0-2': Silt, brown (7.5 YR 5/2), no clay, firm (HP 2-3) somewhat soft, wet, no odor.
			-6.1/-1	2-3': Silt/Clay, as above, varved.
				3-5': Silt, as above, no clay.
170	175	5	120-505/	0-1': Sand, brown (7.5 YR 5/2), fine grain, well sorted, trace fine black gravel,
			-1.9/+7.0	loose, 0.5-0.7 sand/gravel seam, fine to coarse sand and fine to coarse gravel,
				very poorly sorted, subangular to subround, loose, wet, slight odor.
				1-2.5': Silt, brown (7.5 YR 5/3), very clayey, slight plastic, trace fine gravel,
				wet, slight odor.
				2.5-5': Silt/Gravel (Till?), dark gray (2.5 YR 4/1), very dense (HP >4.0), mixture of
				fine to very coarse gravel, angular to subangular in silt matrix, some fine to
				coarse sand grains in silt also, trace cobbles to 4" diameter, moist, no odor.
175	180	5	0.9-23/	0-3': Gravel/Silt/Clay, dark gray (7.5 YR 4/1), silt/clay matrix, very sticky, soft
			-11/-10	with fine to very coarse gravel, mostly angular to subangular, but also subround,
				cobbles to 3" diameter, angular black bedrock, much softer than above, wet,
				no odor.
				3-5': Silt, brown (7.5 YR 4/3), somewhat clayey, slight plastic to soft, trace fine
				to coarse gravel as above, wet, no odor.

			-17.8/-9.9	with some fine to very coarse sand, and much fine to very coarse gravel and
				cobbles to > 4" diameter, very poorly sorted, very dense, firm, matrix is somewhat
				plastic, wet, no odor.
				2-5': Silt/Gravel, dark brown (7.5 YR 3/3), silt matrix with fine to very coarse
				gravel and cobbles to >4" diameter, mostly angular black gravel,
				Michigamme shale, very dense, firm (HP 3.5) moist, no odor.
170	175	5	45-230/	0-1': Silt/Gravel, as above.
			8.9/32	1-5': Silt/Gravel/Sand (Till), bluish black (Gley 2.5/1) and dark yellowish brown
				(10 YR 4/4) (black 1-2 brown 2-5), extremely dense (HP >4), till mixture of mostly
				silt and gravel with some fine to very coarse sand grains. Silt matrix with fine
				to very coarse gravel, angular, subangular and subround, also cobbles and rock
				pieces of weathered bedrock pulverized by drilling, very hard, brittle, dry,
				no odor.
175	180	5	35-110/	Silt/Gravel Till, as above, crumbled and broken, loose, dry, no odor.
			10-17	
180	185	5	5.4-35/	0-0.5': Silt/Sand/Gravel, yellowish red (5 YR 5/6), dry crumbled silt, fine to
			13-17	coarse sand, fine to coarse gravel to cobbles 3" diameter, mostly angular,
				broken pieces rock oxidized red, dry, no odor.
				0.5-5': Silt/Gravel/Rock, grayish brown (10 YR 5/2), crumbled pieces till,
				silt, gravel, broken rock fragments, gravel fine to very coarse, angular to
				rounded, cobles to 2" diameter, silt (till) pieces very dense, loose, dry, no
				odor.

			-12 - -11	coarse to very coarse gravel subangular to subround, silty, loose, wet, odor.
				1.0-2.0' Sand: Brown (7.5 YR 4/3), very fine grain silty, well sorted, silt seam 1.5-
				1.7', silt some what plastic, sand loose to sticky, wet, odor.
				2.0-5.0' Silt: Brown (7.5 YR 4/3), clayey very clayey 3 to 4 feet, trace fine to
				very coarse gravel throughout, angular to subangular, silt soft (HP 0.5-1), clay silt
				somewhat plastic, wet, odor.
150	155	5	2500-46600/	0-1.0' Silt/Sand/Gravel: Very dark grayish brown (10 YR 3/2), very heterogeneous
			-13-11	mixture of fine to coarse sand, fine to very coarse gravel, angular to subround,
				trace cobbles to 2" diameter, very poorly sorted, somewhat loose, but sticky clayey
				matrix, wet, odor.
				1.0-5.0' Sand: Very dark grayish brown (10 YR 3/2), predominately coarse to very
				coarsest grain, sand with fine to medium grain and trace fine to coarse gravel,
				moderately sorted, loose, wet, strong odor.
155	160	4	170-3300/	0-2.0' Gravel: Variable colors, fine to very coarse gravel and cobles to 3" diameter,
			-6 - 7	angular to subround, very poorly sorted, loose, wet, no odor.
				2.0-4.0' Silt/Sand/Gravel: Dark gray (10 YR 4/1), dense mixture of fine to coarse
				sand, fine to coarse gravel in a silt matrix, cobbles to 4" diameter and broken
				rock, firm (HP >4), wet, odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
0	125	--	--	Blind drill, see core log for GM-25A/B/C.
125	130	5	1700-	0-1': Sand/Silt, sand brown (7.5 YR 4/3), silt reddish brown (5 YR 4/4), sand is
			34000/	very fine grain, some fine, well sorted silt, soft, some clay, somewhat plastic,
			3.7-4.3	sand/silt are thinly interbedded 2" and less, sand silty in some layers, wet, odor.
				1-2': Sand, brown (7.5 YR 4/3), fine grain well sorted, loose, wet, strong odor.
				2-4': Sand, brown (7.5 YR 4/3), very fine grain, very silty, well sorted, trace
				medium to coarse grain black angular slate flakes, somewhat loose to very
				sticky, wet, slight odor.
				4-4.5': Sand, color as above, very fine grain, well sorted, little silt, wet, slight
				odor.
				4.5-5': Silt, brown (7.5 YR 4/3), soft, very clayey, somewhat plastic, wet, strong
				odor.
130	135	5	11000-	0-1': Silt, as above.
			67000/	1-4.5': Silt, brown (7.5 YR 4/3), less clayey, soft, somewhat to non plastic, very
			3.5-5.2	sandy 3-4 with very fine grain sand, trace clay layer at 4.2 reddish brown
				(5 YR 5/4), plastic, fissile looking on broken surface, wet, odor.
				4.5-5': Sand, brown (7.5 YR 4/3), very fine to extremely fine grain, well sorted
				loose, some silt, wet, odor.
135	140	5	4680-	0-0.5': Silt, brown (7.5 YR 4/3), slight firm to soft, some fine to coarse gravel,
			50500/	trace black staining, wet, strong odor.
			2.2-5.8	0.5-3': Sand, strong brown (7.5 YR 4/6), very fine to fine grain, well sorted,
				loose, wet, strong odor.
				3-5': Sand, brown (7.5 YR 4/3), fine grain, very well sorted, trace fine to
				coarse black angular shale flakes, loose, wet, strong odor.

Sample/Core Log (continued)

Boring/Well GMSB-122

Prepared by Bruce Evans/Jason Dowling

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA (ppm)	Sample/Core Description
140	145	5	13500-	0-1': Sand, brown (7.5 YR 4/3), as above, fine.
			776000/	1-3': Sand, brown (7.5 YR 4/3), very fine to fine grain, well sorted, some silt,
			4.3-5.4	loose, wet, strong odor.
				3-5': Sand, brown (7.5 YR 4/3), mostly fine grain, some very fine and medium
				grain, abundant black angular shale flakes medium to coarse grain size,
				trace to some silt, moderately sorted, loose, wet, strong odor.
145	150	5	8000-	0-1': Sand, brown (7.5 YR 5/2), fine to very coarse sand, silty, with some fine to
			56000/	medium gravel, subangular to subround, trace cobbles to 2" diameter, very
			1.5-3.9	poorly sorted, much angular black shale flakes, loose but somewhat sticky, wet,
				strong odor.
				1-2': Silt/Clay, silt brown (7.5 YR 4/3), clay yellowish red (5 YR 4/6), thinly
				interbedded and varved, clay plastic, fissile looking on broken surfaces, silt soft,
				wet, strong odor.
				2-3.5': Sand, brown (7.5 YR 5/3), very fine grain, silty, some fine grain, loose,
				wet, strong odor.
				3.5-5': Silt/Clay, as above interbedded and varved, many vescules forming on
				broken surfaces, wet, strong odor.
150	155	5	22000-	0-1': Silt/Clay, as above, interbedded, wet,odor.
			>76900/	1-4': Silt/Clay, as above but also with seams fine to very fine sand, 0.2-3" thick,
			3-3.1	especially sandy 2-3, wet, strong odor.
				4-5': Sand, brown (7.5 YR 5/3), very fine grain, some fine grain, well sorted,
				loose, wet, very strong odor.
155	160	5	7600-	0-3': Sand, brown (7.5 YR 4/2), mostly fine grain, with very fine and medium
			21000/	grain, some coarse grain but mostly black angular shale flakes, some silt,
			2.1-4.6	poor to moderately sorted, loose, slightly sticky, wet, strong odor.
				3-5': Silt/Clay, as above interbedded, wet, strong odor, many vescules.
160	165	5	1700-	0-1.5': Silt, brown (7.5 YR 4/2), very sandy with very fine grain sand, some clay,
			53000/	somewhat loose, wet, strong odor.
			1.7-3.0	1.5-2': Sand, brown (7.5 YR 4/2), very fine grain, very silty, loose, wet, strong
				odor.
				2-5': Silt, brown (7.5 YR 4/3), trace red to yellow clay, somewhat firm (HP = 2.0)
				very sandy from 4-4.7 with very fine grain sand, interbedded yellow red clay from
				4.7-5, wet, strong odor, vescules where clayey.

Prepared by Bruce Evans

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				3.0-5.0' Sand: Reddish brown (5 YR 5/3), very fine grain, very silty, well sorted,
				loose, wet, no odor.
90	95	5	100/3.5	Silt: Reddish brown (5 YR 4/3), very clayey, moderately plastic, trace varving with
				yellowish red (5 YR 4/6) clay, clay very effervescent with HCL, plastic, yet fissile
				looking on broken surface, looking on broken surface, wet, no odor.
95	100	5	13/5.0	Silt: As above matrix extremely clayey moderately plastic to plastic, wet, no odor.
100	105	5	35/4.8	Silt: As above 2" very fine grain sand seam at 1.5'.
105	110	5	440/5.5	Silt: Very clayey as above, wet trace clay layers yellowish red.
110	115	5	650/6.4	0-1.5' Silt: As above.
				1.5-3.5' Silt: Brown (7.5 YR 4/3), grainy, some very fine grain sand, somewhat
				loose, wet, no odor.
				3.5-5.0' Silt: Reddish brown (5 YR 5/3), very clayey silt, moderately plastic to
				plastic with some varving of somewhat grainy silt with clayey silt, trace yellowish
				red clay in varves, wet, no odor.
115	120	5	-29-28/	0-1.5' Silt: Brown (7.5 YR 5/4), silt grainy trace clay, reddish brown (5 YR 4/4),
			226-249	slight plastic to clayey, wet, cohesive, mild odor, very sandier lenses.
				1.5-5.0' Sand: Brown (7.5 YR 4/2), very fine to fine, loose, well sorted, strong
				odor, wet.
120	124	4	-24.42-21.98/	0-3.0' Sand: As above with trace clay nodules, reddish brown (7.5 YR 4/4),
			3220-3980	platy in appearance, cohesive, sand somewhat loose, strong odor.
				3.0-4.0' Silt: Reddish brown (7.5 YR 4/4), grainy to clayey, slightly plastic, slightly
				cohesive where clayey, some to much clay in layers or nodules, somewhat crumbly
				where no clay.
124	128	4	-20.89- -15.2/	0-1.0' Silt: As above, grainy, smooth in places, clay as above.
			392-972	1.0-2.5' Silt: Reddish brown (5 YR 4/2), fissile in appearance, crumbly, firm to hard,
				some clay nodules, strong odor, moist some gravel, angular to subround, up to 2".
				2.5-4.0' Mixtures of as above, firm/hard with some phyllite chunks, loose and
				crumbly, very poorly sorted, pieces of phyllite have been broken up because of
				drilling, dry to trace moist, dark reddish brown (5 YR 3/3).
128	133	5	-11.52 - -10.51/	0-1.5' Silt: Yellowish red (5 YR 5/6) crushed gravel with silt matrix (silt possibly from
			220-503	drilling), loose, dry, mild odor, much gravel, platy, possible broken up bedrock, up
				up to 2" (phyllite).
				1.5-2.0' As above, reddish brown (5 YR 5/4) color change due to increase of
				crushed lighter phylite pieces.
				2.0-2.5': As above, yellowish red (5 YR 6/8) with less platey pieces, more rock
				chucks more dust/silt, loose, dry, mild odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				2.0-4.5' As above, but with fragments pulverized, pink (5 YR 7/4).
				4.5-5.0' As above, trace silty clay nodule, yellowish red (5 YR 4/6).
133	136	3	-15.32 - -15.0/	0-2.0' Clayey Silt: As above, could be pulverized from drilling, loose, dry, strong
			404-596	odor, somewhat adhesive, some to much phyllite gravel up to 3.5", rounded
				pebbles with gravel, not phyllite gravel.
				2.0-3.0' Silty Clay: Dark reddish brown (5 YR 5/3) somewhat cohesive, somewhat
				plastic, moist, odor, much crumbly rocks (looks like phyllite) that pulverize when
				worked.
136	145	3	-33.94-30.12/	0-1.5': Crushed phyllite bedrock and gravel up to 4" angular to subround.
			19-38.1	1.5-3.0' Phyllite rock with quartz veins green with reddish staining, quartz is
				light (white) 5-1/2" solid core, from 1.9-2.45' rest are pieces up to 4".
				EOB @ 145 feet.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5.0	3.46-4.73/	0-1.5' Topsoil (silt and sand), very dark brown (7.5 YR 2.5/3), sand very fine to
			5.84-6.59	medium, loose to somewhat cohesive, trace gravel round to subround up to 1.5",
				trace clay, organics (leaves and rootlets), some coloring at 1.0' yellowish red
				(5 YR 4/6) mainly in sandy zones, grades over 1-1.5 into section below, moist,
				no odor.
				1.5-1.8' Sand: Silty and gravel, strong brown (5 YR 4/6), hard to crumbly, sand
				fine to medium, gravel up to 1.5", moist no odor.
				1.8-3.0' Sand: Color as above, fine to medium grain (mostly fine grain), trace to
				some coarse grain, trace gravel up to 1.25" subround to subangular, trace rootlets,
				loose, moist, no odor.
				3.0-5.0' Sand: Brown (7.5 YR 4/4), fine to medium grain, mainly medium grain,
				trace coarse grain, trace gravel up to 1.5" subround to subangular, loose, moist
				to dry, no odor.
5	10	0	--	No recovery.
10	15	5	1.33-1.41/	0-3.5' Sand: As above (3-5) grading into more coarse grain (some coarse), gravel
			9.49-5.34	angular to round up to 4.5", predominately medium grain, wet, loose, no odor.
				3.5-5.0' Sand/Silt/Gravel: Dark brown (7.5 YR 3/4), sand very fine to medium,
				mainly fine, gravel up to 1.5" round to subangular, packed hard, crumbly when
				worked, moist, slight odor, some staining-green, red, orange.
15	20	3	1.06-2.77/	0-1.0' Slough with grass and leafs and roots.
			17-47	1.0-1.5' Sand: Brown (10 YR 4/3), medium grained, some fine to coarse, some to
				much silt trace to some gravel up to 3/4", somewhat sticky, wet to saturated,
				no odor.
				1.5-3.0' Silt: Dark brown (10 YR 3/3), some fine to coarse sand, mainly medium
				grain, trace gravel up to 3", fairly loose, saturated interval from 1.5-1.8, moist
				otherwise, no odor, trace hard piece turn crumbly when worked.
20	25	3	1.02-0.59/	0-0.75' Silt: As above.

Boring/Well GMSB-130

Prepared by Paul Lenaker/Lori Schmidt

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
			6.7-7.8	0.75-2.25' Sand: Dark yellowish brown (10 YR 3/6), fine to medium grain, mainly
				fine grain, trace coarse, trace silt, trace gravel up to 1", loose, moist, no odor.
				2.25-3.0' Silt/Sand/Gravel: Brown (10 YR 4/3), sand very fine to coarse, gravel to
				2.5" angular to subround, no odor, loose, dry, no odor pulverized and dust.
25	30	5	2.07-5.90/	0-3.0' Sand/Gravel: Coarse, dark brown (10 YR 3/3), mainly coarse sand, trace to
			11.5-13	some fine to medium grain, loose, wet, no odor, grades over 1.5-2.0 into section
				below.
				3.0-4.5' Silt/Sand/Gravel: Brown (10 YR 4/3), sand fine to coarse, gravel up to 3.5"
				round to subangular, somewhat loose, trace red staining, moist, no odor.
				4.5-5.0' Sand: Brown (7.5 YR 4/4), very fine to fine, loose, trace gravel up to 1/2",
				round to subround, moist, no odor.
30	35	5	1.31-2.11/	0-0.5' Sand: As above.
			3.9-4.5	0.5-2.0' Sand: Color as above, fine to medium grain, mainly fine, some medium,
				trace coarse, loose, moist, no odor.
				2.0-5.0' Sand: Light reddish brown (5 YR 6/4), very fine to fine, well sorted, loose,
				trace to some silt, no odor, moist, silt is generally in layer/lense.
35	40	5	3.63-4.04/	0-2.2' Silt: Brown (7.5 YR 4/4), smooth to grainy, somewhat cohesive to crumbly,
			20.1-22.6	trace clay lenses (or nodules red - 7.5 YR 4/6) some black staining, moist.
				2.2-4.2' Sand: Color as above, very fine to fine to silt, loose, well sorted, moist,
				no odor.
				4.2-5.0' Silt: Pink (5 YR 7/3), grainy, loose, dry, no odor.
40	45	5	3.71-5.44/	0-1.5' Silt: As above, moist,
			2.9-5.6	1.5-2.5' Silt: As above, with some to trace very fine sand, some firmly packed
				chucks that break-up when worked.
				2.5-5.0' Sand: Color as above, very fine grain, very well sorted, trace silt (and in a
				nodules) loose, dry, no odor.
45	50	5	0.15-0.71/	0-2.0' Sand: Brown (7.5 YR 5/4), fine grain, some very fine, well sorted, loose, moist
			438/1198	to wet, no odor.
				2.0-2.8' Silty Sand: Strong brown (7.5 YR 4/6), sand very fine to fine, fairly well
				sorted, some black staining, loose, moist, no odor.
				2.8-3.5' Sand: Color as above with black staining, very fine to fine, some silt,
				loose, moist, no odor.
				3.5-5.0' Sand and Silt: Pink (7.5 YR 7/3), sand very fine, loose, dry, no odor,
				dusty.
50	55	5	2.22-3.88/	0-1.0' Sand and Silt: As above.
			2780-2800	1.0-1.3' Silt: Strong brown (7.5 YR 4/6), smooth, crumbly and noncohesive,
				smooth, moist, no odor.

Sample/Core Log (continued)

Boring/Well GMSB-130

Prepared by Paul Lenaker/Lori Schmidt

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				1.3-2.0' Silt: Light brown (7.5 YR 6/4), grainy, loose, trace to some very fine
				sand, moist to dry, no odor.
				2.0-3.0' Silt: Brown (7.5 YR 4/4), crumbly, smooth, trace clay nodules (yellowish
				red - 5 YR 4/6) moist, no odor.
				3.0-3.5' Silt: As above, interbedded with sand, very fine to fine, loose, dry.
				3.5-5.0' Sand: Light reddish brown (5 YR 6/3), very fine to fine, loose, some silt
				in lense, smooth to grainy silt, well sorted, dry to moist, no odor.
55	60	5	7.02-1.62/	0-5.0' Sand: As above, but fine to very fine, silt in nodules, moist to dry.
			8120-8500	
60	65	5	8.13-9.04/	0-2.0' Sand and Silt: Reddish brown (5 YR 5/4), sand very fine to fine, silt smooth
			3700-5800	to grainy, loose, clumpy in spots, moist, no odor, some intertwined
				predominately fine sand from 1-2, trace black staining coarser down section.
				2.0-5.0' Silt and Sand: Brown (7.5 YR 4/4), silt, smooth to grainy, sand very fine
				to fine, some black staining, trace clay lenses, somewhat layered to somewhat
				firmly packed to crumbly, moist to wet, mild odor sand fine grain layer from
				4.2-4.6.
65	70	5	2.47-2.70	0-5.0' Silt and Sand: As above, becoming wet, water at <2.0-3.5', somewhat
			253-1291	sticky from 4-5 more (some to much black staining) some odor.
70	75	5	0.10-5.13/	0-1.0' Silt and Sand: As above.
			12.25-2800	1.0-2.0' Silt and Sand: As above, with trace gravel to 1/4" subround, interbedded
				with sand very fine to fine grain, loose, well sorted, odor.
				2.0-5.0' Sand: Brown (7.5 YR 4/4), fine grain, some very fine, loose, well sorted,
				moist to wet at 2-2.5 sand is very fine to silty and grades to fine to very fine at
				4.7' silt lense approximately 0.2-0.3' thick, grainy to smooth.
75	80	5	0.80-1.80/	0-4.0' Silt and Sand: Brown (7.5 YR 4/4), interbedded/laminated layers of very fine
			1119-1540	to fine sand and grainy to smooth silt, trace clay nodules, wet to saturated, slight
				odor.
				4.0-5.0' Silt: Dark brown (7.5 YR 3/4), smooth to somewhat cohesive, wet/
				saturated clay lense at 4.8', clay dark reddish brown (5 YR 3/4), some odor.
80	85	5	0.04-0.12	0-2.5' Silt: As above.
			1580-2391	2.5-5.0' Sand: Color as above, very fine to fine, loose, wet, some odor, well sorted,
				trace silt.
85	90	5	0.50-4.30/	0-1.0' Sand: As above, strong odor.
			529-1080	1.0-4.8' Silt: Dark reddish brown (5 YR 3/4), smooth to grainy, some very fine,
				trace clay, somewhat interspersed sand lenses, trace clay lenses, overall somewhat
				cohesive to somewhat loose, wet, some odor.

Sample/Core Log (continued)

Boring/Well GMSB-130

Prepared by Paul Lenaker/Lori Schmidt

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				4.8-5.0' Silt: Dark brown (7.5 YR 3/6), grainy, some to trace very fine sand, loose
				to crumbly, wet, odor.
90	95	5	0.52-1.04/	0-1.0' Silt: As above.
			152-199	1.0-5.0' Silt: Color as above, smooth, slight cohesive, trace clay, clay in lenses, (red
				2.5 YR 4/6) wet, odor.
95	100	5	-0.7- -0.9/	0-4.0' Silty Clay: Reddish brown (5 YR 4/4), cohesive, somewhat plastic, sticky,
			20-191	wet, some odor.
				4.0-5.0' Silty Clay: As above, somewhat cohesive, slight plastic, slight sticky, wet,
				some odor.
100	105	5	1.66-2.99/	0-1.0' Silty Clay: As above, grading into section below.
			2390-7100	1.0-5.0' Silt: Brown (7.5 YR 4/4), some to much clay, slight cohesive to crumbly,
				smoother, trace clay lense dark reddish brown (5 YR 3/4).
105	110	5	1.72-4.49/	0-5.0' Silty: As above, with only trace to some clay, with some clay lenses
			2950-4600	becoming crumbly down section.
110	115	5	1.18-1.46/	0-4.5' Silt: As above, lenses die out in section below, becomes less clayey down
			1233-2100	section.
				4.5-5.0' Silt: Reddish brown (5 YR 4/4) hard and crumbly, moist to dry, odor.
115	120	5	-0.79- -0.69/	0-2.0' Silt: Brown (7.5 YR 4/3), grainy with some very fine sand, somewhat loose,
			2600-7000	wet, odor, interbedded with silt, reddish brown (5 YR 4/4), grainy, somewhat
				loose, wet, odor.
				2.0-5.0' Sand: Brown (7.5 YR 4/3), very fine grain trace to some fine, trace
				medium.
120	125	5	-0.02-0.4/	0-4.0' Sand: Brown (7.5 YR 4/3), fine grain, some medium and very fine, fairly well
			7400-13600	sorted, loose, wet, odor.
				4.0-4.5' Sand: Color as above, very fine to fine grain, trace medium, well sorted,
				loose, wet, odor.
				4.5-5.0' As below, silt.
125	130	5	1.4-3.21/	0-2.0' Silt: Dark reddish brown (5 YR 2/4), smooth, some clay, 'pod' of hard
			1922-23000	greenish colored, silt with coarse sand (some) and grainy to 1"-pod approximately
				3" diameter dark reddish gray (5 YR 4/2).
				2.0-5.0' Sand: Dark reddish gray (7.5 YR 4/2), fine to very fine, loose, fairly well
				sorted, trace medium grain, wet, odor.
130	135	5	0.90-1.55/	0-3.0' Sand: As above, with interbedded silt up to 1" thick, smooth, noncohesive
			13400-17100	and nonplastic, wet, odor.
				3.0-4.5' Silt: Reddish brown (5 YR 3/4), smooth, grainy, crumbly, wet, odor.
				4.5-4.9' Sand: Dark brown (7.5 YR 3/4), very fine to fine, some medium, loose,

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				vesicles, uniform somewhat cohesive to loose, trace black staining, saturated,
				strong odor.
80	85	5	-.54 - -.1/	0-5.0' Silt and Sand: As above, many vesicles, strong odor, saturated, uniform
			1331-14000	sample.
85	90	5	.31-2.54/	0-5.0' Silt: Brown (7.5 YR 5/4), as above, but slightly firmer, less very fine sand,
			478-31500	more toward grainy silt, some smooth, silt, slight grain size variations very minor,
				all the way from approximately 39.0', but overall uniform silt, loose to somewhat
				cohesive, wet to saturated, vesicles, strong odor.
90	95	5	.65-2.04/	0-5.0' Silt: As above, grainy to smooth, trace very fine sand in a few places, wet
			22500-59000	to moist, strong odor.
95	100	5	-.32-2.38/	0-5.0' Silt: As above, brown (7.5 YR 4/4), grainy to smooth, many vesicles, uniform,
			1009-8220	somewhat cohesive to loose, wet to saturated, strong odor.
100	105	5	-0.68-1.08/	0-5.0' Silt: As above, somewhat smoother 101.0-103.0, trace to little very fine
			1210-49100	sand 104.5 - 105.0, otherwise as above.
105	110	5	-.4-1.13/	0-1.5' Sand: Brown (7.5 YR 5/4), very fine to fine grain, predominately very fine,
			4500-121500	well sorted, loose, some silt, but most likely from core barrel, probably clean
				sand, saturated, strong odor, sharp contact with unit below.
				1.5-5.0' Silt: Brown (7.5 YR 4/4), smooth silt, somewhat sticky and cohesive,
				many vesicles, saturated, strong odor, trace very fine sand as above at very
				bottom of sample.
110	115	5	.25-1.07/	0-1.0' Silt: As above, but little very fine to fine sand mixed in matrix probably
			37100-79000	from unit below, strong odor, saturated.
				1.0-3.0' Sand: Brown (7.5 YR 4/3), very fine to fine grain, more fine grain than
				105.0-106.5, well sorted, loose, saturated, odor.
				3.0-5.0' Silt/Sand: Interbedded brown (7.5 YR 4/4), silt grainy to smooth, sand
				well sorted, very fine to fine, silt and sand layers appears approximately 3' thick,
				but hard to discern, distorted from drilling/intermixed, loose to crumbly,
				saturated, odor.
115	120		1.13-1.65/	0-5.0' Silt/Sand: Interbedded as above, sand very fine to fine, predominately sand
			1295-19500	interbeds up to 1.5' thick, separated by grainy smooth silt with vesicles, black
				staining silt interbeds up to 0.5' thick, separated by grainy to smooth silt with
				vesicles, black staining silt interbeds up to 0.5' thick, silt somewhat crumbly to
				somewhat cohesive, color is brown (7.5 YR 4/3), saturated, odor, trace fine
				gravel 4.5-5.0.
120	125	5	-.31- -94/	0-5.0' Silt/Sand: Interbedded as above, but predominately silt up to 3' thick, less
			4014-7801	sand.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
125	130	5	.2 - -38/	0-5.0' Silt/Sand: Interbeds as above, trace medium grain sand in 4.0-5.0.
			4117-47000	
130	135	5	.26-.54/	0-5.0' Sand: Brown (7.5 YR 5/3), very fine to fine grain, well sorted, somewhat
			7000-91700	loose, saturated, odor.
135	140	5	5.26-10.59/	0-2.5' Silty Sand: Brown (7.5 YR 4/4), sand is very fine to fine grain, trace medium
			2710-139800	to coarse, silt, trace fine gravel, trace yellowish red (5 YR 4/6) clay vaving, moderately
				sorted, somewhat loose, saturated, odor.
				2.5-4.0' Sand: Brown (7.5 YR 4/3), fine grain, some silt in places, well sorted,
				somewhat loose, saturated, odor.
				4.0-4.2' Silt: Brown (7.5 YR 4/3), trace yellowish red clay varving, clay is plastic,
				silt is smooth somewhat cohesive, saturated, odor.
				4.2-5.0' Sand: Brown (7.5 YR 5/3), very fine grain approaches graining silt in
				places, trace subangular to subround gravel to 0.5", very well sorted, somewhat
				loose, saturated, odor.
140	145	5	8.65-12.68/	0-5.0' Sand: As above, brown (7.5 YR 5/3), very fine grain, trace fine, but with a
			14500-	few silt interbeds with smooth silt dark brown (7.5 YR 3/2), trace gravel angular to
			>151000	subround fine to 3", silt beds approximately 1-3" thick at 2.0 and 4.0, silt is
				cohesive, overall somewhat loose, saturated, odor.
145	150	5	9.91-12.06/	0-0.2' Sand: As above.
			4303-12900	0.2-0.7' Silt/Gravel/Sand: Brown (7.5 YR 4/3), trace clay in matrix, sand very fine
				to very coarse, gravel angular to subround up to 4", mostly bedrock pieces, silt
				smooth, very poorly sorted mixture, loose to somewhat cohesive, saturated,
				odor.
				0.7-5.0' Interbedded Silt and Clay: Predominately silt, silty is brown (7.5 YR 4/3),
				clay yellowish red (5 YR 4/2), clay varved to approximately 1" thick layers, mostly
				varved, intermixed, disturbed from drilling, little gravel angular to subround up
				to 3.5" but mostly fine gravel in matrix, sandy with very fine sand in places,
				especially 3.0-4.5, clay is plastic and cohesive with fissile appearance, overall
				somewhat cohesive to somewhat crumbly, moist to wet, odor.
150	155	5	16.49-12.99/	0-4.5' Sand: brown (7.5 YR 5/3), very fine to fine grain, some silt interbeds
			13100-91500	approximately 1" thick with smooth silt throughout, also silt clay interbeds 2"
				thick at 2.5, trace very fine to very coarse and in silty/clay, trace clay varving with
				yellowish red clay as above, sand is well sorted, loose, saturated, odor.
				4.5-5.0' Clay: Reddish brown (5 YR 4/4), with some fine silt laminations, hard,
				firm, HP >4.0, plastic when worked, trace very fine sand fine layers, platy
				appearance on broken surface, cohesive, moist, odor.
				EOB @ 155'.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5.0	0.65-1.56/	0-0.5' Asphalt Pavement: Black, crushed asphalt and hematite road base.
			0.22-4.16	0.5-5.0' Silt: Dark yellowish brown (10 YR 4/6), grainy to smooth, some gravel
				subangular to subround up to 2" little to some sand in places, very fine to fine, 2"
				thick cohesive silt layer at 2.5 with black laminations, layer could be compacted
				from drilling, overall loose, damp, no odor.
5	10	5	4.39-8.26/	0-3.0' Sand: Strong brown (7.5 YR 5/8), very fine to very coarse grain, little silt,
			1.91-6.85	very poorly sorted, little gravel subangular to subround up to 3" but mostly
				fine, loose, damp, no odor.
				3.0-5.0' Sand: Strong born (7.5 YR 5/6), fine grain, trace very fine, trace medium to
				coarse, little gravel subangular to subround up to 3" as above, but predominately
				fine gravel, moderately well sorted, loose, damp, no odor.
10	12.5	2.5	7.6-115/	0-0.2' Sand: As above.
			3.01-12.95	0.2-1.5' Clayey Silt: Strong brown (7.5 YR 4/6), little to some sand, medium to very
				coarse suspended in matrix (fabric), possibly was interbedded clay varves and silt,
				but also clay in matrix, massive cohesive, somewhat plastic, soft, moist, little fine
				gravel also suspended in matrix, no odor.
				1.5-2.5' Clayey Silt: As above, but broken up and intermixed with angular, broken
				pieces of hard, dense rock, probably bedrock, rock pieces are coated in white
				powdery layer, black (10 YR 4/1) when washed, very hard drilling, crumbly and
				loose overall, dry to damp, no odor.
12.5	15	2.5	10.27-38.5/	0-2.5' Bedrock. Pulvsized, powdery rock with some large pieces, broken from
			24-78	drilling, hard drilling, rock is black (10 YR 4/1), very hard, dense, massive, appears
				to have a near vertical foliation pattern, but not obvious.
15	25	10	--	0-10.0' Bedrock core as above, a few white veins, foliation is vertical relative to
				hole.

0	5	5	3.41-4.43/	0-0.5' Grass and weeds.
			1.7-6.93	0.5-1.0' Sand and Silt: Light brown (7.5 YR 6/4), sand very fine to very coarse,
				trace fine gravel, powdery, poorly sorted, trace organics, loose, dry, no odor, fill.
				1.0-1.5' Silt: Brown (7.5 YR 5/4), many rootlets, organics, little very fine to fine sand,
				loose, powdery, dry, wood chips/pieces, no odor, fill.
				1.5-2.0' Wood chips, sticks, organics, compost, fill.
				2.0-5.0' Silt: As above brown (10 YR 4/3), but moist, also some wood chips, plastic,
				sheeting, fill.
5	10	5	4.72-7.05/	0-5.0' Fill Material, compost, black (10 YR 2/1), wood pieces, sand, gravel, silt mixed
			17-46	in, nails, garbage, moist to wet, organic odor.
10	15	5	1.25-4.75/	0-5.0' Silt/Clay Interbeds: Silt brown (7.5 YR 4/4), clay yellow red (5 YR 4/6),
			1.35-16.79	predominately smooth silt with regular clay interbeds varved to 1" thick, clay is
				plastic, somewhat stiff, HP = 2.5, fissile/platy appearance on broken surfaces,
				cohesive, black coloring on some laminae (not staining), silt somewhat cohesive
				and firm, somewhat crumbly when worked, overall moist, no odor.
15	20	5	9.22-20.26/	0-5.0' Silt with Clay Interbeds: As above, brown (7.5 YR 4/4), but also contains little
			37-138	sand very fine to very coarse, and trace fine subangular to subround gravel in silt
				matrix, highly distrubed from drilling, soft, clay is varved to 0.5", crumbly and
				somewhat smooth plastic, loose, moist, could be silt/clay interbeds as above,
				other constituents could be drilling phenomena, but appear to be real.
20	25	5	32.5-463/	0-4.0' Silt/Clay Interbed: As above in 10-15' with clay beds varved to 1" thick,
			3-51	much more clay content than above, still predominately silt, but many clay beds,
				moist, no odor.
				4.0-5.0' Sand: Brown (7.5 YR 5/4), fine grain, trace medium, very well sorted,
				uniform, loose, moist, no odor.
25	30	5	3.86-8.40/	0-5.0' Sand: Brown (7.5 YR 5/4), fine grain, trace medium, very well sorted,
			2.73-9.35	uniform, loose, damp, or odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
30	35	5	4.93-17.30/	0-1.5' Sand: Strong brown (7.5 YR 4/6), fine to coarse grain, predominately fine,
			6.31-45.93	little subround gravel up to 1.5", moderately sorted, loose, moist (drilling fluid),
				no odor.
				1.5-2.0' Sand: As above, but fine to medium grain, trace coarse, trace fine gravel,
				loose, damp to moist, no odor.
				2.0-3.0' Silt and Sand: Yellowish brown (10 YR 5/4), sand very fine to coarse,
				predominately very fine to fine, very silty, little fine gravel subangular to
				subround, loose, powdery, damp, no odor.
				2.0-5.0' Sand: As above in 25-30',fine grain, very well sorted and uniform, loose,
				damp, no odor.
35	40	5	0-9.77/	0-3.0' Different types of sand as seen in above units, intermixed, slough.
			24-69	3.0-5.0' Sand: Yellowish brown (10 YR 5/4), very fine to very coarse, predominately
				fine to medium, trace silt, trace subangular to subround gravel up to 0.5", very
				poorly sorted, loose, moist, no odor.
40	45	5	-0.46-5.33/	0-3.0' Sand: As above, very poorly sorted, all sizes, predominately fine to medium,
			7-47	trace silt, moist, no odor.
				3.0-3.5' Sandy Silt: Dark yellowish brown (10 YR 4/4), sand very fine to very
				coarse, predominately very fine, little angular to subround gravel, poorly sorted,
				very silt, loose, powdery, some silt cemented in nodules, like hardpan, dry, no
				odor.
				3.5-4.0' Silt: Pale brown (10 YR 6/3), some sand very fine to very coarse, little
				gravel angular to subround up to 1.5", very loose, dusty/powdery, dry, no odor.
				4.0-5.0' Silty Sand: Dark yellowish brown (10 YR 4/4), very fine grain, little fine
				to coarse, trace angular to subround gravel up to 1", loose, powdery, damp,
				no odor.
45	50	5	0.21-0.41/	0-2.5' Sand: Dark yellowish brown (10 YR 4/4), fine grain, very well sorted, loose,
			1.85-2.83	moist, no odor.
				2.5-5.0' Sand: Very fine to fine grain, trace medium to coarse, trace gravel,
				subround up to 1", moderate to well sorted, loose, moist could be bad sample, core
				barrel moved up and down a lot.
50	55	5	1.20-3.23/	0-2.5' Slough: Intermixed sands and silt, extremely distorted from drilling.
			10-57	2.5-3.5' Silty Sand: Dark yellowish brown (10 YR 4/4), sand predominately very
				fine to fine, little medium to coarse, trace to little gravel subround up to 1", poorly
				sorted, loose, moist to wet, no odor, could be slough.
				3.5-4.0' Sand: Dark brown (10 YR 3/3), coarse grain, some fine to medium,
				moderately well sorted, trace fine subround gravel, many bright orange coarse
				sand grains, loose, saturated, no odor.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				4.0-5.0' Silt Sand: As above, could be slough, looks very disturbed.
55	60	5	0.20-2.21/	0-0.5 Sand: As above in 53.5-54.0, predominately coarse grain, saturated, no odor.
			2.31-33.94	0.5-1.5' Sand: Dark brown (7.5 YR 3/3), fine coarse grain, predominately medium,
				poorly to moderately sorted, trace fine gravel subround, little silt but could be
				washed in from above, loose, saturated, no odor.
				1.5-5.0' Sand: Brown (7.5 YR 5/3), fine grain, trace to little medium to coarse,
				moderately to well sorted, trace fine subround gravel, little silt, but could be
				washed in from above, loose, saturated, no odor.
60	65	5	0.12-1.47/	0-0.5' Sand: As above, but slightly coarse, predominately fine to medium.
			2.14-16.58	0.5-2.0' Sand/Silt: Brown (7.5 YR 5/4), very fine sand to very grainy silt size, well
				sorted, uniform, loose, saturated, no odor.
				2.0-3.0' Silt: Brown (7.5 YR 4/4), grainy, approaching very fine sand size but
				somewhat finer than above, trace black staining, uniform, sharp contact with
				unit above, somewhat soft, somewhat loose, saturated, no odor.
				3.0-5.0' Sand: Brown (7.5 YR 5/4), very fine to fine grain, very well sorted, uniform,
				loose, saturated, no odor.
65	70	5	-2.22- -0.13/	0-4.0' Sand: As above, very fine to fine grain, saturated, no odor.
			0.66-14.67	4.0-5.0 Sand/Silt: Brown (7.5 YR 4/4), very very fine sand to very grainy silt, trace
				greenish and yellowish banding/staining in places, trace black staining, uniform,
				saturated, slight odor?
70	75	5	-0.43-1.95/	0-1.0' Sand/Silt: Brown (7.5 YR 5/4), very very fine sand, approaching grainy silt
			8.08-22.11	in size, heavy black staining, uniform, somewhat loose, saturated, no odor.
				1.0-2.5' Sand/Silt: As above, no staining.
				2.5-2.8' Silt: Brown (7.5 YR 4/4), smooth, somewhat cohesive and firm, crumbly
				when worked, uniform, moist to wet, no odor.
				2.8-5.0' Sand/Silt: As above, nodule black staining, saturated, slight odor.
75	80	5	-3.82- -2.22/	0-3.0' Silt: Brown (7.5 YR 4/3), very grainy, completely disturbed, liquefied from
			1.17-11.14	drilling, trace clay in matrix?, heavy black staining in places, vesicles, saturated,
				moderate odor.
				3.0-5.0' Silt: Brown (7.5 YR 4/4), smooth, trace clay in matrix, trace clay varving/
				layering, one visible clay layer at 3.5 approximately 0.25" thick, yellowish red,
				platy, plastic as above, disturbed, saturated, somewhat cohesive, moderate odor.
80	85	5	0.1-1.49/	0-2.0' Silt: As above, with trace clay layering, but disturbed as above, some black
			2.31-8.08	staining, slightly coarser in places, somewhat cohesive, somewhat loose, and
				crumbly, saturated, odor especially where grainy.
				2.0-5.0' Silt: Brown (7.5 YR 4/4), grainy to smooth, predominately smooth, grainy
				4.0-5.0, black staining, crumbly, loose, saturated, odor, strong odor

				where grainy.
85	90	5	0.93- -.06/	0-5.0' Sand/Silt: Brown (7.5 YR 4/4), grainy silt, approaching very fine sand in
			72-1021	places, trace black staining, methane bubbles in water, vesicles, saturated,
				disturbed, odor.
90	95	5	-1.0- -0.26/	0-5.0' Silt: As above, but grainy to smooth in places, black staining, wet to
			348-1547	saturated, somewhat cohesive where smooth, otherwise loose, odor.
95	100	5	-1.15- -0.47/	0-5.0' Silt: Brown (7.5 YR 4/4), grainy, uniform, trace black staining, bubbles,
			711-1543	vesicles, saturated, somewhat cohesive to loose, odor.
100	105	5	-1.45 - -0.27/	0-5.0' Silt: Brown (7.5 YR 4/3), smooth, trace to little clay in matrix, trace clay
			374-1795	layers 0-1.5', clay plastic, yellowish red (5 YR 4/6), platy appearance, cohesive, silt
				somewhat cohesive and plastic, pasty texture, trace black staining, somewhat firm,
				wet to saturated, odor.
105	110	5	2.24- -1.83/	0-5.0' Silt: Brown (7.5 YR 3/4), as above, smooth, trace little clay in matrix, could
			405-2515	have been varved, uniform, somewhat cohesive, trace black staining, vesicles, wet
				to saturated, odor.
110	115	5	-3.07- -1.0/	0-5.0' Silt: Strong brown (7.5 YR 4/6), clayey 0-2.0 in matrix, clay grades out below
			96-2504	2.0', heavy black staining 0-2.0', trace black staining below 2.0', very smooth silt
				throughout, somewhat cohesive, uniform, trace vesicles, odor.
115	120	5	-4.44- -4.17/	0-5.0' Clayey silt: Reddish brown (5 YR 5/4), very smooth silt, probably varved to
			1900-16500	interbedded with clay, but layers not discernable trace to little clay in matrix,
				dark grayish brown (10 YR 4/2) areas, probably staining, disturbed, many
				vesicles, moderately plastic, soft, wet to saturated, approximately 2" thick very
				fine sand layer at bottom, brown (10 YR 5/3), sand is well sorted and uniform and
				contains many vesicles, strong odor.
120	125	5	-27- -0.47/	0-2.0' Silt: As above with trace grainy silt/very very fine sand pockets/layers.
			170000-	2.0-3.0' Silt: Reddish brown (5 YR 5/4), very grainy, soft, crumbly, uniform, black
			220000	staining, loose, wet, strong odor.
125	130	5	-4.56- -3.47/	0-5.0' Silt: Dark brown (7.5 YR 3/2), very grainy, approaches very fine sand size,
			1500-12500	2" thick very fine sand seam, well sorted at 2.0', sand is very dark brown (7.5 YR
				2.5/3), stained black, heavy black staining throughout, bubbles, vesicles, some-
				what loose, saturated, disturbed, strong odor.
130	135	5	-1.84-8.2/	0-1.0' Silt with some Clay: Silt, brown (10 YR 4/3), clay yellowish red (5 YR 4/6),
			7800-70000	predominately grainy silt matrix, clay layers varved to approximately 0.5",
				disturbed, clay plastic, cohesive, black staining, somewhat cohesive silt to loose,
				saturated, odor.
				1.0-5.0' Interbedded Silt and Sand: Silt, dark grayish brown (10 YR 4/2), sand,
				dark yellowish brown (10 YR 4/4), predominately very very fine sand/borderline

Sample/Core Log (continued)

Boring/Well: GMSB-135

Prepared by: Andy Mumpy/Toni Schoen

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				2.5-5.0' Silt with Sand and Gravel: Dark grayish brown (10 YR 4/2), predominately silt matrix with much sand and gravel suspended in matrix, trace clay, gravel predominately fine, some subangular to subround up to 1", sand very fine to very coarse, poorly sorted, somewhat cohesive to cohesive and firm, cemented, moist, appears to be till, slight odor.
265	270	5	0-0.47/ 509-1752	0-3.0' Sand and Gravel: Color as above, sand very fine to very coarse, predominately coarse to very coarse, gravel predominately fine, pea gravel, some up to 3" subangular to subround, silty, very poorly sorted, loose, saturated, odor. 3.0-5.0' Sand and Gravel: As above, but sand is fine overall, sand predominately fine grain, still silty, much gravel/fine to 1" subangular to subround, poorly, sorted, loose, saturated, odor.
270	275	5	0-0.11/ 150-580	0-2.5' Sand and Gravel: As above, silty, a few cobbles of subround bedrock up to 5", sand very fine to very coarse predominately fine, loose, saturated, slight odor. 2.5-5.0' Silt with Sand and Gravel: Brown (7.5 YR 4/4), as above in 262.5-265.0', predominately silt matrix with much sand and gravel suspended in matrix, stiff, cohesive, trace to little clay in matrix, gravel angular to subround up to 3", sand all sizes, wet to saturated, slight odor.
275	280	0		No recovery.
280	285	0		No recovery.
285	290	0		No recovery.
290	292	2	0.18-1.13/ 245-854	0-1.5' Silt with Sand and Gravel: As above, till. 1.5-2.0' Weathered Bedrock: Greenish gray (1 Gley 5/1GY) hard, crumbly, somewhat cohesive, uniform grain size, trace rock fragments, dry to moist, slight odor. EOB @ 292 ft.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
0	5	5	27.93-472/	0-1.0' Silt: Dark yellow brown (10 YR 3/4), grainy to smooth, trace very fine sand,
			12-32	top soil, rootlets, organics, moist, loose, organic odor.
				1.0-2.0' Silty Sand: Strong brown (7.5 YR 5/6), sand very very fine, trace fine
				gravel subangular to subround up to approximately 1", well sorted sand, loose,
				moist, organic odor.
				2.0-4.0' Sand: Strong brown (7.5 YR 5/8), predominately very fine to fine grain,
				trace medium to coarse, trace gravel, predominately fine subround, a few up to
				2", well sorted, loose, moist, organic odor.
				4.0-5.0' Sand: Brown (7.5 YR 5/4), some gravel subangular, subround up to 1.5",
				predominately fine grain, trace medium to coarse, some silt, moderately well
				sorted sand, loose, moist, no odor.
5	10	5	7.53-11.76/	0-0.5' Sand: As above.
			2.15-6.84	0.5-2.5' Sand: Strong brown (7.5 YR 5/6), fine to medium grain, trace to coarse,
				trace gravel angular to subround up to 0.4", predominately fine gravel, well
				sorted, loose, moist, no odor.
				2.5-5.0' Sand: Brown (7.5 YR 4/4), fine grain, trace medium to coarse, trace fine
				gravel subangular to subround up to 1", moderately well sorted, loose, moist,
				no odor.
10	15	2	17.97-3021/	0-2.0' Sand: As above.
			5.04-9.53	
15	20	5	0.86-2.56/	0-1.0' Sand/Silt: Strong brown (7.5 YR 4/6), sand very very fine and well sorted,
			0.72-1.4	silty, borderline very very fine sand/very grainy silt, uniform, loose, moist, no odor,
				slough?
				1.0-5.0' Silt/Clay Interbeds: Silt brown (7.5 YR 4/4), clay yellow red (5 YR 4/6),
				predominately clay 1.0-2.0', predominately silt below 2.0', clay interbeds varved to
				approximately 3" thick, silt, smooth, clay plastic, stiff, HP = 3.0, has fissile
				appearance when broken, silt uniform, overall cohesive, firm, moist, no odor.

Sample/Core Log (continued)

Boring/Well GMSB-136

Prepared by Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
20	25	5	2.16-3.69/	5.0' Silt/Clay: Interbeds as above, but less clay content, regular clay layers
			4.03-15.28	approximately every foot, about 0.5" thick, silt predominately smooth to somewhat
				grainy, silt has slightly different color: Dark yellowish brown (10 YR 4/4), firm,
				somewhat crumbly in places, trace black staining?, no odor.
25	30	5	1.70- -0.87/	0-5.0' Silt with Clay Interbed: As above, with slightly less clay content, layers are
			0	less frequent, silt somewhat grainier in places than above, overall the same as
				above.
30	35	5	-2.43- -1.47/	0-5.0' Silt: With a few clay layers as above, smooth silt, clay 0.5" - 1.5" thick.
			0.26-0.90	
35	40	5	2.5-0.03/	0-5.0' Silt/Clay Interbed: As above redescribed here: silt brown (10 YR 4/3), clay
			22-0.50	yellow red (5 YR 4/6), predominately smooth silt with regular clay interbeds 0.5"-
				3" thick occurring approximately every 0.5-1.0 feet, but varies somewhat, with
				depth, clay stiff, HP = 4.0, cohesive plastic, has fissle/platy appearance on broken
				surface, disturbed from drilling, overall somewhat cohesive to cohesive, moist,
				wet, no odor, bubbles in liquefied area.
40	45	5	-0.25 - -6.65/	0-5.0' Silt/Clay: Interbeds as above, slightly less clay varved to approximately 1.5"
			0.26-1.39	thick layers, moist, no odor.
45	50	5	-1.92- -0.81/	0-2.5' Silt/Clay Interbeds: As above, clay layers varved to approxiamtely 1" thick,
			1.3-28	predominately silt, moist, cohesive, form, no odor.
				2.5-5.0' Sand: Strong brown (7.5 YR 4/6), very fine grain, trace medium to coarse,
				well sorted, loose, moist, no odor.
50	55	5	-0.41-2.01/	0-4.0' Sand: Strong brown (7.5 YR 5/4), fine grain, trace medium to very coarse,
			0.6-2.11	4" thick clayey silt layer at 2.0' slough? Dark brown (7.5 YR 3/3), cohesive, soft,
				uniform, sand well sorted, loose, damp to moist, no odor.
				4.0-5.0' Sand: Strong brown (7.5 YR 5/4), fine grain, very well sorted, loose, damp,
				uniform, no odor.
55	60	5	0.27-0.8/	0-5.0' Sand: Brown (7.5 YR 3/4), water table at 55 feet, fine grain, trace medium
			8.26-361	to coarse as above, loose, well sorted, saturated, odor, grades into unit below.
60	65	5	0.10-0.56/	0-2.0' Sand: Strong brown (7.5 YR 4/6), some to much gravel subangular to
			5400-10300	subround up to 0.5", sand fine to very coarse, predominately medium coarse,
				little silty, loose, poorly sorted, saturated odor, grades into unit below.
				2.0-5.0' Sand: Brown (7.5 YR 4/2), fine to medium grain, little coarse, trace gravel
				angular to subround up to 1", moderate to well sorted, loose, saturated, odor.
65	70	5	-0.6-1.2/	0-5.0' Sand: Brown (7.5 YR 5/4), fine grain, little medium to coarse, moderate to
			8011-13800	well sorted, loose, uniform, saturated, odor.
70	75	5	0.31-1.45/	0-3.0' Sand: Brown (7.5 YR 5/4), fine to very coarse, predominately fine, trace
			5863-22400	subangular to subround gravel up to 2", moderately sorted, loose, saturated, odor.

Sample/Core Log (continued)

Boring/Well GMSB-136

Prepared by Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
				3.0-5.0' Sand: Brown (7.5 YR 5/3), very fine to fine grain, predominately fine,
				trace medium to coarse, well sorted, loose, saturated, odor.
75	80	5	-2.31- -0.75/	0-1.5' Sand: Brwon(7.5 YR 5/4), fine grain, some very fine, well sorted, uniform,
			374-4168	loose, saturated, odor.
				1.5-2.0' Sand: Color as above, fine to medium grain, some coarse coarsening
				decrease down section, grading into coarser from unit above, moderately sorted,
				loose, saturated, odor
				2.0-5.0' Sand: Reddish brown (5 YR 5.4), very fine grain, some fine grain, trace
				gravel subround, fine up to approximately 1", well sorted, loose, saturated,
				odor.
80	85	5	-1.94- -0.13/	0-5.0' Sand: Color as above, very fine grain, slightly finer than above, well sorted,
			2120-5989	loose, saturated, odor.
85	90	5	-6.14-7.65/	0-3.0' Sand: As above, very fine grain, almost silt size.
			5950-13500	3.0-4.0' Silt: Reddish gray (5 YR 5/2), smooth, uniform, crumbly when worked,
				trace black staining, vesicles, loose, saturated, strong odor.
				4.0-5.0' Sand/Silt: Reddish brown (5 YR 5/3), very very fine sand, borderline silt
				size grain, well sorted, uniform, loose, saturated, odor.
90	95	5	7.09-12.61/	0-5.0' Sand/Silt: Color as above interbedded, sand very fine, interbeds,
			11100-27800	approximately.
				0.5-1", silt smooth, trace to little black staining, disturbed, loose, saturated, odor.
95	100	5	-1.61-17.84/	0-2.5' Silty Sand: Reddish brown (5 YR 5/3), very fine grain, very silty, probably
			450-18000	was interbedded, very fine sand/silt, somewhat loose, saturated, bubbles/vesicles,
				trace, black staining, strong odor.
				2.5-3.5' Silt: Interbedded silts, one is smooth, reddish brown (5 YR 5/3) other is
				clayey, gray (5 YR 6/1), layers appear varved to approximately 0.5", clayey silt is
				somewhat plastic, cohesive, saturated, vesicles, strong odor.
				3.5-5.0' Sand/Silt: Reddish brown (5 YR 5/4), very fine grain silty sand grading
				decrease down section to sandy silt, somewhat loose, saturated, trace black
				staining, strong odor.
100	105	5	0.54-20.77/	0-5.0' Silt/Clay Interbed: Silt reddish brown (5YR 5/4) clay, yellowish red (5 YR
			1690-10500	4/6) predominately silt matrix with some clay layers varved to 0.5" thick, clay is
				plastic, cohesive with fissile/platy appearance, heave black staining below 1.5,
				saturated, vesicles, some clay layers, stained black, very strong odor.
105	110	5	-1.34-0.45/	0-5.0' Sand/Silt: Reddish brown (5 YR 4/4), very fine sand, silty, borderline fine
			5800-11000	sand/silt size grain, uniform, trace black staining, somewhat loose, saturated,
				strong odor.
110	115	5	-0.71-1.65/	0-3.0' Sand/Silt: As above, but fine grain, slightly, grainy silt at 3.0, black staining,

Boring/Well GMSB-136

Prepared by Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
			7800-21000	strong odor.
				3.0-5.0' Silt: Dark reddish brown (5 YR 3/3), smooth, trace clay layers as above,
				heavy black staining, somewhat cohesive, uniform crumbly when worked,
				saturated, vesicles, very strong odor.
115	120	5	0.44-2.84/	0-5.0' Silt: Dark reddish brown (5 YR 2.5/2), very grainy, uniform, heavy black
			2945-11000	staining, saturated, almost very fine sand, very strong odor.
120	125	5	1.41-2.46/	0-2.0' Silt: As above, with slightly less staining, color is dark reddish brown (5 YR
			3153-15000	3/3), and some layers of smooth clayey silt, disturbed, somewhat loose, very
				strong odor.
				2.0-5.0' Silt: Brown (7.5 YR 4/4), smooth, uniform, little black staining, saturated,
				somewhat cohesive, very strong odor.
125	130	1.5	-0.41-0.3/	0-1.5' Clayey Silt: Reddish brown (5 YR 4/4), smooth, sticky, somewhat plastic,
			1016-2534	uniform, cohesive, saturated, very strong odor.
130	135	0	--	No recovery.
135	140	4	1.94-2.54/	0-5.0' Silt: Brown (7.5 YR 5/3), smooth, clayey in places, a few clay layers as
			1943-2515	above, yellowish red, plastic, 1/4" thick, uniform, somewhat firm and cohesive,
				trace black staining, uniform trace vesicles, very strong odor.
140	145	5	0-0.91/	0-5.0' Silt: As above.
			370-1995	
145	150	5	-0.83- -0.1/	0-2.0' Silt: As above.
			6677-17500	2.0-5.0' Sand/Silt: Interbedded very fine sand and grainy silt layers approximately
				3-6" thick, silt, brown (7.5 YR 4/3), sand, brown (7.5 YR 5/3), black staining in
				sand layers, sand well sorted, very fine, loose, silt somewhat cohesive, saturated,
				vesicles, strong odor.
150	155	5	6.54-0.07/	0-5.0' Interbedded sand/silt, as above.
			15000-39600	
155	160	3	-1.12-1.42/	0-3.0' Sand: Dark brown (7.5 YR 3/2), very fine to fine grain, some silt in places
			167-6402	probably washed in from above, well sorted, loose, saturated, strong odor.
160	165	5	-0.16-4.01/	0-5.0' Sand: Brown (7.5 YR 5/3), very fine, very silty in places, were probably silt
			11000-18300	layers approximately 1.0" thick interbedded, sand well sorted, uniform, loose,
				vesicles, strong odor.
165	170	5	-0.57-0.57/	0-5.0' Silt and Sand: Interbedded silt and sand as above, silt grainy to smooth, silt
			1843-5422	layers appear approximately 2" thick, predominately very fine sand, well sorted,
				a few sand beds contain fine grain with some medium grain sand, loose, silt is
				somewhat cohesive, saturated, strong odor.
170	175	5	0.33-1.12/	0-1.0' Sand: Dark gray (7.5 YR 4/1), fine to medium grain, some coarse,

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
			12300-22200	moderately sorted, loose, saturated, odor.
				1.0-5.0' Sand: Dark gray (7.5 YR 4/1), sand very fine to very coarse,
				predominately fine, poorly sorted, some gravel subangular to subround and fine,
				trace up to 1", silty in places (from drilling?) loose, saturated, odor.
175	180	5	0.14-0.78/	0-2.5' Sand: Dark grayish brown (10 HR 4/2), very fine to fine grain, trace medium
			916-13000	to coarse, some silt (washed in?), well sorted, loose, saturated, odor.
				2.5-4.0' Sand: Very dark gray (5 YR 3/1), fine to very coarse, predominately
				medium, some silt (washed in?), poorly sorted, loose, saturated, odor.
				4.0-5.0' Silt with Sand: Reddish brown (5 YR 4/4), smooth silt with sand pocket/
				lens approximately 3"thick, disturbed, sand is very fine to coarse, poorly sorted,
				loose, saturated, strong odor, vesicles.
180	185	5	-0.12-1.07/	0-4.0' Silt: Color as above smooth, uniform, somewhat cohesive and firming,
			2847-10300	saturated, 3" thick sand seam and 2.0', dark reddish gray (5 YR 5/2), sand is fine
				grain, uniform well sorted, loose, saturated, strong odor.
				4.0-5.0' Sand: Brown (10 YR 4/3), very fine grain, fine grain 4.0-4.2, well sorted,
				loose, saturated, odor.
185	190	5	0.14-1.36/	0-0.5' Sand: As above.
			2300-5600	0.5-2.0' Sand: As above, with interbedded silt layers 3 to 6" thick, sand is
				somewhat coarser than above, predominately fine grain, color brown (10 YR 4/3).
				2.0-5.0' Sand and Silt Interbedded: Sand brown (10 YR 4/3), silt reddish brown
				(5 YR 4/4), beds are thick (approximately 1 to 2'), sand is very fine grain, well
				sorted, uniform, saturated, odor, silt is somewhat grainy, uniform, saturated.
190	195	5	0-0.78/	0-5.0' Sand and Silt: Interbedded as above.
			2100-4600	
195	200	5	0.12-1.28/	0-5.0' Sand/Silt: reddish brown (5 YR 4/4), very very fine sand/borderline grainy
			638-5200	silt, somewhat uniform, trace black staining?, somewhat cohesive, somewhat
				loose, saturated, bubbles in liquefied areas, odor.
200	205	5	0.90-2.39/	0-5.0' Sand/Silt: As above.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	FID/PID (ppm)	Sample/Core Description
0	5	2	68.2-78.4/	0-2.0' Sandy Silt: Dark yellowish brown (10 YR 3/4), fine sand, organic, wood,
			10.36-15.31	trace subrounded gravel, somewhat loose, low cohesion, poorly sorted, moist.
5	10	2	3.91-23.2/	0-2.0' Silt/Clay: Silt, brown (&.5 YR 5/4), clay yellowish red (5 YR 4/6),
			0.55-5.91	interbedded, clay varves to 1 inch (varved in last foot), silt is 1 to 2 inches, fissily
				surface, somewhat crumbly, smooth silt, clay is platy and plastic, fine sand layer
				(iron stained) from 0.5-0.75 feet.
10	15	5	2.53-73.2/	0-1.0' Silt: Brown (7.5 YR 4/3), soft to medium stiff, clayey (likely clay varving
			0-1.6	destroyed during drilling), fissily surface, smooth, uniform, somewhat crumbly,
				medium plasticity, saturated.
				1.0-5.0' Silt/Clay: silt brown (7.5 YR 4/3), clay yellowish red (5 YR 4/6),
				interbedded, clay is varved to 1 inch, silt to 0.25 to 2 inches, thicker clay and silt
				layers from 1 to 3 feet, silt is crumbly and smooth, fissily surface, clay is platey
				and plastic, voids are silt and smooth surfaced, several scattered fine sand
				pockets.
15	20	5	209-2310/	0-5.0' Silt/Clay: Silt, brown (7.5 YR 4/3), clay strong brown (7.5 YR 4/6),
			0-1.69	interbedded, clay is varved, silt is 0.5-4 inches, smooth and soft silt, medium
				plastic silt, fissily surface, platy clay, fairly uniform beds, black staining, saturated.
20	25	5	1330-15900/	0-1.0' Silt/Sand/Gravel: Reddish brown (5 YR 4/3), fine sand, smooth silt, medium
			0-1.83	to coarse subrounded gravel, very poorly sorted, low cohesion to loose, saturated.
				1.0-2.0' Sand: Reddish brown (5 YR 5/3), fine to medium sand, mostly medium
				sand, trace coarse sand, trace gravel up to 1 inch, loose, moderately sorted,
				saturated.
				2.0-3.0' Sand: Brown (7.5 YR 4/3), medium to coarse sand, mostly medium
				sand, little medium to coarse subrounded gravel up to 2 inches, loose, poorly
				sorted, saturated.
				3.0-5.0' Sand: Brown (7.5 YR 4/3), fine to coarse sand, mostly medium sand, trace
				trace medium subrounded gravel, loose, well sorted, saturated.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	FID/PID (ppm)	Sample/Core Description
25	30	5	3715-9530/	0-4.0' Sand: Same as above, with less fine sand.
			0-1.32	4.0-5.0' Sand: Brown (7.5 YR 5/2), fine to coarse sand, mostly fine sand, loose,
				well sorted, saturated.
30	35	5	3560-5180/	0-4.0' Sand: Brown (7.5 YR 5/3), fine to medium sand, mostly fine sand, loose,
			0-0.52	well sorted, strong odor, saturated.
				4.0-5.0' Sand: Brown (7.5 YR 5/2), fine to coarse sand, mostly medium sand, loose,
				well sorted, strong odor, saturated.
35	40	5	970-3710/	0-5.0' Silt: Strong brown (7.5 YR 4/6), grainy, uniform, very soft to somewhat
			0-3.59	crumbly, methane vesicles on core sides, strong odor, saturated.
40	45	5	2620-9630/	0-5.0' Silt: Same as above.
			3.33-8.07	
45	50	5	1799-11800/	0-2.5' Silt: Same as above.
			9.07-14.31	2.5-5.0' Silt: Brown (7.5 YR 4/6), interbedded, smooth and grainy silt, fissily, 0.25
				inch smooth silt layers, methane vesicles, strong odor, saturated.
50	55	5	--	0-5.0' Silt: Reddish brown (5 YR 5/4), smooth to grainy, loose to crumbly (grainy
				to smooth), uniform, strong odor, saturated.
55	60	6	702-3510/	0-5.0' Silt: Reddish brown (5 YR 4/4), grainy, low cohesion, slightly plastic in spots
			5.0-7.2	(clayey), uniform, methane vesicles, strong odor, saturated.
60	65	5	1559-3780/	0-5.0' Silt: Reddish brown (5 YR 4/4), smooth and grainy, smooth fissile surface,
			3.2-6.7	slightly plastic, from 0-2.5 (clayey-likely varved clay destroyed during drilling),
				uniform, strong odor, saturated.
65	70	5	10000-	0-5.0' Silt: Reddish brown (5 YR 4/4), grainy, trace clay varves in top foot, uniform,
			101000/	trace black staining, crumbly in bag, loose crumbles, strong odor, saturated.
			2.8-9.5	
70	75	5	10000-	0-1.0' Silt: Same as above.
			38000/	1.0-3.0' Silt: Grainy is reddish brown (5 YR 5/4), smooth is reddish gray (5 YR 4/2),
			-1.18-2.1	interbedded, 0.25-1 inch smooth layers, platy in sections of the bag, crumbly when
				worked, strong odor, saturated.
				3.0-5.0' Silt: Same as 65-70 feet.
75	80	--	--	No recovery. Pushed into formation.
80	85	--	--	No recovery. Pushed into formation.
85	90	--	--	No recovery. Pushed into formation.
90	95	--	--	No recovery. Pushed into formation.
95	100	5	831-9915/	0-5.0' Silt: Reddish brown (5 YR 4/1), smooth and grainy silt interbeds, likely
			-2.9-1.3	varved clay destroyed during drilling, 1-1.25 silt layer with fine subrounded gravel,
				very soft to soft, too plastic to crumble, strong odor, saturated.

Prepared by Toni Schoen/Jill Flater

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	FID/PID (ppm)	Sample/Core Description
100	105	5	1857-10300/	0-2.5' Silt: Same as above.
			-2.9-1.3	2.5-2.9' Sand: Brown (10 YR 4/3), very fine to fine sand, uniform, loose, strong
				odor, saturated.
				2.9-4.5' Silt: Reddish brown (5 YR 4/1), smooth to grainy beds, soft, strong odor,
				saturated, sharp contact with above sand -5 mm clay varve.
				4.5-5.0' Sand/Silt: Sand brown (7.5 YR 4/3), silt reddish brown (5 YR 4/4),
				interbedded, very fine sand seam less than 1-inch, trace fine subrounded gravel
				in sand seam, smooth to grainy silt (interbedded), trace black layer staining at
				base, strong odor, saturated.
105	110	5	5600-10200/	0-3.5' Sandy Silt: Brown (7.5 YR 4/2), very fine to fine sand, mostly very fine sand,
			-1.9-0.2	very silty, trace medium sand, uniform, no to low cohesion, liquefied in areas,
				methane vesicles, strong odor, saturated.
				3.5-4.5' Sand/Silt: Brown (7.5 YR 4/2), very fine to fine and, mostly fine sand,
				interbedded with smooth silt, 0.5 to 1 inch beds, well sorted sand, strong odor,
				saturated.
				4.5-5.0' Sand: Dark brown (7.5 YR 3/2), very fine to medium sand, mostly fine
				sand, some silt, loose, poorly sorted, strong odor saturated.
110	115	5	32000-	0-3.0' Sand: Brown (7.5YR 4/3), very fine to fine sand, mostly fine sand, some silt,
			45400/	beds (<0.5"), loose to soft, moderately sorted, strong odor, saturated.
			1.4-2.7	3.0-4.0' Sand: Reddish brown (5 YR 4/3), very fine sand, some silt, uniform, well
				sorted, strong odor, saturated.
				4.0-5.0' Silt: Reddish brown (5 YR 4/4), smooth, little clayey, plastic, possible clay
				varving destroyed during drilling, strong odor, saturated.
115	120	5	35000-	0-3.5' Silt: Reddish brown (5 YR 4/3), very grainy, borderline very fine sand, uniform,
			>100000/	methane vesicles, strong odor, saturated.
			-1.3-2.0	3.5-5.0' Sandy Silt: Reddish brown (5 YR 4/3), very fine sand, grainy silt, likely
				interbedded, well sorted, strong odor, saturated.
120	125	5	4007-35500/	0-1.0' Sandy Silt: Same as above.
			-1.7-0.7	1.0-1.5' Sand: Brown (7.5 YR 4/2), very fine to fine sand, silty, uniform, well sorted,
				strong odor, saturated.
				1.5-4.0' Sand: Brown (7.5 YR 4/2), very fine sand, very silty, trace fine sand, well
				sorted, strong odor, saturated.
				4.0-5.0' Silt/Sand: Silt reddish brown (5 YR 4/3), sand brown (7.5 YR 4/3),
				interbedded, very fine sand, silt 0.25-4 inches, sand 2-3 inches, grainy, silt,
				slightly plastic, well sorted, methane vesicles, strong odor, saturated.
				EOB @ 125 feet.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Time/Hydraulic Pressure or Blows per 6 inches	PID/FID (ppm)	Sample/Core Description
22	24	1.8	4 5 7 4	3.60/-1.15	0-0.6' Slough.
					0.6-1.8' Sand: As above.
24	26	0.6	4 3 5 4	5.16/-1.15	0-0.6' Sand: As above, but with more (some) gravel, also little silt and
					clay in matrix 0.3-0.6, strong brown (7.5 YR 5/8) where silt and clay
					is present, poorly sorted, moist, slight odor?
26	28	1.2	4 3 5 4	2.68/-1.56	0-0.9' Sand: As above, Redescribed dark yellowish brown (10 YR 3/6),
					trace to little silt and clay in places (in matrix), predominately fine
					grain, some medium to coarse, trace gravel subangular to subround
					up to 1", loose, moist, poorly sorted, no odor.
					0.9-1.2' Clay: Yellowish red (5 YR 4/6), uniform, plastic, somewhat
					soft, cohesive, HP = 2.0, moist, no odor.
28	30	1.8	3 2 4 4	2.91/-1.34	0-0.5' Slough.
					0.5-1.8' Clay with silt interbeds: Clay as above, has platy appearance
					on broken surface, color as above, clay layers up to 4" thick,
					predominately clay a few silt layers up to approximately 0.7" thick,
					silt is brown (7.5 YR 4/4), smooth, one sand seam approximately 0.3"
					thick at 1.2', sand is fine to medium grain, well sorted, overall
					cohesive, damp to moist, no odor.
30	32	2.0	5 4 6 4	2.97/-1.4	0-0.6' Slough.
					0.6-1.6' Silt/Clay: Interbeds, as above, but much more silt,
					predominately silt with silt layers in 2" thick and clay layers
					approximately 0.5" thick, description as above.
					1.6-2.0' Sand: Light brown (7.5 YR 6/4), very fine to fine grain, trace
					medium to coarse, moderately sorted, loose, damp, no odor.
32	34	1.2	8 9 7 10	4.10/-0.67	0-1.2' Sand/Silt: Light reddish brown (5 YR 6/4), very fine grain,
					almost as fine as silt, very well sorted, loose, damp, uniform, moderate
					odor.
34	36	1.6	10 8 9 10	2.0/-0.9	0-0.2' Sand: As above, then fining down into silt.
					0.2-1.6' Silt: Reddish brown (5 YR 5/4), predominately grainy, some
					smooth layers brown (7.5 YR 4/4), somewhat cohesive/packed, damp,
					slight odor?
36	38	0.8	12 14 13 2	3.01/0.10	0-0.8' Sand/Silt: As above in 32' to 34', moderate odor.
38	40	1.3	10 11 13 13	1.31/-0.45	0-1.3' Sand/Silt: As above.
40	42	0.8	14 17 15 14	1.17/-0.59	0-0.8' Sand/Silt: As above, finely interbedded/laminated with some
					smooth silt as above in 34' to 36', predominately grainy, somewhat
					loose, damp, slight odor.
42	44	1.3	16 12 10 11	0.84/-1.09	0-1.3' Silt: As above, but slightly finer, silt, reddish brown (5 YR 5/4),
					grainy, uniform, some vesicles, trace black staining, damp 0 to 0.5',

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/ OVM (ppm)	Sample/Core Description
0	5	1.0	63.3/'1.62	0-0.5' Silt/Topsoil: Very dark brown (7.5 YR 2.5/3) smooth silt, somewhat loose,
				organics grass/roots, moist, no odor.
				0.5-1.0' Silt/Sand: Dark brown (7.5 YR 3/4) silt and very fine to fine grain sand,
				moderate to well sorted, trace medium sand, loose, trace fine to coarse gravel,
				angular to subround up to 1-1/2".
5	10	2.5	2466-5420/	0-0.5' Silt: Dark brown (7.5 YR 3/3) smooth silt, slightly clayey, slightly plastic,
			1.00-1.83	trace fine to coarse angular to subround gravel up to 1" diameter, trace roots.
				0.5-1.0' Sand: Brown (7.5 YR 4/4) grained trace medium to moderate sorted,
				coarse, little fine to coarse gravel up to 2" diameter, up to 2" diameter most
				<1/2", loose, moist, no odor.
				1.0-1.7' Sand: Brown (7.5 YR 5/4) fine grain, well sorted, moist, loose, no odor.
				1.7-2.5' Sand: Brown (10 YR 4/3) fine to very coarse grain, very poorly sorted,
				some fine gravel up to 3/4" angular to subround, trace coarse gravel up to
				1-1/4" angular to subround, some silt, moist, loose, no odor.
10	12	NR		No recovery.
15	20		84-1950/	0-1.2' Silt/Clay: Brown (7.5 YR 5/4) smooth silt, very clayey, very plastic
			-1.39--0.67	probably clay varved through can't see them, slight swirl of reddish brown/
				yellowish red, wet, no odor.
				1.2-1.8' Silt/Sand/Clay: Brown (7.5 YR 4/4) smooth silt, fine sand and clay,
				sand is moderate sorted, trace medium to very coarse, trace fine gravel up to
				1/2", silt and clay very soft, overall: plastic, wet, no odor.
				1.8-3.0' Silt/Clay: (7.5 YR 4/4) smooth silt and clay with some fine grain
				moderate sorted sand, trace medium to coarse, very sticky, wet, no odor, no
				signs of bedding.
				3.0-4.0' Silt: Brown (7.5 YR 4/4) grainy silt, somewhat loose, wet trace black
				staining, odor, trace fine gravel angular to subangular.

Sample/Core Log (continued)

Boring/Well GMSB-140

Prepared by Jill Flater

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/ OVM (ppm)	Sample/Core Description
				4.0-5.0' Sand: Brown (7.5 YR 5/3) up to 3/4" fine grain, well sorted, no silt,
				trace very fine, loose, strong odor, wet.
20	25	2.5	17.76-3440/	0-0.5' Sand: As above.
			-0.84--1.26	0.5-1.0' Sand: Reddish brown (5 YR 5/4) fine grain, trace medium to very coarse,
				poorly sorted; 0.5-0.8 silty with some fine to coarse gravel up to 2" diameter
				subangular to subround; otherwise little silt, little fine to coarse gravel up to 2"
				subangular to subround, loose, wet, strong odor.
				1.0-2.0' Sand/Gravel: Dark brown (7.5 YR 3/4) trace to little very fine to fine
				medium to very coarse grain sand and fine to coarse gravel, very poorly sorted,
				loose, wet, strong odor, fine to coarse gravel up to 2" most fine ≤3/4"
				subangular to subround.
				2.0-2.5' Sand/Gravel: As above, very fine to very coarse sand.
25	30	0		No recovery (pushed rock).
30	35	1	7.06-9.33/	0-4.0' No recovery.
			1.32--1.39	4.0-5.0' Silt/Sand: Red brown (5 YR 5/4) grainy silt and very fine silty sand, well
				sorted homogeneous, somewhat loose to loose, wet, strong odor (pushed a
				rock only recovery was last foot of sample) 4" rock at 4.0, cored slightly by
				barrel.
				EOB @ 35'.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-2B

Prepared by Raymond Flynn and Ted Powell

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
245	250	5	800/0	Very Fine Sand. Some silt, reddish brown, dense to very dense, well sorted.
250	255	5	7,500/0	Very Fine Sand. As above, collect grab water sample GBGM-2/255.
255	260	5	2,000/0	Very Fine Sand. Some silt, reddish brown, well sorted, very dense.
260	265	5	4,000/0	Very Fine Sand. As above.
265	270	5	10,000/0	Very Fine Sand. Reddish brown, as above, but with trace brown clay in small lenses 1/4 to 1/3" thick (moderately plastic), wet.
270	275	5	>10,000/0	Very Fine Sand. Red brown, some fine sand, trace clay, very dense, saturated, well sorted.
275	280	5	>10,000/0	Very Fine Sand. Reddish brown with silt, abundant air/gas bubbles throughout, medium dense, trace medium to coarse sand. At approximately 1 to 1.5' medium sand, (trace fine and coarse grain, light brown, medium dense. 4,000 ppm OVA).
				At 1.5 to 2' Clay. Light red to red, moderately plastic to plastic, very fine sand is mixed in with the clay. These units may be slough material, driller notes he washed back and forth down the hole and in his opinion this material was slough.
280	280.5	0.5	60/0	Bedrock (metabasite), black to dark greenish black. Very hard (6-6.5') likely bedrock phaneritic, melenocralic.
				Well screen set at 271 to 281' bgs.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
0	24			Blind Drill, predominately fine to medium sand with variable gravel.
24	26	8	7,4,3,6	Sand. Light brown (7.5 YR 6/4) medium to fine, trace coarse and very
				coarse, moist, medium dense, moderately well sorted. OVA 3.
26	28	14	3,2,2,3	Sand. Dark yellow brown (10 YR 4/4) medium to coarse, some fine trace
				very fine and very coarse moderately well sorted, loose to medium dense,
				top of spoon very moist, to wet, lower 4 inch saturated. OVA 3.
28	30	14	4,3,2,2	0-3': Sand. As above, but slightly more coarse and very coarse, saturated.
				3-14": Alternating seams of silt and clay, silt, brown (7.5 YR 4/4) medium
				stiff, variable clay content, very moist, clay. Red (2.5 YR 4/6) platy to fissile, soft
				to moderately firm, plastic, moist. OVA 3.
30	32	21	5,4,4,3	Alternating seams of silt and clay as above, silt seams 1 to 3 inches thick,
				medium stiff at top of spoon, hard at bottom. Silt has variable very fine to
				fine sand throughout. Clay seams ¼ to 2 inch thick, fissile, soft to medium
				stiff, plastic. OVA 3.
32	34	14	7,5,10,10	0-6": Clay and silt seams as above.
				6-11.5": Silt, as above with three 1 to 2inch very fine silty sand seams,
				brown (7. 5YR 5/4) top sand seam is very wet, lower are moist, medium
				dense to dense, moderately well sorted.
				11.5-14": Sand. Brown (7.5 YR 5/4) very fine with silt, trace clay, medium
				dense, very moist, moderate sorting. OVA 22.5.
34	36	15	8,10,12,15	0-3": Sand. Very silty, brown (7.5 YR 5/4) variable clay, two small ¼ inch
				red clay seams, plastic.
				3-7": Sand. Very fine with silt, brown (7.5 YR 5/4), trace clay in part, moderate
				dense to dense, moderate well sorted.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-5 Page 3 of 8

Prepared by R. Flynn/D. Hegrenes

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
75	80	5	5/0.0	Sandy Silt. As above with 3" clay inclusion at 0.3-0.5', distorted laminations forming swirls. (Bag sample taken.) No gravel detected, sample has dark brown (7.5 YR 3/3) color. Trace clay, inclusions, further large clay inclusions at 76' and 79' bgs.
80	85	5	8/0-0.1	Sandy Silty. As above, firm and saturated, 1/4" lamination of medium sand at 83.5', immediately underlain by similar thickness of weak red clay.
85	90	5	25/0.0	0-3': Sandy Silt. As above with trace to some weak red clay, inclusions.
				3-5': Sandy Silt. Weak red clay seams in approximately equal amounts, distinct boundaries.
90	95	5	250/0.3	0-2.5': Sandy Silt. Weak red clay as above.
				2.5-2.6': Clay. Fissile, very firm, saturated, dark brown (7.5 YR 3/4).
				2.6-5': Fine to very fine sand, loose to slightly dense, saturated, dark brown (7.5 YR 3/4) trace angular gravel, clay inclusions at 3.8 and 4.1'.
95	100	5	600/0.0	0-2': Silt, clay interbedded with fine. Clay laminations more abundant toward top, more sandy toward base, saturated and firm. Overall dark brown (7.5 YR 3/4).
				2.5-5': Sand. Fine to very fine, slightly dense, very well sorted, brown (7.5 YR 5/3).
100	105	5	300/0.0	0-2': Sand. As above.
				2-2.5': Silt. Firm, some very fine sand, saturated, fine pale grey lamination otherwise brown (7.5 YR 5/3).
				2.5-3': Fine Sand. Very well sorted, brown yellow (10 YR 6/6) mottling (approximately 60 percent). Rest of sample same texture but brown (7.5 YR 5/3).
				3-3.5': Clay. Weak red (10 R 5/4), firm to very firm, fissile/saturated with approximately 0.2' of finely laminated brown silt.
				3.5-5': Medium Sand. Becoming finer with depth. Loose, saturated very well sorted, brown (7.5 YR 5/3).
105	110	5	35/1.3	Sand. Medium to fine sand, well sorted, loose, saturated. Trace to some well rounded gravel. Gravel content increases toward base of sample. Sand light brown (7.5 YR 6/4). Gravel well rounded to surounded, variable composition.

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
30	35	5	2.5-15/0	0-2': Silt and Clay. As above.
				2-3': Silt. As above with trace clay medium stiff.
				3-4': Very Fine to Fine Sand. Well sorted, medium dense, brown (7.5 YR 4/3) several 1/4 to 1/2 inch silt seams.
				4-4.5': Silt. Medium, stiff, brown (7.5 YR 4/3) well sorted trace 1/16 to 1/8 inch red clay seams.
				4.5-5': Very fine to medium Sand. Trace coarse and silt, loose, poorly to moderately sorted, brown (7.5 YR 5/3).
35	40	5	4.5-55/0	0-4': Sand. Medium to coarse, trace fine, variable compostion quartz and mafics, loose to medium dense, trace small gravel, moderately to poor sorting, brown (7.5 YR 5/4).
				4-5': Sand. As above, some small gravel approximately 10 mm, lose, brown (7.5 YR 5/4).
40	45	5	25-175/0	0-1.5': Sand. Medium to coarse, some fine, loose to medium dense, trace small gravel subangular to subround, color as above.
				1.5-2.5': Sand. Coarse some fine and gravel 1/8 to 1 inch subrounded to subangular, very poorly sorted, loose.
				2.5-5': Sand. Very fine to medium some coarse, trace silt medium dnese, very poorly sorted (7.5 YR 5/4).
45	55	0	-/-	Lost sample to formation - put on retainer. Trip in - sample is still in borehole - recover sample although will be highly disturbed.
45	50	5	10-20/0-.7	Sand. Coarse some medium to trace fine and very fine, some gravel, 1/8" - 3/4", subround to subangular, loose very poorly sorted variable compositon (quartz, feldspar, mafices) brown (7.5 YR 4/3).
50	55	5	20-100/0-2.0	Sand. As above.
55	60	5	200-3,000/-	0-3': Sand. Medium, some coarse and fine, trace very fine, poorly sorted, loose to medium dense, some gravel 1/8 to 1/2 inch, subrounded to subangular, brown (10 YR 5/3).
				3-5': Sand and Gravel. Sand fine to coarse, gravel 1/8 to 3/4 inch, subround to subangular, loose very poorly sorted.
60	65	5	700-6,000/-	0-3.5': Sand and gravel as above, trace cobbles. 2 to 3 inch subround to round.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-9

Prepared by Dan Hegrenes and Ted Powell

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				3.5-5': Sand. Fine to coarse with gravel 1/8" to 1/2", subround to subangular, very poorly sorted, loose, 6,000 ppm on OVA, very dark grey (no mansel match) large (3") cutting of sandstone weak red to dusky red (10 R 3/3 to 4/3) in bit.
65	70	5	0-20/0	Sand. Fine with very fine, some silt, trace coarse, well sorted, dense, red brown (5 YR 4/4).
70	75	5	5-11/-	Sand. As above, collect groundwater grab sample SBGM-7/62 at 15:30.
75	80	4	4-8/-	Sand. Fine with medium and very fine, trace coarse, some silt moderately well sorted, loose, brown (7.5 YR 4/4).
80	85	0	-/-	Only 4 feet of recovery from 75 to 85 feet, core run - bottom half of barrel like lost.
85	90	5	2-3.5/-	Sand. Very fine to fine with silt some medium, trace coarse, brown (7.5 YR 5/3), very loose moderate well sorted, very homogenous.
90	95	5	2.5-10/-	Sand. As above.
95	100	5	2.5-17/-	Sand. As above.
100	105	5	5-17/-	Sand. As above. Stop drilling for the day.
105	110	2	23/0	Sand. Very fine fo fine some medium, trace coarse, some silt, red brown (5 YR 6/3), poorly sorted, loose.
110	115	5	2/4/2000	0-2.5': Silt. Trace very fine and fine grain sand, soft nonplastic, red brown (5 YR 4/4) trace clay.
				2.5-3': Sand. Very fine with silt, trace fine, medium dense, red brown (5 YR 4/3).
				3-4': Clayee Silt. Trace very fine sand, moderate plastic, red brown (5 YR 5/4).
				4-5': Sand. Very fine with silt, trace fine, brown (7.5 YR 5/3) dense, trace red brown clay inclusions 1/4 to 1/2 inch, slight plastic platy, medium stiff.
115	120	5	2-7/-	0-4.5': Sand. Very fine to fine, trace medium, some silt, dense, brown (7.5 YR 5/4), moderate sorting.
				4.5-5': Silt. With very fine sand, trace clay, moderate dense, red brown (5 YR 5/3).
120	125	5	2-4/-	0-2.5': Silt. As above.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-9

Prepared by Dan Hegrenes and Ted Powell

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				2.5-4.5': Sand. Very fine to fine, some silt, brown (7.5 YR 5/3) dense, moderately sorted at 3 and 3.5 feet. 1.5-2 inch silt seams, some very fine sand, red brown (5 YR 5/8) soft.
				4.5-5': Silt. Trace clay and very fine sand, red brown (7.5 YR 5/3) medium stiff.
125	130	4	1.5-3/-	Sand. Very fine with silt trace fine to medium, very soupy, loose to medium dense, moderate well sorted, brown (7.5 YR 5/3).
130	135	5	1.5-3/-	0-1.5': Sand. As above.
				1.5-2': Silt. Trace very fine and clay, medium dense to dense, moderately well sorted, red brown (5 YR 4/4).
				2-5': Sand. Medium with fine, some silt, trace coarse, medium sorting, medium dense, brown (7.5 YR 5/3).
				Casing twisted off at approximately 125 ft bls, unable to retrieve or drill further. Retrieve casing and rods, resume drilling at 14:10.
135	140	3	1.5-5/-	Sand. Fine and very fine, some medium, some silt, trace clay, medium dense, moderate well sort, brown (7.5 YR 5/3).
140	145	0	-/-	Apparently Sand. As above, lost sample.
145	150	5	2.5-5/-	Sand. Very fine with fine and silt, trace medium dense, brown (7.5 YR 5/3). At 3 feet a 2 inch silt seam, very dense with approximately 1/4 to 1/2 inch of clay red brown (5 YR 5/4) soft
150	155	5	2.5-30/-	0-.5': Sand. Fine with very fine, some medium, medium dense, moderately well sorted, brown (7.5 YR 5/2).
				.5-2.5': Silt. Some very fine sand, trace clay, color as above.
				2.5-4.5': Sand. Fine some very fine, trace medium, dense, moderately well sorted, brown (7.5 YR 5/2) at 3.5 feet a 1/4 inch silty clay seam, very stiff to hard.
				4.5-5': Silt. With very fine sand, very dense brown (7.5 YR 5/2) abundant very fine laminae (varves) alternating silt as above and red brown silty clay (30 ppm).
155	160	5	2.5-17/-	Sand. Fine with very fine, some silt, trace medium dense, brown (7.5 YR) moderate well sorted.
160	165	5	7-40/-	0-2': Silt. Trace clay, trace very fine sand, very dense, hard, 1/8" to 1/4" laminae.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-9

Prepared by Dan Hegrenes and Ted Powell

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				2-5': Sand. Very fine, some fine, some silt, moderate well sorted, brown (7.5 YR 4/3) (40 ppm).
165	170	5	5-22/1.7-2.2	0-2.5': Sand. As above, likely slough.
				2.5-3.5': Silt. Some very fine sand, trace clay, brown (7.5 YR 4/2) moderate stiff to stiff.
				3.5-5': Sand. Very fine, some silt, trace fine, dense, brown (7.5 YR 4/3) moderate well sorted.
170	175	5	15-50/1.7-2.2	Sand. Fine to very fine in top foot of core, grading to fine with medium in bottom 3 feet. Moderate well sorted, dense, brown (7.5 YR 4/3).
175	180	5	2.5/1.1	0-4': Sand. Brown (7.5 YR 4/3), very fine sand with silt, trace clay, moderately dense to dense, clay reddish brown (2.5 YR 5/4), as inclusions 2 to 4 inch, plastic, soft.
				4-5': Sand. Same color, fine to very fine, some medium grained, trace coarse, some silt.
180	185	5	2.5-3/1.5-2.0	0-0.5': Sand as above.
				0.5-5': Silt. With very fine to fine sand lenses brown (7.5 YR 5/4), lenses 1 to 2 inch thick, silt breaks to silty very fine sand.
185	190	5	2.5/0.3-0.8	0-3.5': Silt. With very fine to fine sand, trace clay, occasional lenses very fine to fine silty sand. Lenses occur 1 to 6 inch thick, medium dense.
				3.5-4': Silt. With clay reddish brown (5 YR 4/3) lenses/ laminated layers, plastic, soft.
				4-5': Sand. Very fine to fine grained, with silt.
190	195	5	2.5-8/0.9-1.1	0-2.5': Sand. Very fine to fine, trace medium, some silt, brown (7.5 YR 5/3), dense.
				2.5-3': Silt. With clay, trace very fine sand. Upper 6 inch is silty clay. Cohesive, moderately plastic.
				3.5-5': Silt. With very fine sand, trace clay brown (7.5 YR 5/2), dense.
195	200	2	2.5-4/.7-1	1-2': Sand. Fine to very fine, some silt, trace medium moderate dense, moderately sorted, brown (7.5 YR 4/3).
200	215	-	-/-	No recovery.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-9

Prepared by Dan Hegrenes and Ted Powell

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
215	235	-	-/-	No recovery - Casing twisted off at 190 feet pull rods and upper 190 feet of casing and abandon hole with bentonite - cement grout.
				9/15/97 Skid rig approximately 8 feet to the northeast and start GM-9 again.
0	195			Blind drill. Install casing to 195 feet no returns.
195	200	5	3.5-5/2.3-3.2	0-2': Sand. Very fine to fine, some silt, trace medium, moderate well sorted, dense, red brown (5 YR 4/3).
				2-5': Sand. Very fine, silty, trace fine, very dense clay inclusion at 2.5 feet, soft, platic red brown (2.5 YR 4/3) sand grades to silt with a very fine sand at 4 feet.
200	205	5	3.5-4.5/2.6-3.2	0-3': Silt. Some very fine sand, trace clay, stiff, red brown (5 YR 4/3), 1/4 to 1/2 inch clay seam at 1 foot, red brown, plastic soft.
				3-3.5': Clay, trace silt, soft to plastic, dark red brown (2.5 YR 3/4).
				3.5-4.5': Sand. Very fine to fine, some silt, dense, moderately well sorted, brown (7.5 YR 4/2).
				4.5-5': Silt. With very fine sand, trace clay, dense, brown (7.5 YR 4/3).
205	210	5	4.5-5/2.3-2.2	0-.5': Clay. Silty, soft, plastic, red brown (5 YR 4/3).
				.5-5': Silt. With a very fine sand, trace clay, dense 1/8 to 1/4 inch clay lenses at 3 feet and from 4.5 to 5 feet clay is soft moderate plastic, plastic, red brown (2.5 YR 4/4).
210	215	5	4.5-6/2.1-2.6	0-3': Silt. Trace to some very fine sand, moderate stiff, brown (7.5 YR 4/3) trace clay. At 1-1.5 ft clay medium stiff, moderately plastic, red brown (2.5 YR 4/4) silt will separate along very thin (<1 mm) seams of very fine sand.
				3-3.5': Clay. Moderate stiff to stiff, moderately plastic, very fine laminae, slightly platy, red brown (2.5 YR 4/4).
				3.5-5': Silty Clay. Stiff, moderate plastic, trace very fine sand. Dark red grey (5 YR 4/2) trace pea gravel, subangular, clay will part along very fine sand seams (<.5 mm thick) clay lenses range from 1/4 to 1/2 inch.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-10

Prepared by Dan Hegrenes and Pat Bartnik

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				2-3.5': Sand (7.5 YR 4/3) brown, very coarse to fine, very poorly sorted, trace gravel (2 mm to 1.5 in), with trace clay inclusions, dark reddish brown (5 YR 3/4) occur as large clay balls (1 inch).
				3.5-5': Sand and Gravel. (7.5 YR 4/3). Sand very coarse to very fine, very poorly sorted gravel, fine (2 mm) to cobbles (3 in) with clay inclusions dark reddish brown (5 YR 3/4) laminated internally.
145	150	5	1-2/-	0-1': Sand and Gravel. Same as above without clay inclusions.
				1-2': Gravel. Dark brown (7.5 YR 3/2) sandy (very coarse to very fine, very poorly sorted) gravel fine (2 mm) to cobbles (4 in) subangular to subrounded.
				2-5': Sand. Brown (7.5 YR 5/4) medium to fine, trace coarse sand, trace fine sand, moderately sorted, trace gravel fine (2 mm) to medium (2 in) subangular to subrounded.
150	155	5	2-9/-	0-5': Sand. Brown (7.5 YR 4/3) fine to very fine, silty, fairly well sorted.
155	160	5	1-4/-	0-1': Sand. Brown (7.5 YR 4/3) as above.
				1-3': Silt. Brown (7.5 YR 4/3) compact stiff.
				3-5': Silt. Very dark brown (7.5 YR 2.5/2) gravely (2 mm to 1.5 in) subangular to subrounded, trace sand, dry dense compact very stiff (till).
155	160	5	1-3/-	0-5': Silt. As above.
				11:45 Stop drilling for the day. Will return on 9/22/97 to continue. Will begin by collecting a water sample then.
				13:30 9/22/97 Resume drilling activities at GM-10 by collecting water sample (#2) at 150-155 feet. Drill depth 160 ft.
				17:15 Collected Sample GBGM-10/155.
				18:10 Completed sampling and left site for the day.
				Tuesday 9/23/97 continued drilling.
165	170	5	1.5-9/0-0	0-4.5': Silt. As above, brown (7.5 YR 4/2) gravel (cobbles) up to 2.5 in.
				4.5-5': Sand. Brown (7.5 YR 5/2) clayey trace gravel (2 mm to 1 in).

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-11

Prepared By Ted Powell/Pat Bartnik

From (feet)	To (feet)	Core Recovery (feet)	OVA/PID	Sample/Core Description
				clay inclusions at 0-3.5', medium stiff to stiff, slight to nonplastic, red brown (2.5 YR 4/4) slightly reactive to HCL.
75	80	5	3-3.5/0-1.0	0-5': Silt with Clay, to clayee silt, soft to medium stiff, moderately plastic where clayey, brown (7.5 YR 4/3). At 2.5 ft and 3.5 ft clay inclusions 1-2" thick, stiff, fissile, non-plastic dark red brown (2.5 YR 3/4). Effervescent in HCL. At 2.5 feet, trace gravel, 3/4" subangular.
80	85	5	3-4/.4-1	0-5': Silt. With clay at top of section grading to trace clay at bottom, medium stiff, moderate plastic where clayee. At 2.5 feet a 2" sand seam, very fine, some silt, medium dense, occasional clay inclusions, dark red brown (2.5 YR 3/4), platy non to slightly plastic, effervescent.
85	90	5	3/0-.6	0-5': Silt. Variable clay, soft to moderate stiff, with very fine sand in part, moderately plastic where silty, brown (7.5 YR 4/4) two clay lenses (1' and 2.5') 1 and 2" thick, very stiff to platy, slightly effervescent, non to slightly plastic, dark red brown (2.5 YR 3/4).
90	95	5	2.5-3.5/0.3-.7	0-5': Silt. As above, clay inclusions/seams at .1', 3' and 4.5 ft, 1/4" to 3" thick, clay inclusions as above.
95	100	5	2.5-4/0-.6	0-5': Sandy Silt. Sand very fine to fine, trace clay, variegated color due to silt/sand percentage, silt is dark red grey (5 YR 4/2) sandy silt is brown (7.5 YR 4/4) soft to medium stiff.
100	105	5	2.5-5.5/0-.7	0-4.5': Sandy Silt and Silt. As above with red brown clay inclusions, moderate stiff, slight plastic, red brown (5 YR 4/3).
				4.5-4.7': Silty Clay. Brown (7.5 YR 4/3) very hard, nonplastic, homogenous.
				4.7-5.0': Very Fine Sand. Some silt, trace fine, dense, red brown (5 YR 4/3) moderate well sorted.
105	110	5	3.5-7/.1-.7	0-.5': Very Fine Sand. With silt, color as above, dense.
				.5-5': Very Fine Sand. Trace silt, well sorted, medium dense, red brown (5 YR 5/4) noneffervescent.
110	115	5	3.5-7/.3-1.0	0-5': Very Fine Sand. As above but with trace fine sand.
115	120	5	2.5-4/0-1.1	0-4': Very Fine Sand. Some silt, trace fine, dense, moderately well sorted, red brown (5 YR 5/4).
				4-5': Very Fine Sand and Silt. Some very fine sand, trace clay, medium stiff, red brown (5YR 4/3) very fine sand is as above, red brown (2.5 YR 4/4) color varies depending on silt/sand

Boring/Well GM-12

Prepared by Ted Powell and Pat Bartnik

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
40	45	5	300-10,000/0-4.7	0-1.5': Sand. Black (5 YR 2.5/1) medium to very fine, silty with silty clay inclusion, dark yellow to brown (10 YR 4/4) trace very fine gravel (4 mm).
				1.5-5': Sand. Very dark brown (7.5 YR 3/1) to brown (7.5 YR 5/2) fine to very fine, silty, trace medium sand, loose to medium dense, trace fine gravel (7 mm) subrounded.
45	50	5	30-150/0-0.4	0-1.5': Sand. Black (1 gley 2.5 1N) medium to very fine, moderately sorted, silty, trace gravel, trace coarse sand.
				1.5-3': Sand. Very dark greyish brown (10 YR 3/2) fine, to very fine, silty, well sorted compact.
				3-5': Sand. Black (1 gley 2.5 N) silty grades into a sandy silt.
50	55	5	5-300/0-1.1	0-1.5': Sand. Very dark greyish brown (10 YR 3/2) very fine, silty, very well sorted.
				1.5-1.8': Sand. Greenish black (GLEY 2.5/1 10 GY) to black (1 GLEY 2.5/N) medium to fine, well sorted, trace fine gravel (approximately 3 mm) subrounded.
				1.8-1.9': Clay. Dark grey (10 YR 4/1) silty, plastic.
				1.9-3.5': Sand. Black (1 GLEY 2.5N) medium to very fine, silty, very poorly sorted, gravely (2 mm to 4 in).
				3.5-5': Sand. Very dark greyish brown (2.5 YR 3/2) medium to very fine, silty, trace coarse sand, trace very fine, gravel (approximately 2 mm to 4 mm).
55	60		30-200/0-1.3	0-0.7': Silt. Black (1 GLEY 2.5/N) sandy (very fine) soupy (watery).
				0.7-1': Silt. Dark brown (7.5 YR 3/3) sandy (very fine) soft.
				1-5': Sand. Very dark grey (7.5 3/1) variegated black (2.5 Y 2.5/1) fine to very fine, silty.
60	65	5	60-130/0-2.2	0-5': Sand. As above, but with silt laminae, soft to medium stiff, very dark grey (7.5 YR 3/1) medium dense, between 3.5 and 4 feet.
65	70	5	4-27/0-0.1	0-5': Silt. Variegated brown (7.5 YR 4/2) and black (1 GLEY 2.5N) soft to medium stiff, black coloring increases downward and is dominant between 4 and 5 feet. Clayey, black areas may be sandy silt.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-12

Prepared by Ted Powell and Pat Bartnik

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				1.5-3.5': Sand. Reddish brown (5 YR 4/3) very fine silty, no mottling or staining.
				3.5-5': Silt. Reddish brown (5 YR 4/3) trace very fine sand, trace clay, medium stiff.
105	110	5	35-110/0-0.2	0-5': Silt with Sand. Lenses and clay inclusions. Silt, reddish brown (5 YR 4/3) trace very fine sand, trace clay. Sand, very fine silty, very well sorted occurs in lenses between 1.0 and 1.3, 1.4 and 1.6 ft, clay inclusions, mottled reddish brown (5 YR 4/4) and blackish (1 GLEY 2.5N), medium stiff.
110	115	5	35-105/0-1.4	0-5': Silt and Sand. Lenses as above. Sand lenses between 1.0 and 1.3 and 4.8 and 4.9 ft. Clay inclusion at 2.3 to 2.5 ft is mottled red and black as above.
115	120	5	35-170/-	0-5': Sand. Brown (7.5 YR 4/3) very fine, trace silt, very well sorted.
120	125	5	80-195/-	0-4': Silt. Brown (7.5 YR 4/3) and dark grey (7.5 4/1) clayey, moderately plastic to plastic, medium stiff, with clay inclusions reddish brown (5 YR 4/3) and black (1 GLEY 2.5N) mottled.
				4-5': Sand. Brown (7.5 YR 4/3) very fine silty.
125	130	5	40-275/-	0-1': Sand. Brown (7.5 YR 4/3) very fine silty trace clay, very well sorted.
				1-1.2': Silt. Brown (7.5 YR 4/2) sandy.
				1.2-5': Sand. Brown (7.5 YR 4/3) very fine, silty.
130	135	5	65-250/-	0-1': Silt (7.5 YR 4/3) brown, trace very fine sand, trace clay inclusions, reddish brown and black, as above.
				1-2': Sand. Brown (7.5 YR 4/3) very fine silty.
				2-5': Silt. Brown (7.5 YR 4/3) medium stiff, homogenous trace clay.
135	140	5	65-350/-	0-5': Silt. Reddish brown (5 YR 4/3) clayey, soft to medium stiff, predominately plastic to plastic, occasional clay inclusions, dark reddish brown (5 YR 4/3) platy to blocky, nonplastic with black (1 GLEY 2.5N) blocky inclusions that are soft.
140	145	5	170-10,000/-	0-5': Silt. As above, but vesicular (gas bubbles).
145	150	5	2,200->10,000/-	0-5': Silt. As above, but medium stiff and very fine inclusions.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-12 Page 7 of 11

Prepared by Ted Powell and Pat Bartnik

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				1.5-3': Silt. Brown (7.5 YR 4/3) medium stiff.
				3-4.5': Sand. Black (1 GLEY 2.5N) coarse to very fine, gravely, trace very fine sand, gravel is 2 mm to 50 mm, subrounded color ranges from black (pyritic) to red.
				4.5-5': Silt, reddish brown (5 YR 5/3) medium stiff, clayey.
215	220	5	250-900/0.3-0.5	0-1': Gravel/Sand/Clay. Very dark greyish brown (10 YR 3/2) very poorly sorted, loose. Gravel 2 mm to 60 mm subangular to subrounded. Sand, very coarse to very fine, silty.
				1-1.5': Sand. Very dark grey (10 YR 3/1) very coarse to fine, very poorly sorted, trace very fine gravely, subangular to subrounded (2 mm to 30 mm), some silt (nodules).
				1.5-2': Sand. Very dark grey (10 YR 3/1) medium to fine trace coarse sand, trace very fine sand/silt fairly well sorted, loose.
				2-5': Gravel. Black (1 GLEY 2.5/N) to black (2.5 Y 2.5/1) lightens downward, very poorly sorted (2 mm to 3 in) angular to round, sandy, very coarse to medium, trace fine sand to silt, silt and clay content increase between 3 and 5 feet, loose.
220	225	5	500-1,800/0.3-1.2	0-0.5': Gravel. As above.
				0.5-1': Sand very dark grey (10 YR 3/1) coarse to medium, trace very coarse, trace fine to very fine, gravely (2 mm to 60 mm) subanuglar to subrounded.
				1-5': Gravel. Black (2.5 Y 2.5/1) and (1 GLEY 2.5N) darkens downward, very poorly sorted (2 mm to 3 in) angular to subrounded trace sand/silt.
225	230	5	1,300-4,500/0.1-1.2	0-5': Gravel. As above, but size of gravel increases to 4 in at 2.5 feet.
230	235	5	2,200-3,800/0.4-200	0-2.5': Gravel. Very dark grey (2.5 Y 3/1) very poorly sorted (2 mm to >4 in) subangular to subrounded, sand, very coarse to very fine.
				2.5-5': Gravel/Sand/Clay. Very dark grey (2.5 Y 3/1) very poorly sorted, mildly cohesive, gravel (2 mm to > 4 in), sand, very coarse to very fine.
				Rain and thunder, halt drilling to collect water sample between 225 and 230 feet.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-12

Prepared by Ted Powell and Pat Bartnik

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				17:40 still raining, cease operations for the day. No water sample collected.
				10/7/97 Will collect water sample this morning between 225 and 230 feet.
				Collected water sample GBGM-12/230.
				Unable to advance or remove casing. End of drilling.
				Casing free in hole trip in with 20 foot core barrel.
				6" casing installed to 235 ft bls.
235	240	5	300-2,100/-	0-1': Sand and Gravel. Very poorly sorted, loose to medium dense, sand medium to very coarse, some fine and very fine, trace silt, gravel, subround to subangular, 1/8" to 1". Dark grey (5 YR 4/1).
				1-4': Sand with gravel, very poorly sorted, loose, sand medium to very fine with fine some very fine, some silt, gravel subround to subangular, 1/8" to 3" very dark grey (7.5 YR 3/1).
				4-5': Gravel. With sand, poorly sorted, gravel 1/8 to 1/4" subrounded to subangular, predominately mafics, sand coarse to very coarse with fine, trace very fine, and silt, color as above.
240	245	5	300-2,100/-	0-1': Gravel. With sand as above.
				1-5': Gravel. Loose, poorly sorted 1/8" to 2/5" subround to angular, some coarse to very coarse sand, trace fine sand, trace silt very dark grey (5 YR 3/1).
245	250	5	100-250	0-1.5': Gravel. Moderately sorted, highly fractured, 1/4" to 4" subround to anglar, some very coarse sand, trace fine and medium, loose very dark grey (5 YR 3/1).
				1.5-3.5': Sand. Very fine to fine, trace very coarse sand, trace 1/8 to 1/4" gravel. At 2.5 feet a 2" gravel lense 1/8 to 1/4" subangular, with medium to very coarse sand, trace silt. From 2 to 3.5 feet several large to medium gravel 1/2" to 3" subround to subangular, sand ranges in color from red brown (5 YR 4/3) to dark red brown (5 YR 2.5/2).
				3.5-5': Sand. With gravel, sand medium to very coarse, some fine trace very fine, gravel 1/8 to 2" subrounded to angular, very poorly sorted, dark red brown (5 YR 3/2).

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-13

Prepared by Ted Powell and Bruce Evans

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
25	32	7	3.5-17/1.5-3.2	Sand. Strong brown, as above.
32	35	3	3.5-6/1-6.6	Sand. Light brown (7.5 YR 6/4) very fine to fine grained, some silt, well sorted, loose, moist to very moist.
35	40	5	4-5/0-.8	0-4': Sand. As above.
				4-5': Sand. Strong brown (7.5 YR 4/6) very fine grained, some silt, well sorted, loose, moist to very moist, wet.
40	45	5	30-85/0-6.6	Sand. Very fine to fine, some silt, well sorted, medium dense, very moist, brown (7.5 YR 5/4).
45	50	5	2.5/0	0-4': Sand. Very fine with silt, trace fine, medium dense to dense, well sorted, brown (7.5 YR 5/7).
				4-4.5': Sand. Very fine to fine, with medium and coarse, some silt, moderate sorting, color as above.
				4.5-5': Sand. Very fine, silty, some fine moderate well sorted, dense to medium dense, brown (7.5 YR 5/4).
50	55	5	2.5-3/0	0-.3': Clay. Some silt, soft, plastic, dark brown (7.5 YR 3/2).
				.3-3.5': Sand. Silty, dense, very fine grained, some fine trace medium, brown (7.5 YR 5/4) moderate well sorted.
				3.5-5': Silt. Very fine sand, trace fine, brown (7.5 YR 5/4) medium dense, moderate well sorted.
55	60	5	2.5/0	Sand. Very fine with silt, trace fine, well sorted, medium dense, brown (7.5 YR 4/4).
60	65	5	2.5-4/0-0.5	Sand. As above, at 1 foot there is a 2 inch silt lense, silt with very fine sand, dense to medium dense, brown (7.5 YR 4/4).
65	70	5	2.5/0	0-2': Sand. Very fine silty, medium dense to dense, moderate well sorted brown (7.5 YR 4/4).
				2-5': Silt. Some very fine sand, trace clay. At 2.5 and 3 feet, 2 inch clay seams, medium stiff, non to slight plastic, red brown (2.5 YR 4/4).
70	75	5	2.5/0	Silt, soft to medium stiff, trace very fine sand, trace clay, moderate well sorted, brown (7.5 YR 4/3). Clay seams (1-2 inch) interspersed throughout, soft, fissile, non to slightly plastic, red brown (5 YR 4/4).
75	80	5	3.5-30/0	Silt. Some clay grading to silty clay in part, dark red brown (5 YR 4/2) soft to medium stiff, moderately plastic in clayey zones, slight plastic in silt, clay inclusions, nonplastic to fissile, red brown (2.5 YR 4/4).

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-13

Prepared by Ted Powell and Bruce Evans

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
80	85	5	5-40/0-2	Silt. With red brown clay, as above.
85	90	5	4-70/9.7-12.4	Silt. Some very fine sand, trace clay, medium stiff, brown (7.5 YR 4/3) at 3.5 to 5 feet clay inclusions red (2.5 YR 4/6) fissile, soft to moderate stiff, slight plastic, silt has trace coarse sand and small gravel, subrounded.
90	95	5	110-500/8.3-10.2	0-1': Silt with Clay. Trace very fine sand, medium stiff, brown (7.5 YR 4/3).
				1-4.5': Clay and Silt. Fine lamination 1/16 to 3/4 inches thick, clay is hard to nonplastic, red brown (5 YR 4/3) silt is medium stiff, trace to some very fine sand, red grey (5 YR 5/2).
				4.5-5': Sand. Very fine with silt, medium dense brown (7.5 YR 5/3). Occasional thin (1/2 inch) silt seams, silt medium stiff with very fine sand, color as above.
95	100	5	300-5,000/0	Sand. fine with very fine, some medium, trace silt, medium dense, moderately well sorted, red brown (7.5 YR 5/4).
100	105	5	500-10,000/0	Sand. As above, grading to medium, some coarse and fine, trace silt in bottom of sample.
105	110	3	150-1,750/0	Sand. Fine to medium, some silt, trace coarse, loose to medium dense, moderate well sorted, red brown (5 YR 5/4).
110	115	3	1,000-1,700/0	Sand. As above.
115	125	0		No recovery.
125	130	5	2,000-7,000/0	0-2': Sand. Very fine to fine with silt, trace coarse, dense moderate well sorted, red grey (5 YR 5/2).
				2-3.5': Sand. Fine to coarse, some very fine, some silt, medium dense dark bluish grey (GLEY 2 4/10B) poorly sorted, trace small gravel 1/16 to 1/2 inch, subrounded to subangular.
				3.5-4.5': Sand. Very fine to fine, medium dense, moderate well sorted, at 4' a thin (1/4 inch) seam of silty clay, soft, moderate plastic, weak red (2.5 YR 5/2).
130	135	5	2,000-8,000/0	Sand. Fine to very fine, some silt, medium dense, moderate well sorted, red grey (2.5 YR 5/1) at 4.5 feet a 3/4 inch silt seam, soft.
135	140	5	2,000-10,000/0	Sand. Fine with very fine and silt, trace medium, moderate well sorted, medium dense brown (7.5 YR 4/4) at 0.5 feet a 2 inch lense of red brown silt with very fine to fine sand and black clay layers

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-13 Page 4 of 9

Prepared by Ted Powell and Bruce Evans

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				approximately 1/16 to 1/8 inch thick, soft and plastic, slightly platy.
140	145	5	500/2,000/0	0-4': Sand. Fine, some very fine, trace medium, some silt, moderate well sorted, dense.
				4-4.5': Silt. With very fine sand, brown (7.5 YR 5/3) dense, several thin 1/8 inch black clay seams, soft.
				4.5-5': Sand. Fine to medium, some silt, pinkish grey (7.5 YR 6/2) medium dense, moderate well sorted.
145	150	5	200-400/0	0-3': Sand. Very fine to fine, some silt, dense, moderate well sorted.
				3-5': Silt. Trace very fine sand, dark grey (5 YR 4/2) medium stiff, trace clay, black staining.
150	155	5	800-10,000/0	0-2': Silt. As above.
				2-2.3': Clay. Platy, trace silt, non to slight plastic, stiff.
				2.3-4': Silt. Trace very fine sand, trace clay, soft to medium stiff.
				4-5': Sand. Very fine silty, loose to medium dense, red brown (5 YR 5/3) moderate well sorted.
				Set temporary well screen at 140-145 and collect water grab sample GBGM-13/145.
155	160	5	1,000-10,000/0-2.3	0-3': Sand. Very fine with silt, trace fine, moderate well sorted, medium dense, red brown (5 YR 4/4).
				3-5': Silt. Trace very fine sand, trace to some clay, soft, red brown (5 YR 5/3) slight plastic.
160	165	5	1,200-10,000/0.4-2.2	0-2.3': Silt. As above with clay inclusions, clay is soft, platy, slight to moderate plastic, red brown (5 YR 5/3).
				2.4-5': Sand. Very fine, some silt, well sorted, medium dense to dense, color as above.
165	170	5	300-10,000/0.3-7.1	0-1': Sand. As above.
				1-1.5': Sandy Silt. Sand is very fine, some clay soft to medium dense, color as above.
				1.5-2': Clay. Silty, moderate dense, moderate plastic, platy, color as above.
				2-5': Sand. Fine with very fine, trace medium, some silt, moderate well sorted, medium dense, light red brown (5 YR 6/3).

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-13 Page 5 of 9

Prepared by Ted Powell and Bruce Evans

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
170	175	5	500-10,000/0.5-2.3	0-2': Sand. As above.
				2-4': Silt. With very fine, sand, trace clay, soft to loose brown (7.5 YR 5/3).
				4-5': Sand. Very fine some silt, moderate well sorted, medium dense red brown (5 YR 5/3).
175	180	5	4,000-10,000/0-0.7	0-.5': Sand. As above.
				.5-5': Silt. With very fine sand, soft, well sorted, abundant gas bubbles, (vesicles) brown (7.5 YR 4/3).
180	185	5	800-10,000/0-1.6	0-3': Silt. As above.
				3-3.5': Silt. Some clay trace very fine sand, soft minor vesicles, brown (7.5 YR 4/2) slight plastic.
				3.5-3.8': Clay. Trace silt, hard, nonplastic, reacts with HCL, brown (7.5 YR 4/3).
				3.8-5': Silt. Some very fine sand, trace clay, medium stiff, weak HCL reaction, brown (7.5 YR 4/4).
185	190	5	150-1,000/0	Silt. Some clay, some very fine sand, soft, non to slightly plastic depending on clay content, color as above.
190	195	5	200-1,100/0	0-1': Silt. As above.
				1-1.3': Clay. Red brown (2.5 YR 4/4), platy, fissile, soft to medium stiff, slight plastic, strong HCL reaction.
				1.3-2': Silt. Some clay, medium dense, trace very fine sand, red brown (2.5 YR 4/4).
				2-2.5': Clay. Trace silt, hard, fissile nonplastic, red brown (2.5 YR 4/4).
				2.5-5': Silt. Clayey, trace very fine sand, medium stiff, brown (7.5 YR 4/3) slight to moderate plastic, depending on clay content.
195	200	5	3.5-9/0-0.7	Silt. Clayee, soft to medium stiff, trace very fine sand, moderate plastic in clay zones, brown (7.5 YR 4/4) homogenous. At 2 feet a 2 inch thick red brown clay, fissile, medium stiff, slight plastic, effervescent in HCL.
200	205	5	5-12/0-3.2	Silt. As above.
205	210	5	3.5-5.5/0	Silt. As above.
210	215	5	3-3.5/0	0-5': Silt. As above with clay lense at 4-4.1. Fissile, platy, strong reaction with HCL, medium stiff, reddish brown (5 YR 4/4).

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-13 Page 6 of 9

Prepared by Ted Powell and Ray Flynn

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
215	220	5	2.75-5/0	Silt. Clayey, trace very fine sand, homogeneous, medium stiff, slight to medium plastic, brown (5 YR 4/4).
220	225	5	3-7/0	Silt. As above.
225	230	5	3.5-4.5/0	0-4': Silt. As above.
				4-5': Sand. Silty, some very fine, trace medium, moderate well sorted, medium dense, brown (5 YR 4/4).
230	235	5	5-75/0-3.6	0-1': Silty Sand. As above.
				1-5': Sand. Very fine trace fine, some silt, trace (25 ppm in sand) clay, medium dense, moderate well sorted, red brown (5 YR 5/4). Occasional silt lenses .5 to 1 inch thick, silt with very fine sand, dense. At 4 feet a 6 inch silt seam as above, red brown (5 YR 5/4).
235	240	5	.5-1,000/0	Sand. Very fine trace fine and medium, silty, dense, moderately well sorted, light brown (7.5 YR 6/4). A 1.5 inch thick silt lense at 3.5 feet, moderate stiff.
240	245	5	300-2,000/0	0-1': Sand. As above.
				1-1.7': Silt. With very fine sand, medium stiff, brown (7.5 YR 4/4).
				1.7-3.5': Sand. Very fine, with fine, some silt, moderate well sorted, brown (7.5 YR 4/4).
				3.5-5': Silt. Trace very fine sand, stiff, well sorted, brown (7.5 YR 4/4).
245	250	5	90-325/0	Silt. Stiff to very stiff, very well sorted, color as above, very homogenous.
250	255	5	225-1,225/0	0-1': Silt. As above.
				1-2': Silt. With very fine sand, trace fine and medium in very thin lenses (< 1/16 inch thick) very stiff, color as above.
				2-5': Sand. Very fine with fine, some silt, moderate well sorted light brown (7.5 YR 4/4), dense to medium dense, at 4.9 to 5 feet silt, as above.
255	260	5	100-1,000/0-0.2	0-2.5': Sand. Very fine with silt, medium dense to dense, well sorted, brown (7.5 YR 4/4).
				2.5-5': Silt, with very fine sand, trace clay, soft to medium stiff, color as above.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-13 Page 7 of 9

Prepared by Ted Powell and Ray Flynn

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
260	265	5	200-2,500/0-0.9	0-1': Silt. As above.
				1-5': Sand. With silt to silty, dense, moderate well to well sorted, brown (7.5 YR 4/4).
265	270	5	200-2,500/0-0.3	0-.5': Sand. As above.
				.5-1.5': Sand. Medium with fine, some very fine, trace silt, loose to medium dense, some gravel, subangular to angular, 1/2 to 3/4 inch, brown (7.5 YR 4/4).
				1.5-5': Sand. Very fine to fine, with silt, occassional thin lenses of medium sand, 1/2 to 1 inch thick.
270	275	5	450-2,750/0-0.1	0-1.5': Sand. Fine, some medium, some very fine, trace silt, medium dense, moderate well sorted, color as above.
				1.5-1.8': Silt. With very fine sand, soft to medium stiff.
				1.8-5': Sand. Fine to very fine, occasional zone of medium, very silty in part, dense, color as above.
275	280	5	500-1,750/0	Sand. Very fine with fine, some silt, dense well sorted, brown (7.5 YR 4/4). At 2.5 feet a 2 inch lense of silt, very sandy (very fine sand) soft, color as above.
280	285	5	1,500-4,000/0	Sand. Very fine to fine, trace medium, trace clay within laminae <1 mm, very silty in part, medium dense to dense, moderate well sorted, color, as above.
285	290	5	700-8,500/0-0.2	Sand. Very fine, some fine, some silt, well sorted, dense, brown (7.5 YR 4/4).
290	295	5	1,000-5,500/0	0-.5': Sand. As above.
				.5-.8': Silt. Some very fine sand, trace clay, moderate stiff, brown (7.5 YR 4/3).
				.8-5': Sand. Very fine to fine, variable silt, dense, moderate sorting, color as above. At 3.5 feet a 1/2 to 3/4 inch clay seam, stiff, nonplastic, trace silt, dark brown (7.5 YR 3/4). From 3 to 3.5 feet interbedded sand, very fine, some fine, silt and clay, poorly laminated, clay is very silty, nonplastic. Small lenses of fine to medium sand interspersed throughout.
295	300	5	2,500-5,500/0-0.2	Sand. Very fine to fine, trace to some silt, well sorted, medium dense, brown (7.5 YR 4/4).

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-16

Prepared by Ted Powell and Raymond Flynn

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
55	60	5	2.25/0.8	0-5': Silt. As above with clay lenses at 2 to 2.5', silt very stiff to hard, clay strong reaction with HCL, silt weak to moderate HCL reaction.
60	65	5	2/0	0-5': Silt. As above with clay lenses up to 1/2 inch thick at 2, 2.5 and 5 foot strong HCL reaction in clay. Silt has some clay, moderately weak, HCL reaction.
65	70	5	1.5/8.0	0-1': Silt. As above with clay inclusion soft, saturated.
				1-5': Silt, sandy, soft to medium stiff, saturated, trace clay, brown (10 YR 4/3).
70	75	5	2.75/0.1	1-5': Silt. Sandy, as above, clay lenses coarse to medium, thick in on 2 feet, strong HCL reaction, silt has moderate HCL recovery, medium stiff.
75	80	5	1.5/0	0-5': Silt. Some fine sand, brown (7.5 YR 4/5) clay inclusions up to 1 inch thick in top 2 feet of sample, at approximately 6 inch spacing. Silt, soft moderate to weak HCL reaction, clay, very stiff strong, HCL reacation, platy, reddish brown (5 YR 4/3).
80	85	5	2.25/0.5	0-5': Silt. As above but with much sand, 1/2 inch thick clay from 1.5 to 5.0 approximately every 8 inchs, strong HCL reaction in clay, weak to moderate in silt.
85	90	5	4.5/0.1	0-1.5': Clay. As in sample above but very hard. Strong HCL reaction layers of silt approximately 20 percent.
				1.5-5.0': Silt. Medium stiff with 1/4 inch lenses of clay as above. Saturated, moderate to weak HCL reaction brown (7.5 YR 5/4). Silt becomes more sandy toward base.
90	95	5	5.0/1.2	0-1': Silt. Sandy, interbedded with clay as above. Moderate HCL reaction medium stiff brown (7.5 YR 5/4) clay, strong HCL reaction.
				1-2.5': Sand. Fine with silt grading up to 50% clay in 3 distinct sequences, very fine, very thin laminae in silt, sand satured loose, silt medium stiff, clay stiff, sand brown (7.5 YR 4/3). Silt and clay same as above, silt contains lesser amounts brown (7.5 YR 4/2).
				2.5-4.8': Sand. Fine, loose, saturated, no HCL reaction, red brown (5 YR 5/4).

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-16

Prepared by Ted Powell and Raymond Flynn

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				4.8-5.0': Sand. Silty with clay, 2 cycles, each approximately 0.1" thick, properties as in 1-2.5 foot interval.
95	100	4.5	2/0.1	0-1': Sand. Fine with much silt, loose, saturated, possible slough.
				1-2': Sand. With much silt, grading to clay, 3 mm thick, deposits as at base of 90 to 95 feet interval.
				2-4.5': Sand. Fine to medium with some to much coarse sand, loose, very well sorted, saturated.
100	105			No HCL reaction, brown (7.5 YR 5/4), trace fine gravel, subrounded.
105	110	1	15/0.9	0-1': Sand. As above, saturated.
				Set up to collect groundwater Grab Sample GBGM-16/115.
110	115			No recovery. Assumed sand as above which fell out on withdrawal, no catcher in barrel, water sample 110 to 115.
115	120		6/0	0-2': Sand. Fine to medium with much coarse sand, loose, saturated, brown (7.5 YR 5/4) some to much fine and coarse at 1.5 to 2.0'.
				2-5': Silt and Clay. With much clay in distinct layers, approximately equal amounts silt, medium stiff, reddish brown (5 YR 4/3). Moderate HCL reaction in clay. Platy, hard, strong HCL reaction, reddish brown (2.5 YR 4/3).
120	125	5	3.5/0	Silt to Clay. As above with clay at 1.5 feet (layer 1 inch thick). Silt and clay contain trace subangular to subrounded gravel up to 1 inch in diameter, matrix supported.
125	130	5	8.5/0.4	0-1': Silt. With clay as above. Medium stiff.
				1-3': Silty Clay. With 5 inch silt layer, as 0-1'. At 2.0 feet clay, stiff, strong HCL reaction, reddish brown (5 YR 4/3).
				3-5': Silty Clay. Diamict. Fine and coarse gravel, very stiff, gravel is variable in composition, subrounded to subangular. Matrix reddish brown (5 YR 4/3) moderate HCL reaction.
130	133	3	4/0.3	0-1.5': Clay and Gravel. Diamitic, silty, as above.
				1.5-2': Silty Clay. With some fine and coarse gravel, hard, moderate HCL reaction.
				2-3': Silty Clay. Diamictic as 0-1.5 with some sand very stiff.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-16

Prepared by Ted Powell and Raymond Flynn

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
133	140	7.5	12/2.9	0-7': Gravel. Diamictic, silty as above, but grave more abundant hard. Gravel subangular to angular, coarse gravel abundant, predominately slate (3 GLEY 5/1/10G). Silt dark reddish brown (5 YR 3/2). Moderate to strong HCL reaction, Sate
				becomes more abundant with depth. Proportion of non-slate gravel, decreases with depth.
140	144	4	7/1.9	0-2': As above.
				2-5': Rock. Pulverized to very angular unimodal slate and gravel, becomes coarser to base of sample, moderate HCL reaction. Greenish grey (GLEY 5/1/10GM) driller believes competent bed rock to be at 141 ft bgs.

SAMPLE/CORE LOG (Cont.d)

Boring/Well GM-17

Prepared by Ted Powell

From (feet)	To (feet)	Core Recovery (feet)	OVA/OVM (ppm)	Sample/Core Description
				3-5': Sand. Very fine, very silty (approximately 45 percent) trace fine, dense, well sorted, color as above.
120	125	5	1.5-4.5/0	0-2': Sand. Very fine silty, to very fine sandy silt, gradational along section, dense, trace clay, some clay inclusions. Red (2.5 YR 5/6) plastic, soft, platy to blocky in part.
				2-5': Silt. With very fine sand and small (.5 to 1 inch) pockets/lenses very fine to medium sand, silt soft to medium stiff, strong brown (7.5 YR 5/6) no reaction to acid, trace clay.
				Set up to purge temp well and collect groundwater grab sample GBGM-17/105.
125	130	5	2.0/0	0-2': Sand. Very fine silty, trace fine, medium dense, trace clay, grades to very fine sandy silt in part, moderately well sorted.
				2-3': Silt. With very fine sand, trace clay brown (7.5 Yr 5/4) moderately stiff inclusions/lenses approximately 1/4 inch thick, red (2.5 YR 5/8) soft moderately plastic.
				3-5': Silt. Very clayee in part, some very fine sand, where clayee soft, moderately plastic to plastic, brown (7.5 YR 5/4), abundant red clay inclusions, medium stiff, fissile, slight reaction in HCL.
130	135	5	1.75 -2/0	0-1': Silt. As above.
				1-4': Sand. Very fine silty, trace clay, dense, moderately well sorted.
				4-4.5': Silt with very fine sand, dense to medium stiff, very clayee in part, moderate plastic where clayee, brown (7.5 YR 5/4).
				4.5-4.8': Sand. Very fine, trace fine, with silt, medium dense, well sorted, color as above.
				4.8-.5': Silt. With very fine sand, trace clay, medium stiff, brown (7.5 YR 5/4).
130	140	5	1.75-2/0	0-2.5': Silt. With very fine sand, trace clay, soft, trace fine sand, trace red clay inclusions approximately 1/4 inch thick, fissile, medium stiff, moderately plastic, moderate reaction in HCL, silt brown (7.5 YR 5/4).
				2.5-3.5': Sand. Silty very fine, some fine, moderately well sorted, medium dense, color, as above.
				3.5-5.': Silt. With clay (variable) moderately plastic, medium stiff to soft. Occasional red clay inclusions, red (2.5 YR 5/8) fissile and small very fine to fine sand lenses throughout.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
0	5	5	3-10/0.0	0.0-8.0": Top Soil. Dark brown (10 YR 3/3), sandy silt loam, abundant rootlets,
				dry and crumbly. No HCl reaction.
				8.0"-1.5': Silt. Strong brown (7.5 YR 4/6), sandy, abundant very fine sand, crumbly,
				no HCl reaction, dry.
				1.5-3.0': Sand. Strong brown (7.5 RY 4/6), fine to very fine, some silt, trace coarse
				sand and granular gravel, loose, no HCl reaction. Coarser at base.
				3.0-5.0': Sand. Brown (10 YR 4/3), with gravel, fine to very fine sand with abundant
				granular gravel, some pebble gravel, loose. Pebbles subangular to subrounded,
				variable composition, up to 2½ inch diameter.
5	10	5	2.5-3.0/0.0	0.0-1.0': Sand. With gravel as above.
				1.0-3.5': Sand. Yellowish red (5 YR 5/6), medium, with trace to some coarse sand
				at base (lowest 1 foot), very well sorted. Loose, no HCl reaction.
				3.5-5.0': Sand and Gravel. Dark brown (7.5 YR 3/4), very coarse, some medium and
				trace fine sand. Gravel: Granule to cobble sized, variable composition, subangular
				to well rounded, loose and dry.
10	15	5	2.5-3.0/	0.0-3.0': Sand and Gravel. As above, becoming gravel with sand in lowest 1
			0-0.3	foot. Mainly pebble gravel at base.
				3.0-5.0': Silt and Sandy Silt. Strong brown (7.5 YR 4/6), very thinly laminated,
				HP = 1.5, slight to no HCl reaction, trace to some clay laminations (approximately
				every 3 to 4 inches) weak red (10.2 4/4), foliated, slightly plastic, no HCl reaction,
				laminations up to 1/8 inch thick.
15	20	6	10-40/0-0.7	0.0-6.0': Silt, and sandy silt as above, yellowish brown (10 YR 5/4), moderate HCl
				reaction. Trace to some clay inclusions as above, but HP to 1½ inch thick. Very

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
				fine sand lense at 3 to 3.5 feet. Trace to some silt, crumbly, slight HCl reaction.
				Clay inclusions more abundant and clay has strong HCl reaction. HP > 4.0.
20	25	6.5	20-1,250/	0.0-5.5": Silt and Clay. As above. Units finely bedded and in approximate
			0-0.4	equal amounts.
				5.5-6.5": Silt and Clay. Reddish brown (2.5 YR 2.5/4) as above, clay dark reddish
				brown. Silt and clay in approximate equal amounts. Clay strong HCl reaction.
				Silt slight HCl reaction.
25	30	5	2,000/	0.0-1.0': Sand and Gravel. Dark red brown (5 YR 3/5), silty, coarse to very fine
			9,000/0.0-	sand. Pebble and granular gravel, some cobbles, slough.
			0.6	1.0-2.0': Silt. Reddish brown (5 YR 4/4), trace well rounded, matrix supported
				pebbles, HP = 2.0, strong HCl reaction.
				2.0-3.5': Sand. Reddish brown (5 YR 4/4), fine, silty, strong HCl reaction, crumbly,
				nonplastic, HP = 1.0, much very fine sand.
				3.5-5.0': Sand. Light reddish brown (5 YR 6/4), very fine, loose, dry, very well
				sorted, slight to moderate HCl reaction.
30	35	5	1,000-	0.0-1.0': Sand. Dusky red (2.5 YR 3/2), medium to very coarse, slightly silty, trace
			>10,000/	pebble gravel, slough.
			0-0.9	1.0-2.0': Sand. Reddish brown (2.5 YR 4/4), fine, trace granular gravel becoming
				more abundant at base, dry, well sorted, loose. No HCl reaction.
				2.0-3.0': Sand. Reddish brown (5 YR 4/4), fine to medium, well sorted, loose,
				no HCl reaction.
				3.0-3.5': Sand and Gravel. Reddish brown (5 YR 5/3), very fine to very coarse sand,
				granular to cobble gravel of variable composition, subangular to well rounded,
				slight to moderate HCl reaction, dry, loose.
				3.5-5.0': Sand. Light red brown (5 YR 6/4) at top, reddish brown (5 YR 4/4) at base, fine
				sand grading down into medium. Top: fine sand, light red brown, with some
				coarse sand and trace to some silt. No HCl reaction, dry and loose. Base: Medium to
				coarse sand. Some fine sand, trace granular gravel. No HCl reaction, loose.
				Contains calcareous concretions (nodules) of sand with calcite cement.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
35	40	5	4,500/	0.0-1.0': Sand. Brown (7.5 YR 5/3), coarse to medium, much fine sand, some
			0.0-1.9	granular gravel, loose, no HCl reaction.
				1.0-2.0': Granular Gravel. Dark reddish brown (5 YR 3/4), with much sand,
				predominately very coarse to some coarse and medium, some subrounded
				pebbles, (variable composition), loose.
				2.0-3.5': Sand. Very dark brown (7.5 YR 2.5/3), very coarse with some gravel, trace
				silt, some to much medium sand, mainly pebble gravel, variable composition,
				subangular to subrounded.
				3.5-4.0': Sand. Coarse with some granular gravel, strong brown (7.5 YR 4/6)
				much very coarse sand, loose, no HCl reaction.
				4.0-5.0': Sand and Gravel. Pinkish gray (7.5 YR 6/2), coarse to very coarse, much
				medium, fine and very fine sand, some silt, dry, moderate HCl reaction, loose.
				Gravel subrounded to well rounded, variable composition up to 1 inch diameter.
40	45	4.5	200-5,000/	0.0-0.5': Sand and Gravel. As above.
			0-2.1	0.5-5.0': Silt. Reddish brown (2.5 YR 4/4), HP = 2.0, some very fine sand, nonplastic,
				slight HCl reaction, trace to some clay inclusions . Clay, dark red (2.5 YR 3/6),
				foliated, moderate HCl reaction, HP = 2.0.
45	50	5	5-30/0-0.2	0.0-5.0': Silt. As above, 0.5 inch clay inclusions, dark red brown (5 YR 3/4), at 4.5
				feet, moderate HCl reaction.
50	55	5	5-50/0-0.2	0.0-5.0': Silt. As above, trace to some clay inclusions in top 3 feet.
55	60	5	2-5/0-0.2	0.0-5.0': Silt. As above. HP = 2.5, slight HCl reaction, trace clay inclusions.
60	65	5	2-4/0.0	0.0-5.0': Silt. As above, trace clay inclusions.
65	70	5	15-3,500/	0.0-5.0': Silt. As above.
			0.0	
70	75	5	3,000-	0.0-0.5': Silt. As above.

				very wet, loose, well sorted, no HCl reaction. Silt: very dark gray (10 YR 3/1),
				moderate HCl reaction. HP ≥4.0.
				1.0-2.0': Sand. As above without silt.
				2.0-4.0': Sand. Reddish brown (5 YR 4/3), fine, loose, slightly dense, crumbly, very

From	To	(feet)	OVA/OVM	Sample/Core Description
				well sorted. No HCl reaction.
				4.0-4.5': Silt. Strong brown (7.5 YR 4/6), thinly laminated with some clay lenses,
				HP > 4.0, slight to moderate HCl reaction.
				4.5-5.0': Sand. Dark yellow brown (10 YR 4/6) coarse, some medium sand, trace
				very coarse sand, loose, no HCl reaction.
75	95	10	150-2,500/	0.0-7.0': Sand. Reddish brown (5 YR 5/4), coarse, some to much medium sand,
			0.0	loose, trace gravel, no HCl reaction.
				7.0-7.5': Sand and gravel. Deep red (2.5 YR 4/2), coarse to very coarse, some coarse
				and medium, granular and fine pebble gravel, subangular to well rounded,
				variable composition, loose. No HCl reaction.
				7.5-9.0': Sand. Deep red (2.5 YR 4/2), coarse with some gravel, loose, gravel as
				above.
				9.0-10.0': Silt. Reddish brown (5 YR 4/4), HP = 3.0, moderate HCl reaction.
95	100	5	30-1,000/	0.0-5.0': Silt. As above, clay inclusion at 2.5 feet.
			0.0	
100	105	5	300->10,000/	0.0-3.0': Silt. As above, with some clay inclusions.
			0.0	3.0-4.0': Sand. Reddish brown (5 YR 4/4), very fine, silty, HP = 1.5, moderate HCl
				reaction, cohesive, nonplastic.
				4.0-5.0': Sand. Reddish brown (5 YR 4/4), fine to very fine, well sorted, slight HCl
				reaction, loose.
105	115	7	1,000-	0.0-7.0': Sand. Reddish brown (5 YR 5/4), medium grading to medium to coarse
			7,000/0.0	sand with depth, well sorted, loose.
115	120	5	≤2.0/0.0	0.0-5.0': Silt. Reddish brown (5 YR 4/4), variable very fine sand content (trace to
				much), HP = 2.0-2.5, slight to moderate HCl reaction, clay inclusions toward base.
120	125	5	<2.0/0.0	0.0-5.0': Silt. Reddish brown (5 YR 4/4), with much sand to sandy silt. HP = 1.0 to
				1.5, slight HCl reaction.
125	130	5	≤2.0/0.0	0.0-5.0': Silt. Sandy, with fine silty sand at base.
130	135	5	5-30/0.0	0.0-2.0': Silt. Reddish brown (5 YR 4/4), HP = 2.0. No HCl reaction.
				2.0-5.0': Sand. Reddish brown (5 YR 4/4), very fine, silty, dry, crumbly, HP =
				1.0 to 1.5. No HCl reaction.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
0	5	5	7.0/0.5	0-0.5': Silt. Dark reddish brown (5 YR 3/3). some fine sand, trace rootlets,
				damp, HP = 1.0.
				0.5-2.0': Sand. Fine, brown (7.5 YR 5/3), some to much gravel in 1.0 to 2.0,
				loose, damp, variable composition, gravel.
				2.0-5.0': Sand. Silty, reddish brown (2.5 YR 4/4) HP = 0.7, very moist to
				saturated, trace angular gravel. No HCl reaction, some to much rounded
				gravel from 4.0 to 5.0.
5	10	5	10/0.0	0-1.5': Clay. Silty, red (10 R 5/6) finely interbedded with silt. Reddish brown
				(5 YR 5/4) with some to much fine sand. HP clay = 1.25. HP silt = 2.0
				saturated, clay strong HCl reaction. Silt weak HCl reaction. Silt very finely
				laminated.
				1.5-5.0': Silt. As above, but brown (7.5 YR 4/3) HP = 1.0. Saturated, no
				HCl reaction.
10	15	5	700/0.0	0-2.0': Silt. As above, saturated, interbedded with clay, reddish brown,
				(2.5 YR 4/4) strong HCl reaction. Silt/clay laminations thick to thinly laminates.
				HP clay = 1.5. HP silt = 1.0. clay is fissile and plastic.
				2.0-5.0': Clay/Silt. As above, clay reddish brown (5 YR 4/4) thin laminations
				of fine to medium sand, lowest ½ foot (4.5 to 5.0).
15	20	5	3,500/0.3	0-2.0': Silt. As above, saturated but very soft. HP = 0.0.
				2.0-3.0': Silt. Reddish brown (2.5 YR 4/4) with thin clay laminations above,
				strong HCl reaction. Coarsening down to silt, gray (5 YR 5/1) very finely
				laminated. No HCl reaction with sand laminations, reddish brown (5 YR 5/3)
				3.0-3.5': Sand. Reddish brown (5 YR 5/3). Fine to medium sand, very
				well sorted. No HCl reaction, loose.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
				3.5-5.0': Sand and Gravel. Brown (7.5 YR 5/4) loose, saturated. Medium to
				coarse sand with granule to cobble sized variable composition, well rounded
				to subrounded. No CH4 at drill floor, 4 ppm (background).
20	25	1.5	4,000/0.3	0-0.5': Sand and Gravel. As above, saturated.
				0.5-1.5': Sand. Coarse, with some to much gravel, brown (7.5 YR 5/3)
				loose, saturated gravel, granule to cobble sized, subangular to subrounded,
				variable compostion.
25	30	5	>10,000/2.7	0-0.5': Sand. Coarse, saturated, as above.
				0.5-2.0': Sand. Medium to coarse, brown (7.5 YR 5/3) loose, saturated, no
				HCl reaction.
				2.0-5.0': Sand. Fine to medium, brown (7.5 YR 5/4) loose, very well sorted,
				saturated, trace well rounded pebble gravel.
30	35	5	>10,000/5.0	0-1.5': Sand. Fine to medium, as above, slightly coarser with some gravel
				(cobbles) at 1.5 feet.
				1.5-5.0': Silt/Clay. Interbedded in approximately equal amounts, clay
				reddish brown (2.5 YR 4/4) platy, plastic, strong HCl reaction. HP = 2.3, silt
				reddish brown (5 YR 4/3). HP = 2.2, saturated.
35	40	5	8,000/0.0	0-3.0': Sand. Silty very fine sand, reddish brown (5 YR 4/3) very well sorted.
				HP = 1.0, saturated.
				3.0-3.1': Clay. Reddish brown (5 YR 4/4) strong HCl reaction, plastic,
				platy.
				3.1-5.0': Sand. Silty, as above, becoming fine sand at base.
40	45	5	>10,000/0.1	Sand. Fine, reddish brown (5 YR 5/3), saturated, very well sorted, slightly firm.
45	50	5	3,500/0.5	0-3': Sand. Fine, reddish brown (5 YR 5/3) very well sorted, trace to some
				silt, slightly firm, saturated.
				3-3.2': Silt. Brown (7.5 YR 5/3) slightly plastic, HP = 1.1.
				3.2-5.0': Sand. Fine, as 0 to 3 but reddish brown (5 YR 5/4) very well
				sorted, saturated.
50	55	5	9,500/1.5	0-1.0': Sand. Fine, as above, saturated.
				1.0-2.0': Silt. Brown (7.5 YR 4/3) HP = 0.2, some to much fine sand. No
				HCl reaction.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
				2.0-5.0': Sand. Fine, reddish brown (5 YR 4/3) very well sorted, loose, very
				damp to saturated, very finely laminated with black laminations 53 to 54 feet.
55	60	5	8,000/3.8	0-0.5': Sand. As above.
				0.5-1.5': Silt. Brown (7.5 YR 4/3). HP = 0.7, saturated. No HCl reaction,
				slightly plastic.
				1.5-2.5': Sand. Silty, reddish brown (5 YR 4/3) saturated, HP = 0.1.
				2.5-3.0': Sand. Fine, reddish brown (5 YR 5/4) firm, trace to some silt, very
				well sorted, saturated, no HCl reaction.
				4.0-5.0': Sand. Silty, very fine sand, reddish brown (5 YR 5/4). HP = 0.3,
				very well sorted.
60	65	5	7,000/8.1	0-3': Sand. Silty, as above.
				3-5': Silt, reddish brown (5 YR 4/3) saturated, trace laminations and very fine
				sand HP = 0.7. No HCl reactions.
65	70	5	2,500/4.1	0-1.5': Silt. Brown (7.5 YR 4/3) saturated, with much sand. HP = 0.1. No HCl
				reaction.
				1.5-5.0': Sand. Fine, brown (7.5 YR 4/3) trace silt, slightly cohesive, very
				well sorted, saturated.
70	75	5	7,000/6.9	0-2': Sand. Fine, as above.
				2-3': Silt, dark brown (7.5 YR 3/2) HP = 0.6, saturated, slight HCl reaction.
				3-5': Sand. As 0 to 2.
75	80	5	4,000/4.8	0-1': Silt. Very fine sand, brown (7.5 YR 4/3) some to much medium to
				coarse sand.
				1-5': Silt. Very fine sand, as above, with no medium to coarse sand, very
				well sorted. HP = 0.2, moderate HCl reaction.
80	85	5	9,500/7.2	0-2': Silt. Very fine sand, as above.
				2-3.5': Silt. Dark brown (7.5 YR 3/3) saturated, moderate HCl reaction. HP =
				0.75.
				3.5-5': Silt. Very fine sand, as 0 to 2, saturated.
85	90	5	>10,000/5.4	0-1.5': Sand. Silty, brown (7.5 YR 4/3), no HCl reaction, saturated HP = 1.25.
				1.5-2.5': Sand. Fine, brown (7.5 YR 4/3) very well sorted, slightly dense.
				2.5-4.9': Sand. Fine to medium, brown (7.5 YR 5/3) loose, very well sorted,
				saturated.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
				4.9-5.0': Silt. Brown (7.5 YR 4/3) HP = 0.25, saturated, slight HCl reaction.
90	95	5	4,000/6.3	0-5': Silt. As above with silty sand seam 4 to 4.1 feet. Silt HP = 1.2, with
				trace angular gravel, weak HCl reaction.
95	100	5	8,000/4.6	0-2': Silt. Brown (7.5 YR 4/3) some to much very sand saturated HP = 0.0.
				No HCl reaction.
				2-3': Sand. Silty, reddish brown (5 YR 4/3) some clay, saturated. HP = 0
				very soft.
				3-5': Sand. Fine to medium, brown (7.5 YR 4/2) very well sorted, saturated,
				some silt.
100	105	5	>10,000/2.2	0-5': Sand. As above, becoming medium sand with depth, trace coarse
				sand and some silt, medium sand, brown (7.5 YR 4/2) as above, saturated,
				no HCl reaction.
105	110	5	>10,000/3.6	0-4.5': Sand. Medium, as above.
				4.5-5.0': Sand. Medium, as above, with clay lense approximately 0.5 inch
				thick, strong HCl reaction, saturated.
110	115	5		0-1.5': Sand. Fine, reddish brown (5 YR 5/4) very well sorted, trace silt,
				loose, saturated.
				1.5-4.0': Silt. Reddish brown (5 YR 4/3) saturated, moderate HCl reaction.
				HP = 0.5.
				4.0-4.3': Clay. Reddish brown (2.5 YR 4/4) strong HCl reaction, platy and
				plastic, damp, HP = 2.0.
				4.3-5.0': Sand. Fine, brown (7.5 YR 5/3) some silt, no HCl reaction, very
				damp.
				Water sample requested from 105 to 110 feet bgs.
115	120	5	6,000/2.0	Sand. Fine, brown (7.5 YR 4/3) some silt, saturated, trace to some medium
				sand, soft, no HCl reaction.
120	125	5	>10,000/3.3	Sand. Fine, as above, with much silt at base, trace pebbles.
125	130	5	>10,000/5.5	Sand. Fine, as above.
130	135	2	>10,000/4.4	0-1.5': Sand. Fine, as above.
				1.5-2.0': Sand. Fine with lenses (<1 cm) of silt, reddish brown (5 YR 4/3).

ARCADIS GERAGHTY & MILLER

Sample/Core Log (Cont.d)

Boring/Well GM-25 A/B/C

Prepared by Ray Flynn and Dan Hegrenes

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
				Moderate HCl reaction in silt, loose, very moist, (due to drilling method).
135	140	5	>10,000/3.0	Sand. Fine, brown (7.5 YR 4/3) loose, saturated, well sorted, trace to some
				fine gravel, becoming more abundant toward base.
140	145	5	>10,000/2.1	0-1': Sand. fine, as above.
				1-2": Silt. Brown (7.5 YR 4/2) moist HP = 1.0. Moderate HCl reaction, clay
				lense at base, reddish brown (5 YR 4/3), platy, plastic, strong HCl reaction.
				HP = 0.5.
				2-5': Sand. Fine as 0 to 1 foot, slightly coarser, fine to medium, toward base
				with trace to some fine gravel.
145	150	5	>10,000/2.1	0-1.5': Sand. Fine to medium , as above, with some coarse sand and some to
				much well rounded fine gravel, saturated, loose.
				1.5-3.0': Sand. Fine, brown (7.5 YR 5/3) well sorted, loose, saturated.
				3.0-5.0': Silt. Brown (7.5 YR 4/2) HP = 0.5, weak HCl reaction, saturated.
150	155	5	>10,000/3.0	0-1.0': Silt. As above.
				1.0-2.0': Silt, very fine sand, brown (7.5 YR 5/3). HP = 0.1, no HCl reaction
				saturated, very well sorted.
				2.0-2.5': Clay. Dark reddish brown (5 YR 3/3). HP = 1.5, moderate HCl
				reaction, platy, crumbly, damp.
				2.5-5.0': Sand. Medium to coarse, brown (7.5 YR 4/2) saturated, trace fine
				gravel, loose.
155	160	5	4,500/0.5	0-2': Sand. Medium to coarse, brown (7.5 YR 4/2) saturated, loose, trace silt,
				some fine sand.
				2.0-3.5': Silt. Brown (7.5 YR 4/3) saturated, very soft, no HCl reaction.
				3.5-4.0': Sand. Coarse, brown (7.5 YR 4/2), loose, saturated.
				4.0-5.0': Silt. Brown (7. 5YR 4/3) very saturated, HP = 0.2, no HCl reaction,
				capped by 1 inch lense of silty clay, dark reddish grey (5 YR 4/2) HP = 0.4,
				moderate, HCl reaction.
160	165	5	>10,000/1.6	Silt. As above with clay lenses at 2.5 and 5.0 feet, clay in 159.5 to 160
				interval.
165	170	5	8,000/0.8	0-0.5': Silt. As above.
				0.5-1.5': Sand. Silty/sandy silt, brown (7. 5YR 5/2) saturated, HP = 0.4,
				no HCl reaction.

Sample/Core Log (Cont.d)

Boring/Well GM-25 A/B/C

Prepared by Ray Flynn and Dan Hegrenes

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
				1.5-3.0': Silt. Very fine sand, brown (7.5 YR 5/2) slightly cohesive,
				saturated, very well sorted, no HCl reaction.
				3.0-5.0': Silt. Brown (7.5 YR 5/2) saturated, HP = 0.7, no HCl reaction,
				grains barely visible, very well sorted.
170	175	5	3,500/1.8	0-1.0': Silt. Very fine sand, brown (7.5 YR 5/2) no HCl reaction very well
				sorted, saturated.
				1.0-1.5': Sand. Fine, reddish brown (7.5 YR 4/3) loose, saturated, very well
				sorted.
				1.5-5.0': Silt. Very fine sand, as 0 to 1.0 interval, very damp, (drilling
				artifact).
175	180	5	2,500/0.0	0-5': Silt. Brown (7 R 4/3) saturated very soft, trace fine sand. HP = 0.1.
180	185	5	8,000/1.2	0-5': Silt. As above, weak HCl reaction. Clay lense (1.5 inch) at 4.8, clay,
				reddish brown (5 YR 4/3) strong HCl reaction. HP = 2.0
185	190	5	1,500/0.2	0-3': Silt. As above.
				3-5': Silt. Very fine sand, brown (7.5 YR 4/2) very well sorted, saturated,
				HP = 0.5, weak HCl reaction. Occasional clay lenses <¼ inch , as above.
190	195	5	1,500/1.6	0-1': Silt. Very fine sand, as above.
				1-2': Sand. Fine, brown (7.5 YR 4/2) very well sorted, loose, saturated.
				2-3': Clay. Silty, brown (7.5 YR 4/2) moderate HCl reaction, HP = 3.0.
				3-5': Boulder. Slate, metamorphic with abundant augening, horizontal
				foiliations, suggest not bedrock but boulder since bedrock foliation typically
				vertical, No HCl reaction.
195	200	5	1,700/0.5	0-1': Sand. Fine, dark grey (7.5 YR 4/1) well sorted, medium dense, (drilling
				artifact) saturated.
				1-2': Sand and Gravel. Very dark grey (7.5 YR 3/1), poorly sorted, gravel,
				variable composition, subangular to subrounded.
				2-5': Clay. Silt, dark reddish brown (5 YR 3/2) HP = 4.0, diamictic.
				Abundant matrix supported gravel (approximately 30 percent). No HCl
				reaction, saturated.
200	205	5	900/0.4	0-1': Diamictic silty clay, as above.
				1-5': Sand. Fine to medium, brown (7.5 YR 4/2) moderate sorting, trace
				fine gravel, some to much coarse sand. No HCl reaction, loose, saturated.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
0	5	3½	15-2,500/	0-2.5': Sand. Fine, yellowish red (5 YR 4/6) loose, trace silt, trace to some
			0.4-1.8	well rounded, variable composition gravel.
				2.5-3.5': Silt. Dark brown (7.5 YR 3/4) trace fine sand, no HCl reaction.
				HP = 1.5, dry and crumbly.
5	10	4½	100-500/0.2-	0-0.5': Silt. As above, with seams of very fine sand. Much black staining,
			1	silt and sand approximately equal amounts sand, olive brown (2.5 YR 4/3).
				0.5-1.5': Silt. Brown (7.5 YR 5/4) HP = 1.0, very moist. No HCl reaction, clay
				lenses = 1/8 inch thick. Every 4 inches toward base of sample, platy and
				plastic, slight HCl reaction.
10	15			No reaction.
15	20	1.5	25-30/0.7-0.9	0-1.0': Silt. Dark brown (7.5 YR 3/4) HP = 0.2, very plastic, strong reaction
				with HCl.
				1.0-1.5': Boulder in base of barrel.
20	25	0		No recovery.
25	30	5	2.5-8.0/	0-5.0': Silt. With clay inclusions. Silt, dark brown (7.5 YR 3/4) slight clayey.
			0.4-0.8	HP = 1.7 slight plastic, no HCl reaction. Clay reddish brown (7.5 YR 4/4).
				HP = 3.7, platy, fissile, strong HCl reaction, inclusions, most abundant toward
				base, (lowest 1 foot) of sample.
30	35	5	7.5-10/0.4-	0-1.0': Silt. With clay as above.
			0.6	1.0-3.0': Silt. As above, with clay inclusion at 2.7, strong HCl reaction. Dark
				reddish brown (5 YR 3/3).
				3.0-5.0': Sand. Fine to very fine, dark brown (7.5 YR 3/4) loose to slightly
				dense, trace to some silt.

Boring/Well GM-28 A/B

Prepared by Ray Flynn and Pat Bartnik

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
35	40	5	225-6000/	0-2.0': Sand. Fine to very fine, as above, clay inclusions.
			0.3-0.8	2-2.5': Sand. Medium, brown (7.5 YR 4/4) loose, well sorted.
				2.5-3.0': Sand. Medium to coarse, brown (7.5 YR 4/4) loose, well sorted,
				coarse rounded gravel at base.
				3.0-5.0': Gravel. Brown (5 YR 4/4) granular gravel, variable composition,
				subangular to rounded. Some gravel up to cobble size. Some coarse to fine
				sand, trace silt.
40	45	1.5	>10,000/1.0	0-1.1': Gravel. As above.
				1.1-1.5': Sand. Medium, brown (5 YR 4/4) trace to some variable composition,
				rounded granular gravel.
45	50	4½	150->10,000	0-3.0': Gravel. Very sandy, reddish brown (5 YR 4/4) with much sand.
			1.3-1.5	Predominantly granular gravel and coarse sand, gravel up to 3.5 centimeters
				in diameter, variable composition, subrounded to well rounded. Some medium
				and fine sand.
				3.0-4.5': Sand. Medium, reddish brown (5 YR 4/4). Some to much coarse
				sand, trace to some fine gravel.
50	55	0.0		No recovery.
55	60	5	100-1,000/	0-1.2': Gravel. Reddish brown (5 YR 4/4) granular gravel with some pebbles,
			0.6-1.2	variable composition, subangular to subrounded. Some to much coarse
				sand. Trace to some silt, gravel coarsest at base.
				1.2-5.0': Sand. Very fine, silty, reddish brown (2.5 YR 4/4) weak to moderate
				HCl reaction. HP = 0 to 0.3, very silty, well sorted.
60	65	5	100-1,000/	0-1.5': Sand. Very fine, silty, as above.
			0.6-1.2	1.5-3.0': Silt. Reddish brown (5 YR 4/3) HP = 1.3, strong to moderate HCl
				reaction.
				3.0-5.0': Sand. Very fine, silty, reddish brown (5 YR 4/4), as 0 to 1.5.
65	70	5	70-600/	0-3.0': Sand. Very fine, silty, as above.
			0.5-1.1	3.0-4.5': Silt. Reddish brown (5 YR 4/4) moderate to strong HCl
				reaction, HP = 0.6
				4.5-5.0': Sand. Very fine, silty, as 0 to 3 feet.
70	75	5	300-900/	0-3.0': Sand. Very fine, silty, as above.
			6.6-1.4	3.0-4.0': Sand. Fine, reddish brown (5 YR 5/4), loose, very well sorted.
				4.0-5.0': Sand. Very fine, silty, as 0 to 3 feet.

Boring/Well GM-30

Prepared by Ray Flynn and Pat Bartnik

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
				gravel 2 millimeter to 1.5 inches, subrounded.
				1.0-2.0': Silt. Light brown (7.5 YR 6/4) sandy, fine to very fine, trace gravel.
				2.0-3.0': Sand. Reddish yellow (7.5 RY 6/6) very coarse to very fine, silty, gravely
				very poorly sorted, 2 millimeter to 2 inches, subrounded, dry.
				3.0-5.0': Gravel. Light yellowish brown (2.5 YR 6/4) 2 millimeter to 2 inches
				subangular to subrounded, sandy very coarse to fine, very poorly sorted, dry.
				5.0-6.0': Sand. Light brownish gray (2.5 YR 6/2) very coarse, trace very fine,
				silty, gravely 2 millimeter to 2 inches, subrounded, very poorly sorted, dry.
25	30	5.0	3-17/0-0	0-2.0': Gravel. Light olive brown (2.5 Y 5/3) 2 millimeter to 2.5 inches,
				subanuglar to subrounded, sandy, very coarse to very fine silt, very poorly sorted,
				wet.
				2.0-3.0': Sand. Brown (7.5 YR 4/4) fine to very fine, silty, gravely 2 to 20
				millimeter, subrounded.
				3.0-5.0': Sand. Brown (7.5 YR 4/4) very coarse, to very fine, silty, gravely
				2 to 70 millimeter, subangular to subrounded, very poorly sorted, dry.
30	35	5	3-25/0-0	0-2.5': Sand. As above.
				2.5-4.0': Sand. Pale brown (10 YR 6/3) very coarse to medium, gravely
				2 to 50 millimeter, subangular to subrounded, trace fine sand, dry.
				4.0-4.2': Sand. Pinkish red (7.5 YR 6/2) very fine, silty, well sorted, dry.
				4.2-5.0': Silt. Light brown (7.5 YR 6/4) sandy, very fine, trace clay, slight
				reaction with HCl.
35	40	5	15-65/0-0	0-0.5': Silt. Yellowish red (5 YR 4/6) very fine, sandy, gravely HP = 3.1,
				moderate reaction HCl.
				0.5-1.0': Boulder. Shattered, Michagme slate.
				1.0-4.0': Sand. Reddish yellow (7.5 YR 6/6) fine to very fine, silty, gravely
				2 millimeters to 2 inches, subangular to subrounded.
				4.0-5.0': Silt. Reddish brown (7.5 YR 4/4) compact dry, with clay laminae, red
				(2.5 YR 4/6) strong reaction with HCl, HP = 1.0.
40	45	5	7-40/0-0	0-1.0': Sand. As above, but trace very fine sand and no clay laminae.
				1.0-2.5': Silt. Reddish brown (7.5 YR 4/6) sandy, very fine, gravely
				2 millimeters to 3 inches, subrounded, dry.

Boring/Well GM-30

Prepared by Ray Flynn and Pat Bartnik

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
				2.5-3.5': Sand. Reddish brown (5 YR 4/4) fine to very fine, silty, very well
				sorted, dry.
				3.5-5.0': Silt. Reddish brown (2.5 YR 5/3) trace very fine sand.
45	50	5	2-6/0-0	0-5.0': Sand. Brown (7.5 YR 4/4) very coarse to very fine, silty, gravely 2
				millimeters to 2 inches, subrounded, trace clay, with clay balls, red (2.5 YR 5/6)
				blocky to laminated, slight reaction to HCl.
50	55	5	2-3/0-0	0-2.0': Clay. Dark grayish brown (2.5 Y 4/2) HP = 0.5, no HCl reaction.
				2.0-3.0': Gravel. Granular, strong brown (7.5 YR 5/6) loose, very poorly sorted,
				silty, subrounded, slightly cohesive, much fine and medium sand.
				3.0-4.0': Silt. Brown (7.5 YR 5/2) slight HCl reaction, HP = 0.7, trace matrix
				supported, pebbles, well rounded, variable composition, saturated.
				4.0-5.0': Gravel. Granular as 2 to 3.
55	60	5	35-10,000/	0-1.0': Silt. Yellowish red (5 YR 4/6) HP = 0.0 very wet, matrix supported
			0-0	gravel, slough?
				1.0-2.0': Silt/Clay. Silt reddish brown (5 YR 4/4) HP = 0.5, moderate HCl
				reaction. Clay reddish brown (7.5 YR 4/4) platy and plastic, strong HCl
				reaction. HP = 1.25, present in approximately equal amounts.
				2.0-3.0': Sand. Coarse, brown (7.5 YR 4/4) well sorted, loose, trace medium
				sand, some granular gravel.
				3.0-4.0': Sand and Gravel. Dusky red (2.5 YR 3/2) coarse to fine sand, with
				abundant granular and pebble gravel. Gravel, subangular to subrounded,
				variable composition, loose.
				4.0-5.0': Sand. Coarse to medium, reddish brown (5 YR 4/3) well sorted, loose,
				trace pebbles, gravel.
60	65	5	2000-	0-0.5': Sand. Coarse to medium, as above.
			>10,000/	0.5-2.5': Sand and Gravel. Brown (7.5 YR 4/4) loose. Coarse to mediumd sand
			0-0.5	matrix with abundant subangluar to subrounded pebble and granule
				gravel.
				2.5-5.0': Sand. Medium to coarse, brown (7.5 YR 4/3) loose to much
				granular gravel, coarse sand and fine sand, some well rounded pebble gravel
				of variable composition.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	Time/Hydraulic Pressure or Blows per 6 Inches	Sample/Core Description
65	70	5	700->10,000	0-3.5': Sand and Gravel. Dark reddish brown (5 YR 3/3) loose, saturated,
			0-0	granular gravel, with some pebble gravel, trace silt, gravel subrounded to
				well rounded variable composition.
				3.5-5.0': Sand. Medium to coarse, brown (7.5 YR 5/4) some to much pebble
				gravel. Loose and some to much coarse sand.
70	75	5	500->10,000	0-2.5': Sand. As above.
			0-0.5	2.5-3.0': Sand and Gravel. Sand as above with abundant granular and
				pebble gravel of variable composition, subangular to subrounded.
				3.0-5.0': Gravel. With sand, reddish brown (5 YR 4/3) subangular to
				angular, variable composition, gravel including concrete fragments, strong
				HCl reaction. Loose and dry, contains abundant dry clay fragments, crumbly
				clasts, sand medium to fine grained, loose. Much fragments, dense and
				lamented with calcareous cement, strong HCl reaction.
75	80	5	1000-5500/	0-1.5': Sand. Medium to fine, dark reddish brown (5 YR 3/4) some coarse
			0-0.1	sand, loose and saturated.
				1.5-3.5': Sand. Medium to coarse, dark brown (7.5 YR 3/2) loose, some
				granular gravel, more abundant at base.
				3.5-5.0': Sand. Coarse, dark reddish gray (5 YR 4/2) much granular
				gravel.
80	85	5	1000-4000/	0-1.0': Sand. Coarse, as above, with trace well rounded pebbles.
			0.0	1.0-2.0': Sand. Medium to coarse, brown (7.5 YR 5/3) loose, some to much
				fine sand.
				2.0-5.0': Silt. With clay inclusions. Silt, reddish brown (2.5 YR 5/3) moderate
				HCl reaction, HP = 2.0, very clayey. Clay, red (2.5 YR 4/6) strong HCl reaction,
				HP = 2.1 platy and plastic.
85	90	5	2.5-10/0.0	0-5.0': Silt. With clay inclusions, as above, clay layers horizontally
				stratified, inclusions from 1.5 to 2.5 feet.
90	95	5	275-80/0.0	0-5.0': Silt. As above with clay inclusions in lowest 0.5 feet.
95	100	5	2-9/0.0	0-5.0': Silt. As above.
100	105	5	2-1,000/0.0	0-1.0': Silt. As above.
				1.0-5.0': Sand. Very fine, silt, reddish brown (7.5 YR 5/4) very well sorted, loose
				to slightly dense.

0	5	5	-0.45- -0.5/	0-1.0' Silt/Topsoil/Dust: Yellowish brown (10 YR 5/4), from 0-0.4 glass and rocks,
			1.4-2.22	silt is grainy to powdery, loose, dry, no odor.
				1.0-5.0' Sand: Dark yellowish brown (10 YR 4/6), very fine to fine, predominately
				fine grain, trace medium to coarse, trace silt, loose, somewhat sorted, trace gravel
				to 1"subround to subangular, moist, no odor.
5	10	5	-0.52-19.25/	0-1.5' Slough.
			1.52-15.23	1.5-3.0' Sand: As above.
				3.0-5.0' Sand: Brown (7.5 YR 5/3), fine to medium grain, trace very fine to trace
				coarse and very coarse, poorly sorted, trace gravel to 2" subround to subangular,
				loose, dry to moist, no odor.
10	15	5.0	2.87-3.86/	0-1.0' Slough.
			1.76-3.89	1.0-2.0' Sand: As a above, fine to medium grain.
				2.0-5.0' Sand: Light reddish brown (5 YR 6/3), fine grain, trace medium, well
				sorted, trace gravel to 1/2" subround to subangular, loose, moist, no odor.
15	20	5	2.71-6.59/	0-5.0' Slough: Organics pulverized sand and gravel to powder, gravel up to 2"
			5.49-16.42	subround to subangular, loose, dry, no odor, mixture of units above.
20	25	--	--	No recovery.
25	30	5	5.62-16.88/	0-1.0' Sand: Brown (7.5 YR 5/4), very fine grain, trace fine to medium, well sorted,
			5.11-28.64	loose, moist, no odor.
				1-3' Silt/Sand: Light brown (7.5 YR 6/4), silt, grainy, except for smooth nodules/
				layers up to 2" thick , brown (10 YR 5/3), sand very fine grainy, borderline with
				grainy silt, very well sorted, loose, no odor.
				3.0-5.0' Silt/Sand: Light brown (7.5 YR 6/2), grainy to very fine grain borderline
				with trace medium to very coarse, trace gravel up to 2" subround to subangular
				layer from 3-3.4' of predominately fine grain sand, well sorted with trace medium
				to coarse 0-0.5" silt/sand, as above.

Prepared by Paul Lenaker/Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
30	35	5	5.65-14.11/	0.5-5.0' Sand/Silt: Light brown (7.5 YR 6/3), silt grainy to very fine sand borderline,
			8.38-18.88	very well sorted, loose, dry to moist, no odor at 4.8-5.0', silt, brown (7.5 YR 5/3)
				finely laminated/varved smooth, crumbly, dry, no odor also clay laminate up to
				1/2" thick, yellowish red (5 YR 4/6), platy to fissile in appearance but cohesive and
				plastic when worked overall, dry, moist, no odor.
35	40	5	2.67-17.45/	0-4.0' Silt: Brown (7.5 YR 5/4), smooth to somewhat grainy, vesicles, some black
			8.02-59.80	staining, crumbly, uniform, no odor, moist, looks like may have been laminated/
				layer from color appearance.
				4.0-5.0' Sand: Light brown (7.5 YR 6/4), fine grain, trace medium to very coarse,
				trace gavel to 1/2" round to subangular, coarsen below section slightly, somewhat
				sorted, loose, moist, no odor.
40	45	5	5.42-8.65/	0-3.0' Silty Sand: Brown (7.5 YR 4/4), sand fine grain, trace very fine to very coarse,
			6.05-20.84	somewhat loose, poorly sorted, trace gravel up to 1" subround to subangular,
				moist to wet, odor.
				3.0-4.0' Silty Sand: As above, no trace gravel.
				4.0-5.0' Silt/Clay: Laminate, varved, silt smooth brown (7.5 YR 5/4), crumbly, clay
				yellowish red (5 YR 4/6), fissile/platy in appearance, somewhat cohesive, slight
				plastic, moist, no odor.
45	50	5	-0.83-5.69/	0-2.0' Silty Sand: Brown (10 YR 4/3) as above, with gravel contact with section
			2.99-22.83	below.
				2.0-5.0' Clayey Silt: Brown (7.5 YR 5/4), smooth to grainy in places, somewhat
				crumbly to somewhat cohesive dependant on clay contact, some orange staining,
				through (< mm's) laminate of clay in places from 2-2.4' clay layers more abundant,
				wet, no odor.
50	55	5	-0.88-2.63/	0-5.0' Clayey Silt: As above becoming more stick down section trace pockets/
			3.78-16.72	lenses of very fine to fine sand up to mm's in thickness from 3.0-4.0 becomes
				more clay rich, brown (7.5 YR 5/3) with more cohesive/plastic texture and trace
				fine to medium sand mixed in.
55	60	5	0.78-16.77/	0-0.5' Silt: Brown (7.5 YR 5/3), clayey, sticky and cohesive, trace to little sand, wet,
			2.07-78.23	no odor.
				0.5-2.5' Sand: Brown (7.5 YR 5/4), fine grain, trace to little very fine to coarse,
				poorly sorted, silty trace gravel to 1" subround to subangular, somewhat loose,
				wet, no odor.
				2.5-5.0' Sand: Light brown (7.5 YR 6/4), fine grain, sorted, trace very fine to medium,
				trace gravel to 1", subround to subangular, loose, moist to wet, no odor at 4.0,
				includes more gravel to 2" subround to subangular and trace very fine to very
				coarse sand, loose, moist to wet, no odor.

Boring/Well GM-30A

Prepared by Paul Lenaker/Andy Mumpy

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	PID/FID (ppm)	Sample/Core Description
60	65	5	13.35-23.2/	0-0.5' Sand: As above.
			24.01-105	0.5-2.0' Silty Sand: Light brown (7.5 YR 6/4), sand very fine to fine grain,
				predominately fine grain, somewhat sorted trace medium grain, trace to little
				clumps of nodules of sandy silt, discolored black/blue/red, crumbly up to 1.5"
				thick, loose, dry to moist, no odor, grades over 0.5' into section below.
				2.0-5.0' Sand: Light brown (7.5 YR 6/3) fine grain, trace very fine to coarse, trace
				gravel to 1/2" subround to subangular, grades at 4.5' into predominately fine
				to medium grain, loose, moist, no odor, at 3.5 includes little silt in matrix.
65	70	5	5.29-7.76/	0-2.5' Sand: Fine to medium grain, predominately fine grain, trace coarse, trace
			7.13-13.74	gravel to 3" angular to subround, loose, sorted, some clay/layers of sandy silt,
				discolored as above, grades into section below, moist, no odor.
				2.5-5.0' Sand: As above, predominately fine grain trace to little very fine to medium,
				trace gravel to 1/2" subround to subangular, loose, moist, no odor.
70	75	5	6.34-11.55/	0-3.0' Sand: Light brown (7.5 YR 6/3), fine grain, some very fine grain, trace medium
			6.86-13.17	to very coarse, trace gravel to 1.5" subround to subangular, loose, somewhat
				sorted, trace silt, moist to wet, no odor.
				3.0-3.5' Sand: Color as above, very fine to fine grain, moderately sorted, loose
				trace medium to coarse, moist to wet, no odor.
				3.5-4.5' Sand: Color as above, medium grain, little coarse, trace very fine, sorted,
				trace gravel to 1" subround to subangular, loose, moist to wet, no odor.
				4.5-5.0' Sand: Very fine to fine grain, as above.
75	80	5	0.74-3.76/	0-0.5' Sand: As above, very fine to fine grain.
			82.12-11.53	0.5-3.0' Sand: Brown (7.5 YR 4/3), fine to medium grain, trace very fine to very
				coarse, trace gravel to 1" subround to subangular, poorly sorted, loose, silt,
				seam 6"thick from 2.0-2.6, brown (7.5 YR 4/4) with clay yellowish red (5 YR 4/6)
				layer (1") silt is smooth to crumbly, clay is fissile/platy in appearance and cohesive
				and plant when working, wet, slight odor.
				3.0-4.5' Sand: Brown (7.5 YR 5/4), fine grain, somewhat well sorted, trace medium
				to coarse, possible little silt but could be from side of core barrel, gravel up to 1"
				subround to subangular but only from 4.2-4.5, loose, wet to saturated, slight to
				no odor.
				4.5-5.0' Silt: Brown (7.5 YR 4/3), smooth, crumbly, trace clay layers as above, wet,
				slight to some odor, HP approximately 3.0, somewhat firm.
80	83	3	1.14-3.69/	0-1.5' Silt: As above, trace blackish/gray staining.
			1.26-533	1.5-3.0' Sand: Brown (7.5 YR 5/4), very fine to fine grain, well sorted, trace medium
				to coarse, trace to little silt in matrix, somewhat loose, wet to saturated, slight
				odor.

				from 2 to 3 feet, several approximately 1 inch thick very fine sandy silt lesnes,
				color as above.
35	40	5	4.5-7.5/--	Sand. Very fine silty, red brown (2.5 YR 4/3) well sorted, medium dense, wet to
				saturated in bottom.
40	45	5	4.5-10/--	Sand. Very fine silty, as above, saturated.
45	50	5	8-9/bkg=8	0-2.0': Silt. Very clayey in part. Dusty red (10 YR 3/2) medium stiff (1.75) slightly
				plastic to moderate plastic, where clayey, variable very fine sand throughout.
				2.0-2.5': Sand. Red brown (2.5 YR 4/4) very fine to silty, saturated, medium
				dense, well sorted.
				2.5-5.0': Silt. Trace to some clay (variable), trace very fine sand, stiff to very
				stiff (2.5 to 3.5) color mottled in lower 2 feet, predominantly dusty red (10 YR 3/2)
				with very dusty red (10 R 2.5/2).
50	55	5	8/out	0-1.0': Silt. As above.

Sample/Core Log (Cont.d)

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/PID	Sample/Core Description
				1.0-5.0': Silt and Clay. Silt dark red grey (5 YR 4/2) trace very coarse sand, hard,
				some very fine to fine sand lenses interspersed throughout. Clay dark red
				brown (2.5 YR 3/4) very stiff to hard, nonplastic, platy to block, clay lenses and
				inclusions 1 to 2.5 inch thick.
55	60	5	8=bkg/--	Silt. Dark red grey (5 YR 4/2) medium stiff (2 to 2.5 feet) with clay inclusions at 0-1.5
				and 4.5 feet, trace to some clay insult matrix. At 2.5 to 3 feet silt with very fine sand,
				saturated, soft clay, dark red brown (2.5 YR 3/4) fissile, stiff, nonplastic.
60	65	5	8-9/--	0-4.5': Silt. As above, with minor clay inclusions, clay, as above.
				4.5-5.0': Silt. Dark red brown (5 YR 3/2) very stiff, homogenous.
65	70		8=bkg/--	Silt. Dark red grey (2.5 YR 3/1) soft to medium stiff (1 to 2.5) trace clay, trace very
				fine sand, clay lenses at 0.5 feet, clay inclusions at 1.5 to 2 foot and 3 to 4 feet,
				clay very dusty red (2.5 YR 2.5/2) fissile, very stiff to hard, nonplastic.
70	75	5	2-10/--	Silt. As above, clay inclusion from 0 to 2 feet, and at 3.5 feet, clay, hard, dry, non
				plastic, dark red brown (2.5 YR 3/4).
75	80	5	6=bkg/--	Silt. Clay inclusions form 0 to 1.5 and 4 to 5 feet. silt contains variable very fine
				and fine sand, trace clay, color is mottled from 2 to 5 feet, medium stiff, dark
				black grey (5 B 4/1) and dark red brown (5 YR 3/2) clay, as above.
80	85	5	6/--	0-2.0': Silt. As above.
				2.0-5.0': Silt and Clay. Interbedded, clay, dark red brown (2.5 YR 2.5/4) very hard,
				platy to blocky, some plastic, lenses 1 to 3 inch thick, dry. Silt, dark red brown
				(5 YR 3/2) variable very fine and fine sand, trace clay, very hard and dry where no
				sand, medium stiff where sand is present.
85	90		8=bkg/--	0-2.25': Silt and Clay. Interbeded, silt color as above, trace to with clay,
				moderately plastic where clayee, medium stiff (1.5 to 2) clay, dark red brown
				(5 YR 3/3) fissile, stiff to hard, nonplastic, dry.
				2.25-2.5': Sand. Coarse with medium, some very coarse, trace very fine and fine
				moderate sorting, loose, saturated, very dark grey (3N).
				2.5-5.0': Silt. Some very fine sand, trace clay (variable) grading to very fine silty
				sand towards bottom, saturated, soft to medium stiff.
90	95	5	8-20/--	0-1.5': Sand. Very fine silty to very fine sandy silt, dark red brown (5 YR 3/4)
				soupy, dense, well sorted.

				0.5-2.0': Sand. Dark reddish brown (5 YR 3/3), very fine (silt) as 0 to 0.2, no HCl
				reaction.
				2.0-3.0': Sand. Reddish brown (5 YR 4/4) medium, some to much fine sand, trace
				coarse sand, loose.
				3.0-3.5': Sand. Dark greenish gray (5 Y 3/1) very coarse and granular gravel, loose,
				saturated, trace subangular to subrounded, pebble to cobble gravel.
				3.5-5.0': Sand. Dark reddish brown (5 YR 3/3) very fine, well sorted, crumbly,
				moist, color changes to (5 YR 4/3) lowest 1 foot, top 6 inch contain some black
				staining, (leached with acid).
95	100	5	3-25/NA	0-5.0': Sand. Brown (7.5 YR 4/2), very fine, wet, well sorted, crumbly, strong
				reaction with HCl, loose.
100	105	5	3-45/NA	0-5.0': Sand. Very fine to fine, same color as above, saturated, crumbly, silt reaction
				with HCl, loose.
105	110	5	5-50/NA	0-2.5': Sand. As above, very fine to fine, wet.
				2.5-4.5': Silt. Brown (10 YR 5/3) thin clay lense (2 mm) with black staining, trace
				very fine sand, very moist.
				4.5-5.0': Sand. As above, very fine to fine, 0 to 2.5 feet.
110	115	5	20-100/NA	0-1.0': Sand. As above, very fine to fine.
				1.0-3.0': Sand. Greenish black (5 B6 2.5/1) fine to medium, staining evident, silt
				reaction to HCl, loose, very moist, trace very fine sand.
				3.0-5.0': Sand. Brown (10 YR 5/3) fine to medium, trace very fine, 1 inch silt
				seam with staining, loose, slight reaction to HCl, moist.
115	120	5	3-50/NA	0-3.5': Sand. Brown (7.5 YR 5/3), fine to medium, loose, trace very fine sand, silty,
				slight reaction to HCl, moist, 4 mm clay seams, red brown (5 YR 4/9).
				3.5-3.75': Sand. Dark gray (7.5 YR 4/9), very fine, moderate reaction to HCl.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/PID	Sample/Core Description
0	5	4	3-7/0.3-1.4	0-0.5': Top Soil. Silty sand loam "A Horizon" loose, dry, roots, trace gravel,
				subrounded, very dark brown (10 YR 2/2).
				0.5-1.0': Silt Loam. Trace, (10 percent), pea gravel, yellow brown (10 YR 5/6),
				dry, loose, moderately sorted.
				1.0-3.5': Sand. Yellow brown (10 YR 5/8) medium, some fine and coarse, trace
				very coarse, trace very fine and silt, some gravel ¼ to 1 inch, subround to
				subangular, loose, slightly moist, moderately to poorly sorted.
				3.5-4.0': Sand. Brown (10 YR 4/3) medium to coarse, some very coarse, some
				fine, trace very fine and silt, some gravel 1/8 to 1.5 inch, subrounded, poorly sorted,
				loose, dry.
5	10	5	3-15/0.5-1.1	0-2.5': Sand. Dark yellow brown (10 YR 4/4) at top grading to brown (10 YR 4/3)
				at bottom, fines downward through section, at top medium with coarse trace
				very coarse and fine, some gravel ¼ to 2 inch, subrounded, moist, loose, poorly
				sorted. At bottom, fine with medium , some very fine and silt, trace very
				coarse, trace (10 percent) gravel ¼ to 1 inch, subrounded, poorly sorted.
				2.5-5.0': Sand and Gravel. Red brown (5 YR 4/4) sand, coarse and very coarse
				trace medium and fine, gravel ¼ to 2.5 inch subrounded to subangular, very
				poorly sorted, loose, wet to very moist.
10	15	5	3-6/.2-1.7	0-1.5': Sand and Gravel. As above.
				1.5-3.0': Sand. Strong brown (7.5 YR 4/6) medium, some coarse, some fine,
				trace very fine trace very coarse, some gravel ¼ to 1 inch, subrounded, very poorly
				sorted, slightly moist, loose.
				3.0-5.0': Sand. Red brown (2.5 YR 4/3) medium, some coarse, some fine, trace
				very coarse and very fine, trace gravel ½ to 1 inch, subrounded, very poorly

				sorted, slightly moist, loose.
15	20	4	3.5-5/0-0.6	0-1.0': Sand. Fine to medium, trace coarse and very coarse and very fine, trace
				gravel 1/8 to 1 inch, subrounded to subangular, loose, slightly moist, poorly
				sorted, brown (7.5 YR 4/3).
				1.0-2.5': Sand. Strong brown (7.5 YR 4/6) medium with coarse, some very coarse,
				trace fine and very fine, some gravel, poorly sorted loose, slightly moist.
				2.5-4.0': Sand and Gravel. Dark brown (7.5 YR 3/4) fine to very coarse, with
				very fine and silt, gravel ¼ to 3.5 inch, angular to subrounded, very poorly sorted,
				loose, slightly moist.
20	25	5	6-12/.9-3.7	0-1.0': Sand and Gravel. As above.
				1.0-5.0': Sand. Reddish brown (5 YR 5/4) very fine with silt, well sorted, slightly moist,
				loose to medium dense. At 2.5 feet a 1/8 inch clay lense, some silt interspersed,
				red brown (2.5 YR 4/3) soft, slightly plastic.
25	27	4.5	5-50/8-27.5	4.5 feet of slough, 5 feet of very fine sand, as above. Ran casing and cleaned out
				hole.
27	30		4-15/0-4.5	Sand. Light red brown (2.5 YR 6/4) very fine, some silt, moderately well sorted,
				loose to medium dense, slightly moist.
30	35	5	5-25/.8-5.5	Sand. As above, medium dense. At 2 feet at 1.5 inch thick zone of finely laminated
				sand as above, and silt, silt is dark red brown (5 YR 3/2) trace very fine sand in
				silt, dense, slight moist.
35	40	5	3 (bkg)/.3-.6	Silt. Red brown (5 YR 4/3), trace clay in matrix, trace clay inclusions, soft, plastic,
				¼ inch in diameter, trace pea gravel (1 percent), dark red (2.5 YR 3/6) silt is
				medium stiff (1.5 in HP) very moist.
40	45	5	3/.2-.3	Silt. As above.
45	50	5	3.5-4.5/0-.7	0-2.5': Silt. As above, at 2.5 feet a 3 inch clay seam, weak red (10 R 4/4) strongly
				effervescent, very stiff to hard (3 to>4 in HP) fissile, slightly plastic.
				2.5-5.0': Silt. Dark red brown (5 YR 3/3) trace clay, trace very fine to fine sand,
				medium stiff (2.0), trace clay inclusions in upper 1 foot, silt is very moist to wet
				in part.
50	55	5	3-7/.3-3.9	Silt. As above, several small pockets of sand interspreaded throughout, dark
				yellow brown (10 YR 3/4) silty with fine and medium sand grains, wet. Trace clay

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/PID	Sample/Core Description
				inclusions approximately ¼ inch thick interspersed throughout, plastic, effervescent,
				soft.
55	60	5	25-1,750/	0-1.5': Silt. Very dark brown (7.5 YR 2.5/2) medium stiff (1.5) well sorted,
			0-1.8	very moist, clay lenses 1/8 to 1.5 inch thick interspersed throughout, top clay lense,
				red brown (2.5 YR 4/3) fissile, medium stiff, plastic, strongly effervescent, lower clay
				lenses, dark brown (7.5 YR 3/4), fissile, moderate plastic, effervescent.
				1.5-3.0': Silt. Dark red brown (5 YR 3/3) soft (.5), with very fine and fine sand,
				moist to very moist. Several thin clay lenses, red brown (2.5 YR 4/3) fissile soft,
				plastic.
				3.0-3.5': Sand. Red brown (5 YR 4/3) medium grain with fine, some silt, trace
				clay, poorly sorted, medium dense, moist to very moist.
				3.5-5.0': Sand. Brown (7.5 YR 5/4) medium, some coarse, trace fine, trace ????
				moderate well sorted, loose to medium dense, moist.
60	65	5	200-	0-2.0': Sand. As above.
			>10,000/	2.0-4.5': Sand. Light brown (7.5 YR 6/3), fine to medium, some very fine and coarse
			.3-1.4	trace silt, trace (10 percent) gravel, 1/8 to ½ inch subround, moderate.
				4.5-5.0': Sand. Red brown (5 YR 4/4) fine to coarse, some very fine and very
				coarse, trace silt, some gravel 1/8 to ¼ inch subrounded to subangular, saturated,
				poor sorting, loose to medium dense, dry to slightly moist, sand is slightly
				effervescent, collect GM-44/64 for microbial analysis.
65	70	4	5,000-	0-2.0': Sand. Red brown (5 YR 4/4) medium, some coarse and fine, trace very
			>10,000/	fine, trace fine gravel, medium sorting, wet, likely due to drilling, medium dense.
			0.2-1.0	2.0-3.5': Sand. With gravel, red brown (5 YR 5/4) sand: coarse with medium and
				very coarse, trace fine and very fine, poorly sorted, saturated, gravel 1/8 to 2.5 inch,
				subrounded.
				3.5-4.0': Sand. Strong brown (7.5 YR 5/6) medium with coarse, some fine, trace
				very coarse, very fine and silt poorly sorted, very moist, trace gravel 1/8 inch,
				subrounded.
70	75	5	3,500-	0-3.0': Sand. As above, but some gravel from 2 to 3 feet, gravel ¼ to 2 inch,
			>10,000/	subrounded, sand slightly moist.

Boring/Well GM-45A

Prepared by Andy Mumpy/Paul Lenaker

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVM/OVA (ppm)	Sample/Core Description
				damp, no odor.
				1.0-5.0' Sand: Reddish brown (5 YR 4/4), predominately fine, coarse 1.0-2.0'
				predominately fine to medium, little very fine to very coarse throughout, some silt
				in places, poorly sorted, little gravel subangular to subround to 2", loose, dry, no
				odor.
20	25	5	1.12-170/	0-3.0' Sand: Brown (7.5 YR 5/3), predominately fine, trace very fine, medium to
			5.26-30.14	very coarse, trace gravel angular to subround to 1", loose, damp to dry,
				moderately sorted, no odor.
				3.0-5.0' Sand: As above, but slightly coarse and more poorly sorted, predominately
				fine to medium, some very fine, coarse, very coarse, trace silt, 2" thick clay layer
				at 4.7 yellowish red (5 YR 4/6), plastic, cohesive, firm to hard, sand/gravel
				inclusions in clay probably from drilling, overal loose, dry, no odor.
25	30	5	1.61-22.3/	0-1.0' Sand: As above in 23.0-25.0 with 1" thick clay layers as above, out of
			9-33	place from drilling, poorly sorted, very fine to very coarse sand with some fine
				subangular to subround gravel to 0.5", loose, poorly sorted, dry, no odor.
				1.0-5.0' Sand: Strong brown (7.5 YR 5/6), very fine (very very fine approaching
				very grainy silt), very well sorted, trace black staining, uniform, loose, damp, silty,
				powdery 1.0-1.5, no odor.
30	35	5	5.48-14.3/	0-3.5' Sand: As above.
			5-21	3.5-4.8' Silt: Pale brown (10 YR 6/3), powdery, uniform, well sorted, loose, dry,
				no odor.
				4.8-5.0' Sand: As above in 3.0-33.5.
35	40	5	5.49-99/	0-5.0' Sand: As above, strong brown as above, very fine (very very fine), uniform,
			5.41-6.52	well sorted, loose, no odor, dry.
40	45	0		No recovery.
45	50	3	1.11-426/	0-2.0' Sand: As above, sharp contact with unit below.
			3.13-6.53	2.0-3.0' Silt: Reddish brown (5 YR 4/4), grainy to smooth, clay vaving, some clay
				layers mm's thick, trace black staining, clay yellowish red (5 YR 4/6), plastic, fissle
				appearance, overall somewhat cohesive, wet, no odor.
50	55	0	--	No recovery.
55	60	5	1.34-9.01/	0-3.0' Silt/Clay Interbeds: Silt is reddish brown (5 YR 4/4), clay is yellowish red
			14.59-54	(5 YR 4/6), silt smooth, clay layers varved to 2" thick, plastic, very hard (HP >4.0),
				clay appears fissle on broken surface, overall somewhat cohesive, firm, moist,
				no odor.
				3.0-5.0' Silt: Brown (7.5 YR 4/4), grainy to smooth, trace yellow red clay varving,
				somewhat loose, somewhat cohesive, uniform, wet, trace black staining, no odor.

Sample/Core Log (continued)

Boring/Well GM-45A

Prepared by Andy Mumpy/Paul Lenaker

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVM/OVA (ppm)	Sample/Core Description
60	65	5	-.17-0.57/	0-5.0' Silt with clay interbeds, silt is brown (7.5 YR 4/4), two different clay colors:
			431-14300	dark brown (7.5 YR 3/4) and yellowish red (5 YR 4/6) but most of it is yellowish red,
				smooth silt matrix with somewhat sporatic clay interbeds, little black and gray
				staining in silt matrix, clay layers varved to 2" thick, yellow red clay is plastic, hard,
				firm, with fissile appearance, brown clay is very hard and somewhat crumbly to
				somewhat plastic, more clay beds 2.0-3.0', overall somewhat cohesive, moist to
				wet, odor.
65	70	5	0.78-1.35/	0-1.5' Silt: Brown (7.5 YR 4/4), smooth to grainy, trace very fine sand, some
			312-2405	yellow red clay varving as a above, but out of place, broken silt is crumbly to
				loose, distorted from drilling, trace black staining, dry, no odor.
				1.5-1.9' Sand: Light brown (7.5 YR 6/4), predominately fine grain, trace very fine,
				trace medium to coarse, trace gravel subangular to subround to 0.7", moderately
				sorted, loose, damp, no odor.
				1.9-2.5' Sand: With some gravel, light brown (7.5 YR 6/3), sand very fine to very
				coarse, predominately fine, some gravel subangular to subround to 1.5",
				poorly sorted, loose, damp, no odor.
				2.5-3.2' Sand: Light brown (7.5 YR 6/4), predominately fine grain, trace medium
				to coarse, trace subangular to subround fine gravel, <0.5" grainy silt layer crumbly
				and dry at 2.5', loose, damp, dry, slight fining toward 3.2' where very fine to
				fine sand, moderately to well sorted, no odor.
				3.2-3.4' Silt: Brown (7.5 YR 4/4), grainy to smooth, then silt seam, loose, dry,
				crumbly, trace black staining, no odor.
				3.4-3.6' Silt with Sand: Gray (7.5 YR 6/1), silt grainy, sand very fine, trace
				fine gravel angular to subround, powdery mixture, very dry, loose, no odor.
				3.6-5.0' Sand: Brown (7.5 YR 5/4), fine grain, very well sorted, little angular
				gravel and some silt at 5.0' probably slough, loose, damp, no odor.
70	75	5	0.15-1.51/	0-1.0' Sandy Silt: Brown (7.5 YR 5/4), smooth to grainy silt, some very fine to fine
			5077-93100	sand, trace medium, trace black staining, loose and crumbly, moist, slight odor.
				1.0-2.0' Sand: Light brown(7.5 YR 4/4), very fine grain, some fine, trace medium
				to very coarse, moderately sorted, trace angular to subround gravel to 2", loose,
				damp, no odor.
				2.0-3.5' Sand: Light brown (7.5 YR 6/4), predominately fine grain, some very
				fine, trace very coarse, well sorted, loose, damp, no odor.
				3.5-4.0' Sandy Silt: As above in 70.0-71.0'.
				4.0-5.0' Sand: As above in 71.0-72.0.
75	79	4	0.66-5.71/	0-1.5' Sandy Silt: As above, grainy to smooth silt with some very fine to fine
			7300-16200	sand, loose, damp, crumbly, no odor, as above in 70-71 and 73.5-74.0.

Sample/Core Log (Cont.d)

Boring/Well GM-46 Page 3 of 3

Prepared by Ted Powell and Kevin Daleness

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
60	65	5	6.5-850/	0-1.0': Silt. Sandy, as above.
			0-0.1	1.0-4.0': Silt. Very fine sandy with clay inclusions, reddish brown (5 YR 4/4),
				soft, strong reaction to HCl, 1/8 to 4 inches of clay, slightly plastic, platy, several
				1 inch silt and very fine sand seams.
				4.0-5.0': Sand. Very fine silty, very dense, no reaction to HCl, >4 penotrometer,
				trace clay.
65	70	5	1,200-	0-1.5': Sand. Medium to very coarse and gravel, brown (7.5 YR 5/3), some
			>10,000/0	cement pieces, grain 1/8 to 1.5 inch, wet, strong reaction to HCl, trace silt and
				clay, loose, wet, poorly sorted.
				1.5-2.0': Sand. Medium to very coarse, some gravel, ¼ to ½ inch, loose, wet,
				silt, reaction to HCl, trace silt.
				2.0-5.0': Sand. Brown (7.5 YR 5/4) medium to coarse, some fine and very coarse,
				trace silt, loose, wet, no reaction to HCl.
70	75	5	>10,000/	0-6.0": Sand. Medium to coarse, as above.
				6"-3.0': Sand and Gravel. Fine to very coarse, some clay, trace silt, loose, wet, slight
				reaction to HCl.
				3.0-4.5': Sand. Yellowish brown (10 YR 5/4) fine to very coarse sand, some
				gravel, loose, wet, trace silt and clay.
				4.5-5.0': Silt. Reddish brown (5 YR 4/4) trace very fine sand and clay, dense, 3.5 =
				penotrometric, blocky, trace clay inclusions (¼ inch) reddish brown (2.5 YR 4/4)
				weak reaction to HCl, platy, moderately plastic, 1.5 = pentameter.
				EOB 75 feet, set screen 65 to 75.

Sample/Core Log

Boring/Well GM-47 Project/No. Ford/Kingsford WI000675.0001 Page 1 of 5

Site Location Kingsford, Michigan

Drilling Started 8/17/98 16:30 Drilling Completed 8/18/98 9:20

Total Depth Drilled 85 Feet Hole Diameter 6 inches Type of Sample/ Coring Device Rotasonic Core barrel

Length and Diameter of Coring Device 10' x 4" Sampling Interval Continuous feet

Land-Surface Elev. 1126.11 feet [X] Surveyed [ ] Estimated Datum Mean Sea Leel

Drilling Fluid Used None Drilling Method Rotasonic

Drilling Contractor Boart Longyear Driller Perry Helper Bryan

Prepared By Ted Powell and Rob Reina Hammer Weight Hammer Drop ins.

Sample/Core Depth (feet below land surface) From	To	Core Recovery (feet)	OVA/OVM	Sample/Core Description
0	5	4.5	2-9/1.4-2.5	0-.25': Sand. Silty, loam "A Horizon", roots, slightly moist, loose, dark
				brown (7.5 YR 4/3).
				.25-1.0': Sand. Brown (7.5YR 5/3) fine with medium and coarse, trace very
				coarse and silt, very poorly sorted, loose, dry, with gravel ¼ to 3 inches,
				subrounded, trace wood.
				1.0-1.25': Sand. Dark grey (5 YR 4/3) very fine with fine, some medium sand and
				silt, trace coarse and very coarse, very poorly sorted, abundant roots, paleosol
				trace fine gravel, loose, dry.
				1.25-2.5': Sand. Color ranges from yellow brown (10 YR 5/6) at top to strong
				brown (7.5 YR 5/6) at bottom, very fine, silty, trace fine and medium, loose, dry,
				poorly sorted, and gravel.
