Footnotes on Page 844

Table R-1. Soil Vapor Monitoring Data, Ford-Kingsford Products Facility, Kingsford, Michigan.

Note:	Methane measurements from Soil Vapor Probe GMSG-123 represent peak values obtained during monitoring. Stabilized methane values of 0 percent by volume were reached between 1 and 5 minutes of monitoring. Monitoring Well GM-24A and Soil Vapor Probe GMSG-116 have submerged well screens. Due to the submerged well screen the methane measured during monitoring is from off gassing of the groundwater and not free-phase vadoze zone methane.
<	Reading is less than value to the right of the "<" sign.
>	Reading is greater than value to the right of the ">" sign.
<=	Reading is less than or equal to value to the right of the "<=" sign.
>=	Reading is greater than or equal to value to the right of the ">=" sign.
(1)	As measured at the Kingsford Airport. Data was obtained from the Midwestern Climate Center.
(2)	Negative value for the pressure reading indicates a vacuum.
(3)	Data represents field measurements obtained using a Landtec Model GA-90 gas meter.
(4)	Data represents field measurements obtained using an Organic Vapor Analyzer (OVA) or a Total Vapor Analyzer (TVA). Negative readings are due to acceptable instrument calibration drift.
(5)	Accuracy of water level measurements in some probes may be affected by the presence of methane gas.
---	Data not available.
% vol	Percent by volume.
CH_4	Methane.
CO_2	Carbon dioxide.
^oF	Degrees Fahrenheit.
ft btc	Feet below top of casing.
in.	Inches.
in. Hg	Inches of mercury.
in. H_2O	Inches of water.
ppmv	Parts per million by volume.
O_2	Oxygen.
T	Trace.

The calculations presented in the worksheets determine the gas composition at selected soil gas monitoring probes in the General Study Area evalute are used to evaluate the biological generation and degradation of methane at these selected probes.

Calculations:

1. The typical atmospheric gas concentrations of Kingsford, Michigan are first determined by averaging soil gas measurements taken when no methane was present.

    Average Concentration = (Concentration at GM-4B on 8/26/99 + Concentration at GM-19 on 8/26/99) / 2

2. The mass of a gas components at times when biological activity is occurring is calculated.

Because biological reactions can generate or consume gas components, and because the laboratory determines gas composition on a % by Volume basis, to accurately calculate the mass of gas components, the calculation must account for either the generation or consumption or gases. This is done by calculating the mass of the various gas components relative to a constant mass of Argon. Argon is an inert gas that is not generated or consumed by biological reactions. The % by volume of Argon in a sample will decrease due to dilution if gas is being biologically generated. Conversely, the % by volume of Argon in a sample will increase due to concentration if gas is being biologically consumed. To normalize the mass of other gases relativeto a constant mass of Argon, the Argon Dilution Ratio is calculated.

Argon Dilution Ratio = % Argon in Sample / % Argon in Normal Atmosphere in Kingsford, Michigan (0.965%)

The normalized mass of the other gas components is then calculated as follows:

Normalized Mass = (% Component in sample / 100) * Density of Component / Argon Dilution Ratio

3. The mass ratio of carbon dioxide to methane is calculated.

    Mass Ratio = normalized mass of carbon dioxide in sample / mass of methane

Normal Atmospheric Air in Kingsford

Density of gases @ 60 degrees F and 1 atm		Formula Weight	
Nitrogen	1.18 g/l	28.02	g/mole of N2
Oxygen	1.35 g/l	32	g/mole of O2
Carbon Dioxide	1.86 g/l	44.01	g/mole of CO2
Argon	1.69 g/l	39.95	g/mole of Ar
Methane	0.68 g/l	16.04	g/mole of CH4
Helium	0.17 g/l	4	g/mole He

	% by Volume on 8/26/98		Average
Gas Component	GMSG-4B	GMSG-19	% by Volume
Nitrogen	77.32	77.25	77.285

1. Enter value directly,...or
2. Calculate by filling in grey cells below. (To restore formulas, hit button below).

Variable* — Data used directly in model.
Value calculated by model. (Don't enter any data).

1. HYDROGEOLOGY

Seepage Velocity*	Vs	106.2	(ft/yr)
or		or	
Hydraulic Conductivity	K	5.7E-03	(cm/sec)
Hydraulic Gradient	I	0.0036	(ft/ft)
Porosity	n	0.2	(-)

2. DISPERSION

Longitudinal Dispersivity*	alpha x	42.7	(ft)
Transverse Dispersivity*	alpha y	4.3	(ft)
Vertical Dispersivity*	alpha z	0.0	(ft)
or		or	
Estimated Plume Length	Lp	4400	(ft)

3. ADSORPTION

Retardation Factor*	R	1.0	(-)
or		or	
Soil Bulk Density	rho	1.7	(kg/l)
Partition Coefficient	Koc	38	(L/kg)
FractionOrganicCarbon	foc	5.7E-5	(-)

4. BIODEGRADATION

1st Order Decay Coeff*	lambda		(per yr)
or		or	
Solute Half-Life	t-half		(year)
or Instantaneous Reaction Model			
Delta Oxygen*	DO	0	(mg/L)
Delta Nitrate*	NO3	0	(mg/L)
Observed Ferrous Iron*	Fe2+	0	(mg/L)
Delta Sulfate*	SO4	0	(mg/L)
Observed Methane*	CH4	0	(mg/L)

5. GENERAL

Modeled Area Length*	4400	(ft)
Modeled Area Width*	1000	(ft)
Simulation Time*	40	(yr)

L, W

115 — or — 0.02

6. SOURCE DATA

Source Thickness in Sat.Zone* 75 (ft)

Source Zones:

Width* (ft)	Conc. (mg/L)*

Data Input Instructions:
1. Enter value directly ...or
2. Calculate by filling in grey cells below. (To restore formulas, hit button below).

Variable* — Data used directly in model.
20 — Value calculated by model. (Don't enter any data).

1. HYDROGEOLOGY

Seepage Velocity*	Vs	8.8	(ft/yr)
or			
Hydraulic Conductivity	K	4.7E-04	(cm/sec)
Hydraulic Gradient	I	0.0036	(ft/ft)
Porosity	n	0.2	(-)

2. DISPERSION

Longitudinal Dispersivity*	alpha x	42.7	(ft)
Transverse Dispersivity*	alpha y	4.3	(ft)
Vertical Dispersivity*	alpha z	0.0	(ft)
or			
Estimated Plume Length	Lp	4400	(ft)

3. ADSORPTION

Retardation Factor*	R	1.0	(-)
or			
Soil Bulk Density	rho	1.7	(kg/l)
Partition Coefficient	Koc	38	(L/kg)
FractionOrganicCarbon	foc	5.7E-5	(-)

4. BIODEGRADATION

1st Order Decay Coeff*	lambda	2.3E-1	(per yr)
or			
Solute Half-Life	t-half	3.00	(year)
or Instantaneous Reaction Model			
Delta Oxygen*	DO	0	(mg/L)
Delta Nitrate*	NO3	5	(mg/L)
Observed Ferrous Iron*	Fe2+	200	(mg/L)
Delta Sulfate*	SO4	20	(mg/L)
Observed Methane*	CH4	200	(mg/L)

5. GENERAL

Modeled Area Length*	4400	(ft)
Modeled Area Width*	1000	(ft)
Simulation Time*	40	(yr)

6. SOURCE DATA

Source Thickness in Sat.Zone* 125 (ft)

Source Zones:

	Width* (ft)	Conc. (mg/L)*
1	100	0
2	150	0
3	500	2500
4	150	0
5	100	0

Source Halflife (see Help):

Infinite	Infinite	(yr)
Inst. React.	1st Order
